

Turn operational data into better decisions.

Data science and solution development, alongside your team.

WHAT WE CAN HELP WITH

01

Data quality check

Assess readiness and process context, or start from an existing, trusted dataset.

02

Performance analysis

Apply specialist analysis and modelling to defined operational and maintenance questions.

03

Decision support

Design and build tailored models and tools that fit your team's operational needs.

SPECIALIST CAPACITY, ALONGSIDE YOUR TEAM

Extend your engineering, IT and data teams with senior data-science and development expertise, for a defined project or ongoing support, without adding permanent headcount.

Bring one operational question.

Keep this checklist for your next data discussion.

- ☐ **Decision** What do you need to decide or improve?
- ☐ **Data** Which records exist, and over what period?
- ☐ **Context** Which operating changes or maintenance events matter?
- ☐ **Next step** Who will use the solution, and how will they use it?

From data readiness to a working solution. We help define the question, develop the analysis and build tools your team can use.
