

Hackers on Your Side.

Professional ethical
hacking services

www.citadelo.com

Who We Are

Citadelo is a leading European cybersecurity company with offensive security at our core. Our team of 47+ certified professionals specializes in identifying vulnerabilities in applications, networks, cloud infrastructures, and industrial systems before attackers do.

Our services span three key areas:

Offensive Security – Penetration testing, security assessments, vulnerability research (20+ CVEs discovered)

Defensive Security – SOC/SIEM, security monitoring, threat detection

Compliance & Advisory – Meeting regulatory requirements (NIS2, DORA, PCI DSS, ISO 27001, GDPR, SOC2), plus incident response and digital forensics

Every team member passes rigorous selection including CTF testing and maintains certifications like OSCP, CISSP, and CEH.

Citadelo by Numbers

3,000+

COMPLETED PROJECTS

Over 14 years of operation, we have successfully completed more than three thousand penetration tests and security audits for clients worldwide.

200

CLIENTS SERVED

We are trusted by clients from various industries including banking, automotive, telecommunications, energy, media, financial services, and consulting.

14

YEARS OF EXPERIENCE

More than a decade of experience in cybersecurity enables us to recognize even the most sophisticated security threats.

3

EUROPEAN BRANCHES

Our offices in Slovakia, Switzerland and Czech Republic provide local support with international quality standards.

47

SECURITY PROFESSIONALS

Our team consists of more than 47 experts including ethical hackers, consultants, analysts, and security architects.

3,293

VULNERABILITIES FOUND IN 2025

In 2025, we identified 3,293 security vulnerabilities across tested projects, 15% of which were classified as critical or high risk.

Our Services

Penetration Testing and Auditing

We penetrate web and mobile applications, APIs, and infrastructure according to OWASP, NIST, and OSSTMM. Includes PCI DSS testing, source code audits, social engineering, and Red Teaming.

Cloud Security Testing

AWS, Azure, Google Cloud, VMware, Hyper-V – we test all major platforms. Finding security gaps in configuration, permissions, and architecture.

Industrial Security (ICS/SCADA)

Industrial systems are often vulnerable. We test ICS/SCADA infrastructures, IoT devices, and critical systems you can't afford to underestimate.

Security Monitoring & SOC

Our SOC monitors security 24/7. Detecting incidents in real time, analyzing events, and investigating attacks.

Red Teaming & TLPT

Real attack on your organization – technically, physically, and through people. Including TLPT for financial sector according to regulatory requirements.

Our Services

Training & Security Awareness

Training for developers (OWASP TOP 10, secure coding) and employees (cyber threats, GDPR).

Consultancy Services

ISMS implementation, GAP analysis (ISO 27001, SOC2, GDPR), risk management, security architecture, incident response.

Source Code Analysis & Secure Development

Automated and manual code analysis with the possibility of integration into agile sprints.

Social Engineering

Phishing campaigns, vishing, physical tests, and OSINT combined with training.

Blockchain & Smart Contract Security

Testing of smart contracts, dApps, cryptocurrency wallets, and blockchain infrastructure.

Custom Solutions

Tailored solutions for specific client security requirements.

We help organizations meet regulatory requirements: NIS2, DORA, PCI DSS, ISO 27001, GDPR, SOC2

Certifications

Company Certifications & Memberships

We hold **ISO 27001** (information security management system) certifications, **ISO 14001** (environmental management system), and **ISO 9001** (quality management system) certifications.

Team Professional Certification

Our team holds the most respected certifications in cybersecurity:

OSCP
Professional certification in offensive security

OSWE
Advanced certification for web application security testing

OSEP
Advanced certification for experienced penetration testers

OSED
Advanced certification for security exploit development

OSCE³
Highest OffSec certification in offensive security

CISSP
Globally recognized certification for security professionals

OSCP+
Renewable three-year version of the OSCP certification

ISA/IEC
Advanced certification for industrial cybersecurity professionals specializing in OT/ICS systems

CEH
Certification covering key techniques in ethical hacking

BSCP
Official certification proving expertise in web security

ISO 9001
International standard for quality management systems

ISO 14001
International standard for environmental management systems

ISO 27001
Standard for information security management systems

ISO 27001 Lead Auditor
Certification for leading information security audits

Expertise & Recognition

Research-Driven Security

20+ CVEs Discovered

Our team has discovered more than 20 officially registered security vulnerabilities (Common Vulnerabilities and Exposures). The complete list is available on our website.

Compliance Done Right

Our services help organizations comply with key regulations and standards:

NIS2 | DORA | PCI DSS | ISO 27001 | GDPR | SOC2

Co-Authorship OWASP

Tomáš Zatlík, Board Member of Citadello

is a co-author of OWASP (Open Web Application Security Project), which is the global standard in web application security and a recognized authority in cybersecurity.

CVE Discoveries

VMware Cloud Director CVE-2020-3956

(RCE, CVSS 8.8) – discovery of a critical Remote Code Execution vulnerability in one of the most widely used cloud platforms, demonstrating our ability to identify even the most complex security issues in enterprise technologies.

YAML CVE-2023-47204

Unsafe YAML deserialization in yaml.Loader in transmute-core before 1.13.5 allows attackers to execute arbitrary Python code.

IBM Corporation CVE-2025-0159

IBM FlashSystem could allow a remote attacker to bypass RPCAdapter endpoint authentication by sending a specifically crafted HTTP request.

How We Work

Our penetration testing process is transparent and tailored to your needs.

Meeting and NDA signing

In-person or online meeting where we discuss your security needs and testing scope. We sign an NDA for absolute confidentiality.

Testing proposal

We prepare a detailed testing proposal containing scope of work, methodology, timeline, and pricing.

Contract signing

Signing of the contract that formalizes all agreed terms including scope, deadlines, and responsibilities.

Hacking

Our team performs comprehensive security testing using a combination of automated tools and manual techniques with minimal impact on operations.

Report delivery and follow-up

We provide a detailed report describing vulnerabilities, criticality assessment, and remediation recommendations. We offer consultations and follow-up retests.
