MMP-1 ELISA KIT

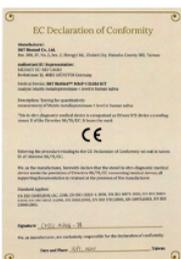

INTENDED USE

- Intended Use: **Quantitative** detection of MMP-1 in human saliva, as an adjunct tool for OSCC assessment in individuals aged 30-90.
- Cut-off Value: A positive result indicates salivary MMP-1 higher than the preset cut-off value.
- Test Result: Cheek mucosa, gum, floor of mouth, tongue (excluding base), retromolar area, and multiple oral cavity sites.
- User: Qualified laboratory professionals.

APPLICATION

- ✓ Rapid screening in combination with first-line visual examination;
- ✓ Adjunctive diagnostic support in clinical settings;
- ✓ Post-treatment follow-up and monitoring.
