# Contribution to Consortium

## Pilot Facilitator

### Coordinate & Scale Pilots

Orchestrate cross-border GenAI pilots across European public administrations. Beta-i acts as facilitator, ensuring collaboration between administrations and technology providers while enabling cross-border reuse and scaling of innovative solutions.

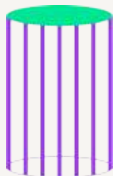

### Agile & User-Centric Approach

Apply agile methods and user-focused design to ensure effective deployment. Pilots are developed in short learning cycles, using agile practices and user-centric design to adapt quickly to real needs.

### Measure & Monitor Progress

Track KPIs through short learning cycles for pilot-specific and program-wide execution. KPIs are tailored to each pilot while also ensuring a common view of progress across the overall program.

### Capture & Share Learnings

Facilitate knowledge sharing across pilots to enable reuse, innovation, and scaling. Insights are systematically captured within and between pilots to maximize learning, innovation, and efficiency.
