# HISTORY

- Jorio was founded in 1973, we have over 50 years of experience in the mechanical sector and our abilities have increased year on year.
- In 1988 when Mr. Iorio took to leading the company from his father he brought new technology inside Jorio's skills set, the Information technology applied to the working centre allowing a new symbiosis between mechanical side and information technology.

# IDENTITY

- Our goals are to be in the global market and help our customers develop their ideas to become tangible products.
- We want to excel and customise our services, tailoring for the needs of each customer.
- We want to make ourselves visible worldwide by way of excellent business to business communication.

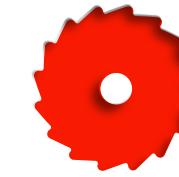

WHAT WE DO

# OUR PRODUCTS AND SERVICES

**PROTOTYPING**

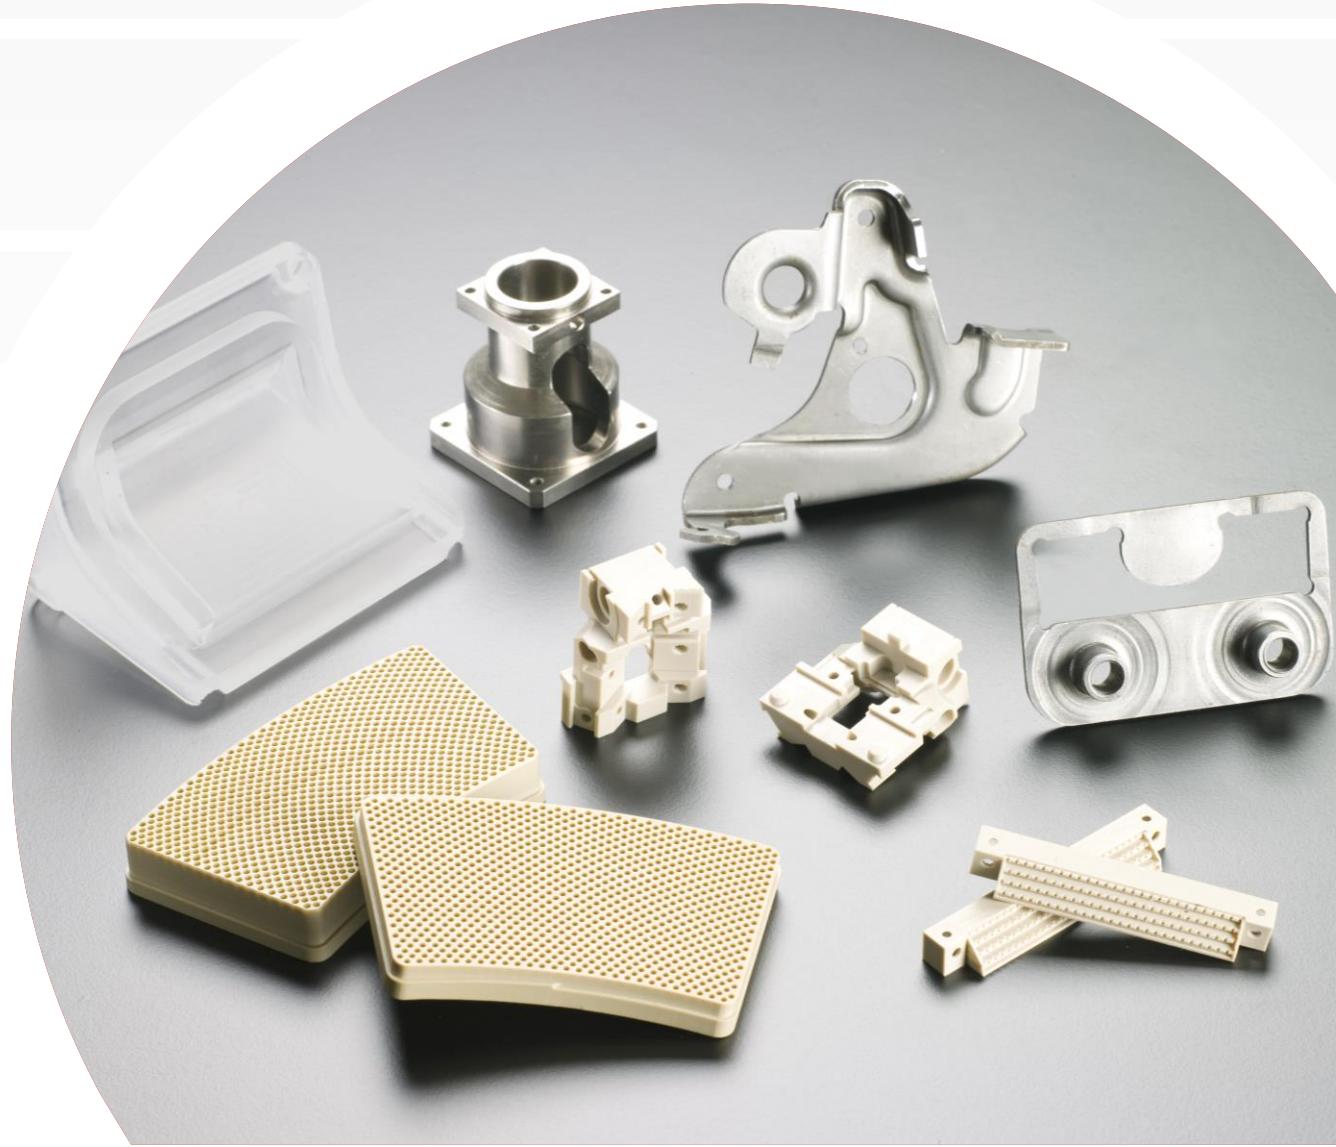

**MECHANICAL  
WORKING**

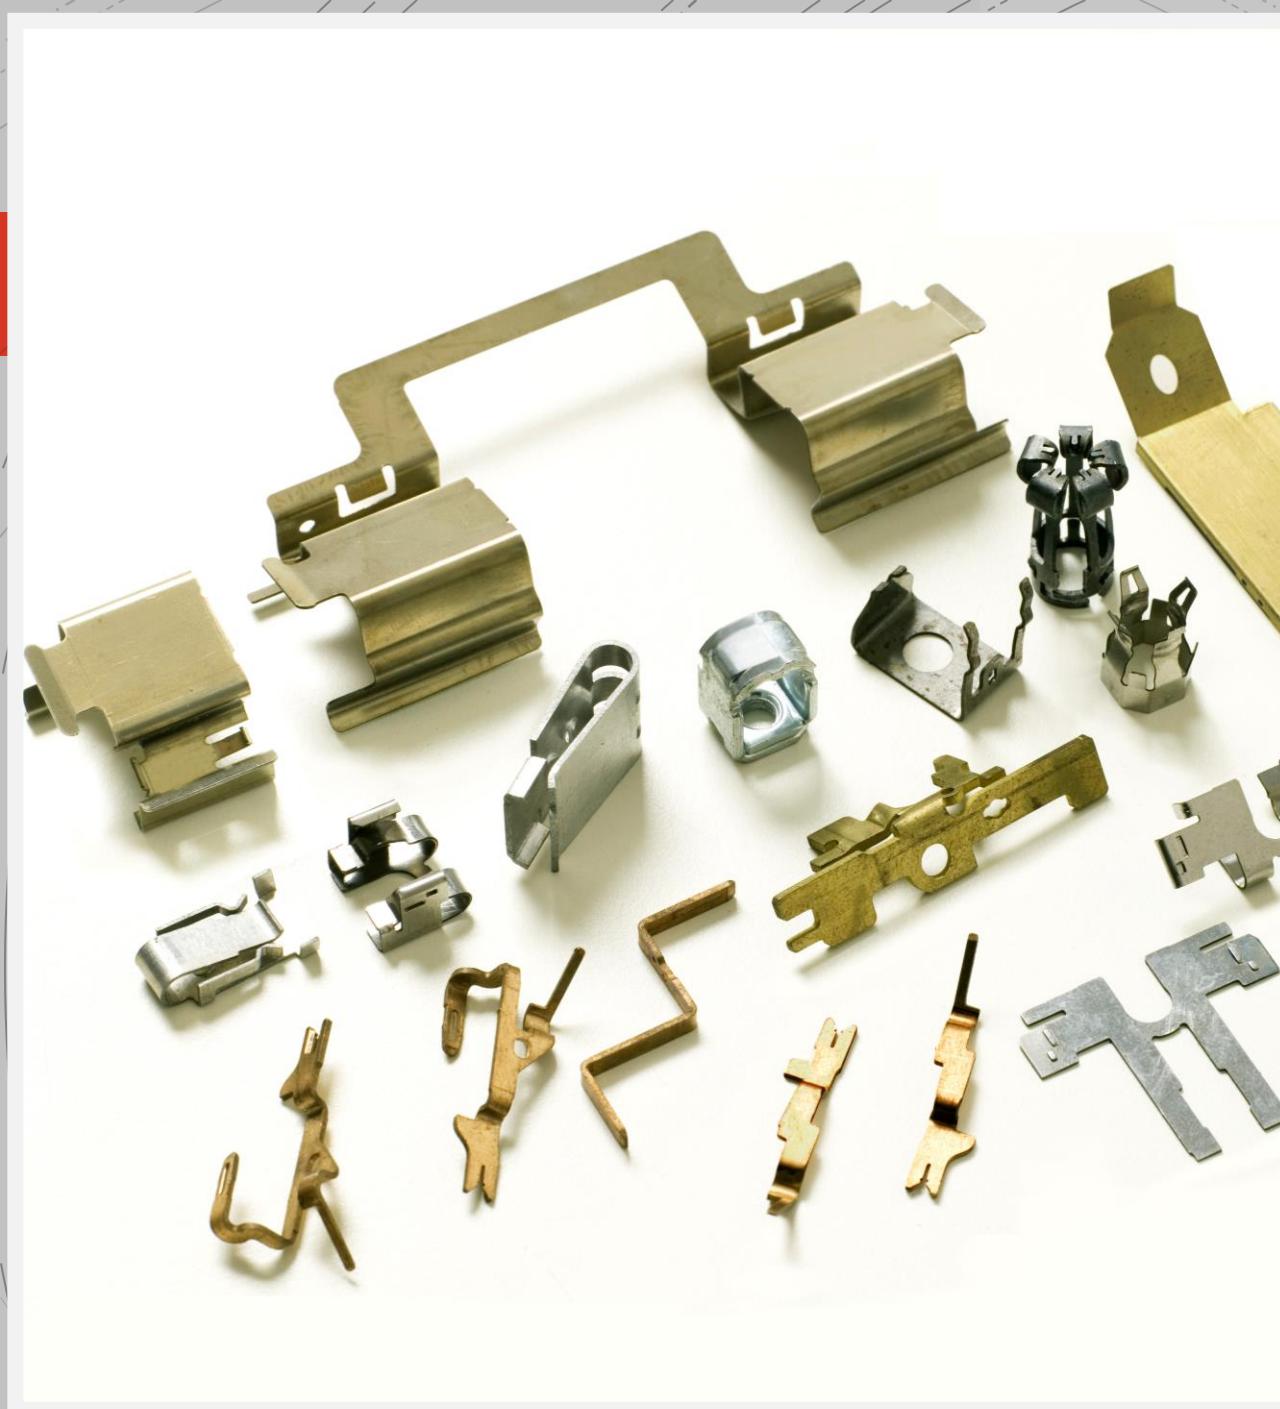

**CHECKING  
MASTER**

**WE PROVIDE ADVANCED  
SOLUTIONS IN THE AREA OF  
“MECHANICAL PROTOTYPING”**

- Our gained experience allows us to combine integrated processes with mechanical engineering and IT technologies creating solutions very quickly.
- When we prototype the products the pieces are obtained from solid milling, with our multi-axis machines, turning, water jet cutting, EDM wire cutting. Sheet metal pieces are obtained by working processes which include bending, shearing and deep drawing.
- We also do reworking on customers' previously moulded products and adapt them for arising needs.

