Area and zone security

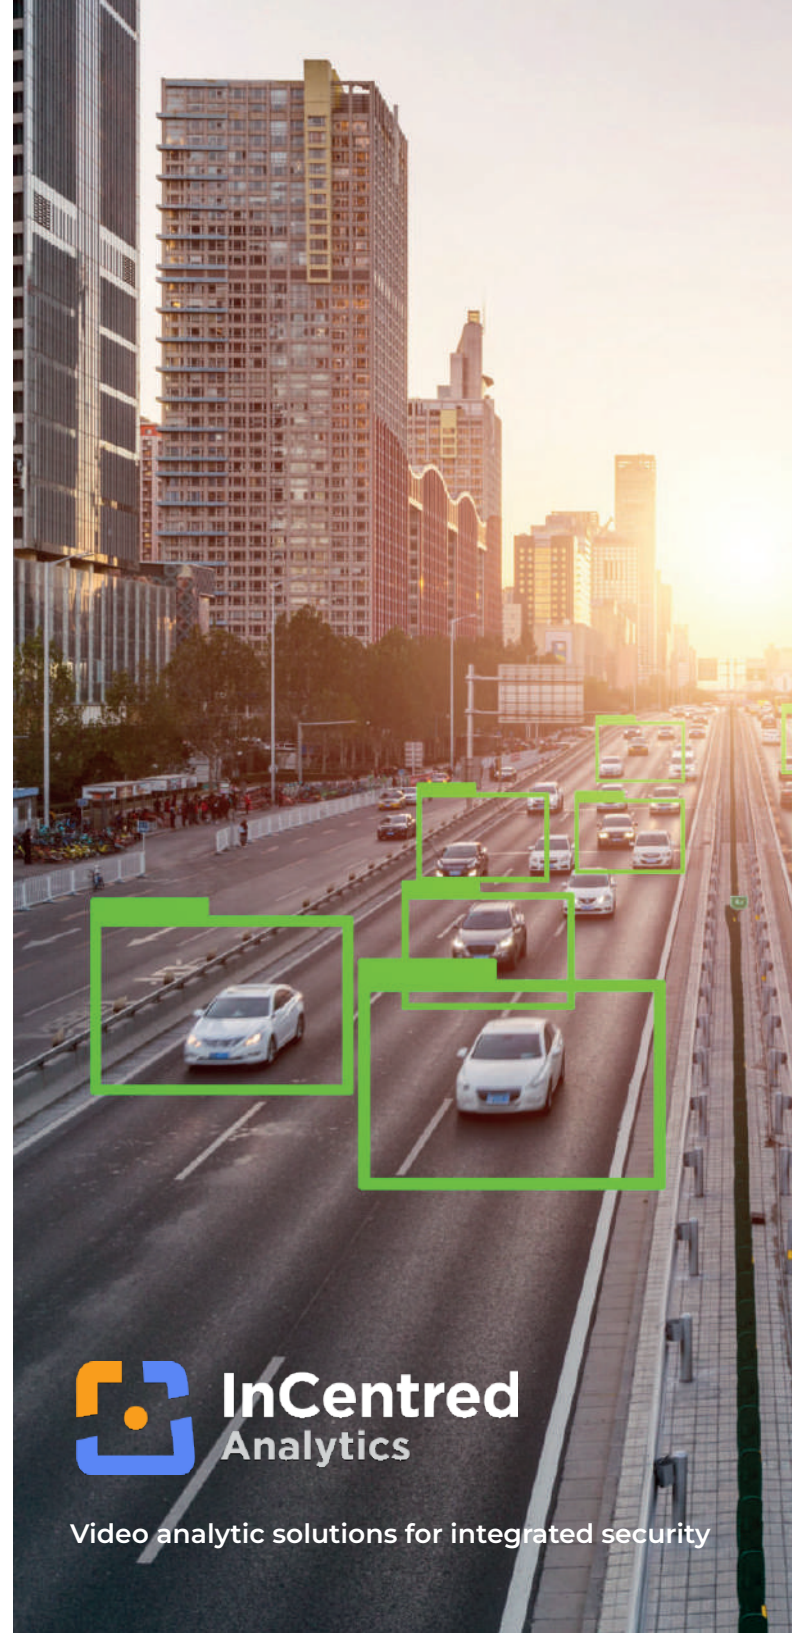

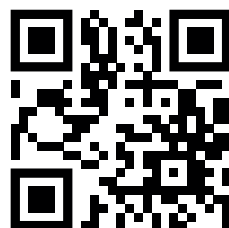

SINPRO
Creating Solutions

Reliable and seamless operation, proactive monitoring and event management, as well as keeping a business up and running are key advantages for any customer. These benefits ensure our customers that their business processes will not be interrupted. Customers can concentrate on their growth and not worry about routine operations related to control and site management.

