STRUCTURAL STEEL MANUFACTURING

QUALITY & RELIABILITY

Complex projects

NAVALIS GROUP is well-known Contractor of shipbuilding, shiprepair and the offshore constructions more than 23 years. The Navalis Group consists of five companies that successfully and efficiently operate in shipyards in Europe. We have extensive experience in fabricating steel structures of any complexity and a wide range of steel thicknesses with stringent quality requirements and strict NDT control. We manufacture as per Norsok, DNV GL, ABS and BV requirements. Health, Safety & Environmental policy Statement is our top priority for Safety and Health of our employee.

Offshore Oil & Gas Constructions

- Production of oil and gas platforms
- Manufacture of substation platforms and supports
- Production of offshore steel equipment structures

Industrial Works

- Production of wind power plant supports
- Building components for quick-mounted buildings
- Production of bridge spans

Shipbuilding Vessels

- Metal Constructions
- Semi-automatic profile cutting line
- Lifting-transportation mechanisms production and repair
- Various technological metal products production and installation

Production capacity

In our production hall we have 2 cranes - 4.9 tons and 10 tons, height up to 4.5 meters to the hook (and gate exit)

The usable area is 1000 square meters. We carry out welding works with 135 and 136 methods, MIG/MAG.

Together with our partners we can weld titanium, various stainless steels (alloys), we can offer pressure vessels and scrubbers.

The possibilities of mechanical processing of products are very wide, various machine tools are available.

Highly qualified Staff

The company's employees are highly skilled in the installation and assembly of metal structures such as ship hulls, bridge spans, fabrication of offshore structures and other large components.

Machining Equipment

Lathes: For machining metal parts, including threading and turning. Milling machines: For machining metal surfaces and creating complex shapes and holes. Cutting machines: For cutting metal into the required sizes and shapes. Grinding machines: For surface finishing of metal parts.

Working area Capability

The working area is equipped with all necessary equipment for timely execution of works. In case of works of higher complexity, our company also uses the working areas of our partners.