HOW WE DO IT

## DIALOGUE WITH THE CLIENTS

- *support the customer from the initial stage*
- *evaluating in co-design the real current needs and possible necessities.*
- *study the best way to make your finished product.*
- *Analysis and evaluation of the problem with the customer.*
- *Contractors specialised in creating details for product feasibility.*
- *Customise products for every client need.*

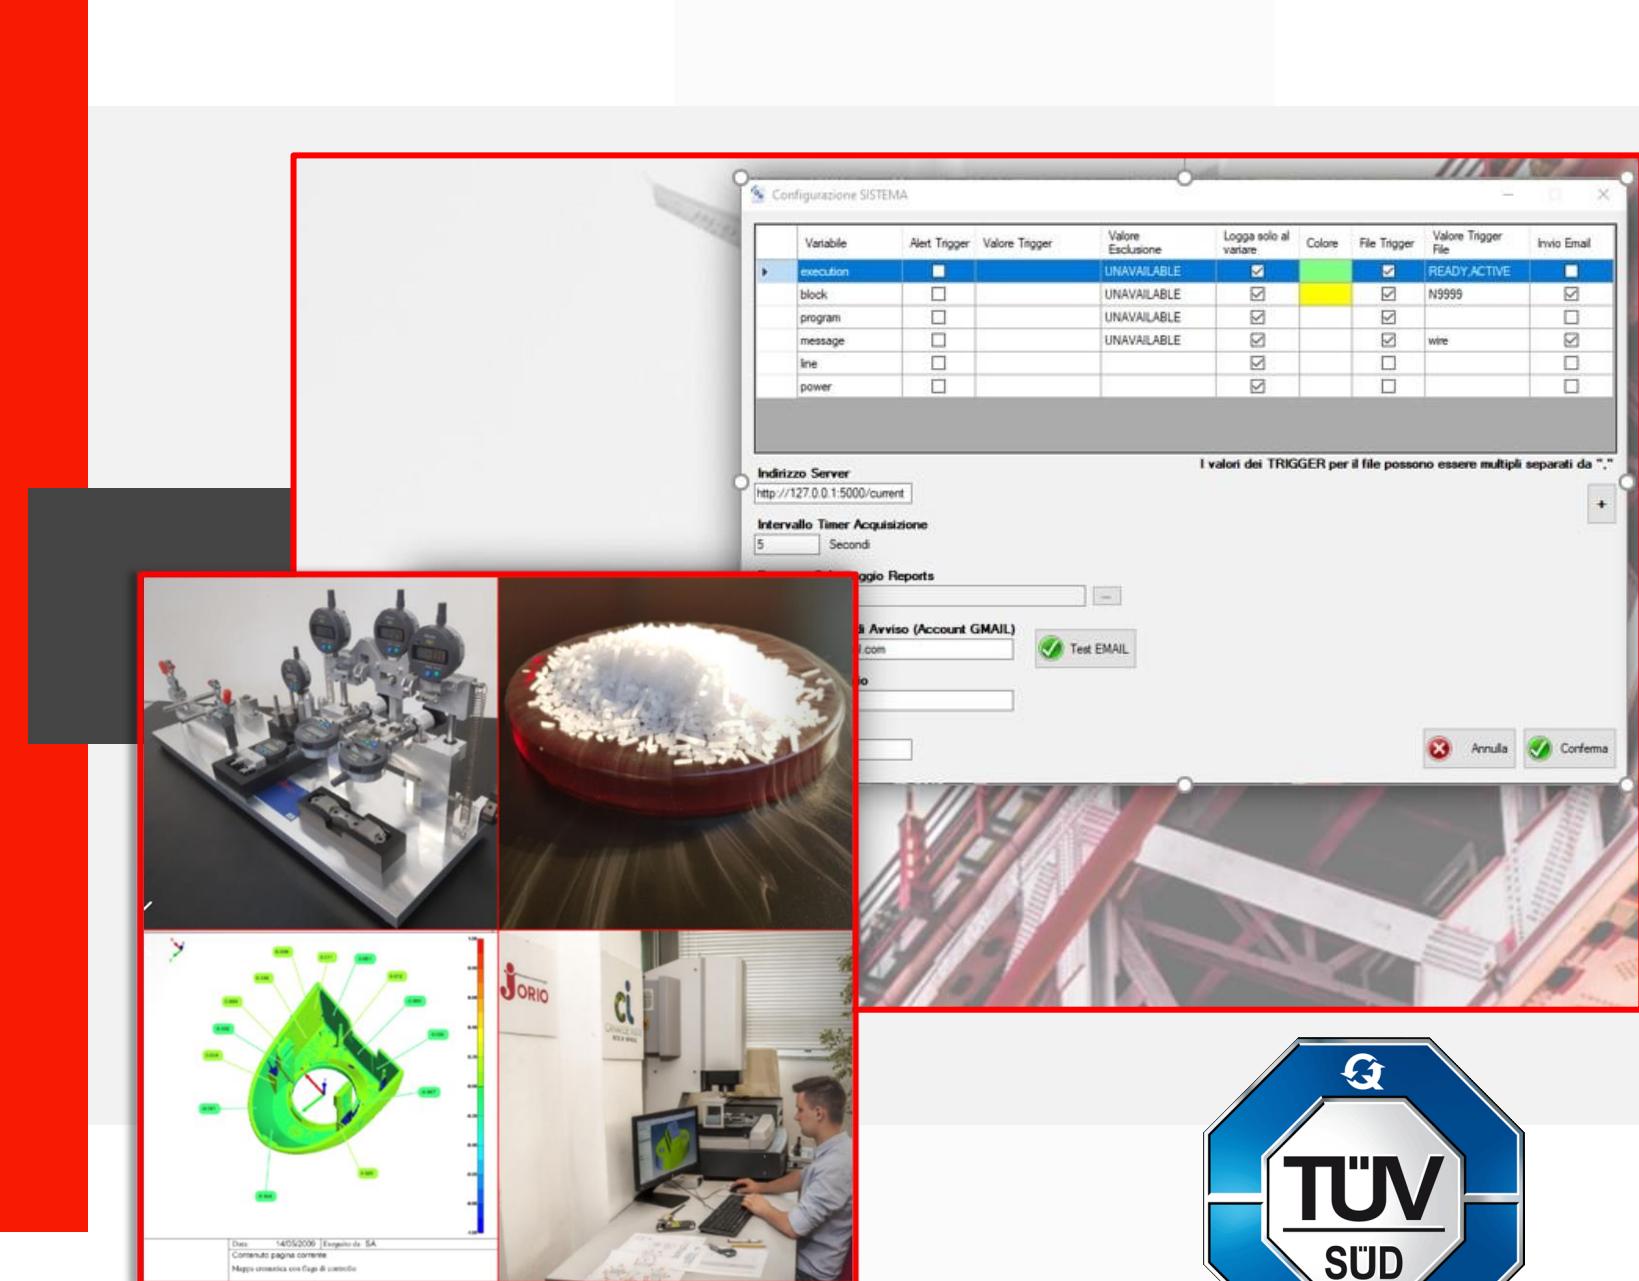

TECHNOLOGY AND QUALITY

We are confident in our ability to do this because we have both a great team and many very advanced technologies like dry ice burr removal which allow us to eliminate all burrs on micro-parts, especially those realized in plastic. We have an internal control system that connects the working centre to the company's server, this allows us to constantly check and monitor our production.

We also design and produce equipment for checking and testing.

One of the added values of the company is precisely in these phases. Thanks to the experience of creating master equipment for our customers, we are able to design and build smaller objects which are then capable of performing precise checking during the individual stages of processing.

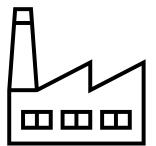

JORIO S.R.L. ISO9001-2015 CERT

# INSIDE

40+

*Years of experience*

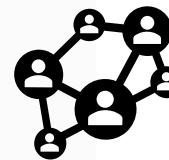

*2,500 square meters of  
production area*

*6,500 project completed*

*9 countries served in the world*

*6 areas of intervention*

*1 business network*

## *DO YOU KNOW CANAVESE INSIDE?*

Canaves Inside is the first network of companies in the Canavese area, Luciano Iorio is co-founder and president.

The corporate network that integrates all the main areas of expertise in the field of industrial services with high added value.

is able to obtain better results in shorter times, transforming through its heterogeneous and complementary know-how a design idea into a prototype or a successful product to be launched on the market.

The 11 Canavese companies operating in the industrial sector, have chosen work in synergy by setting up a business network with the aim of increasing international competitiveness and recognition on business to business markets, through a common vision, enhancing the sense of belonging to a historical and culturally innovative territory such as Canavese.