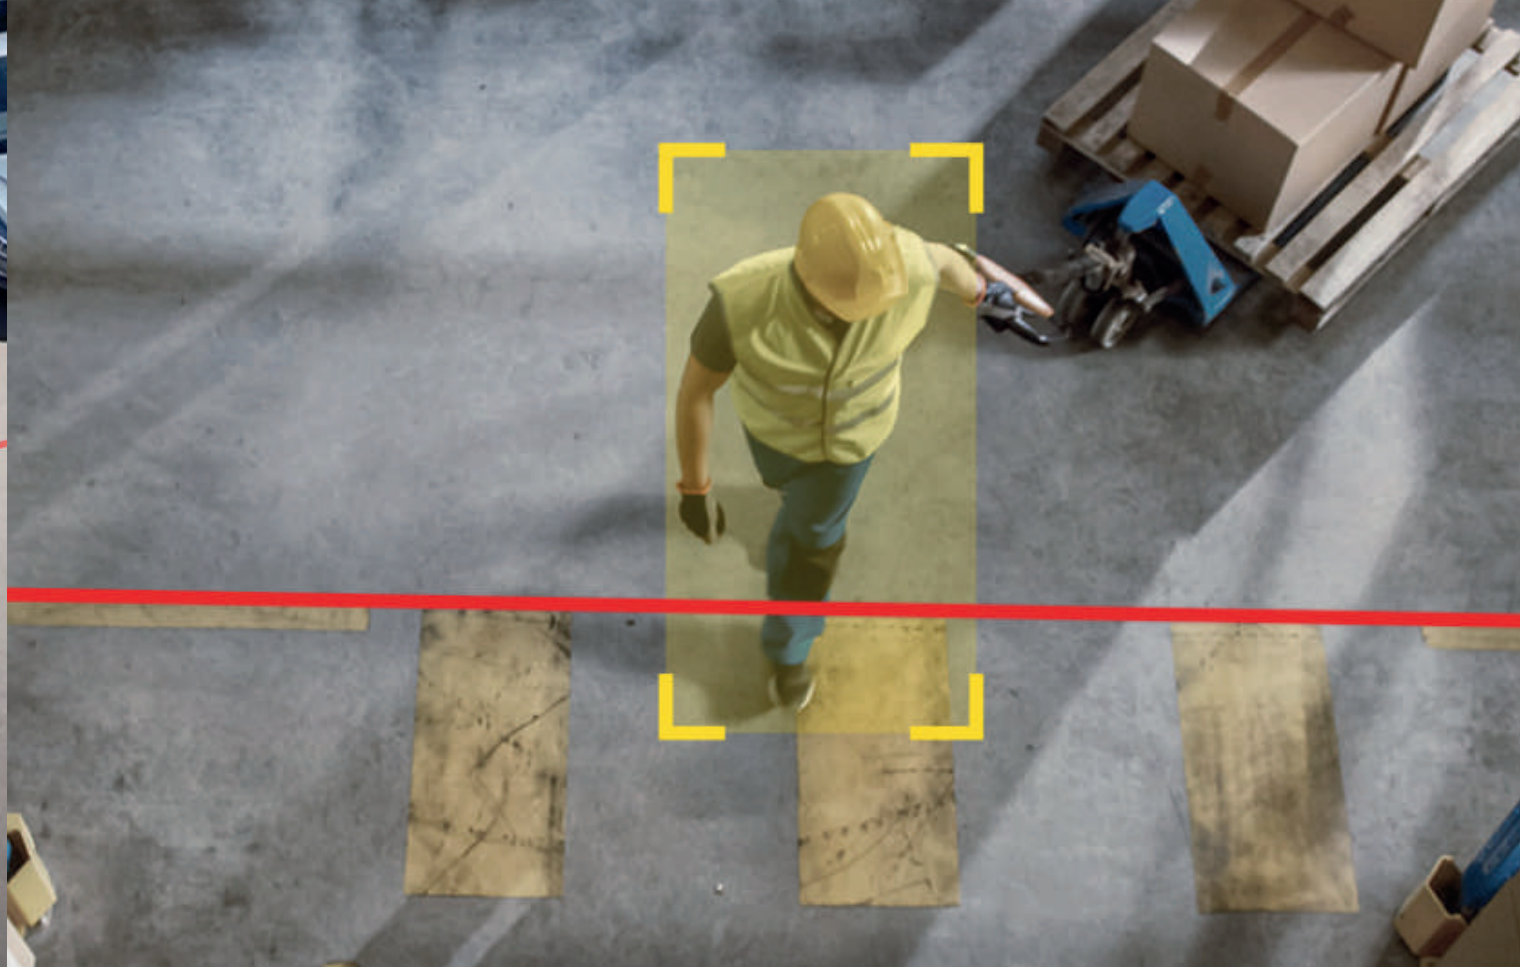

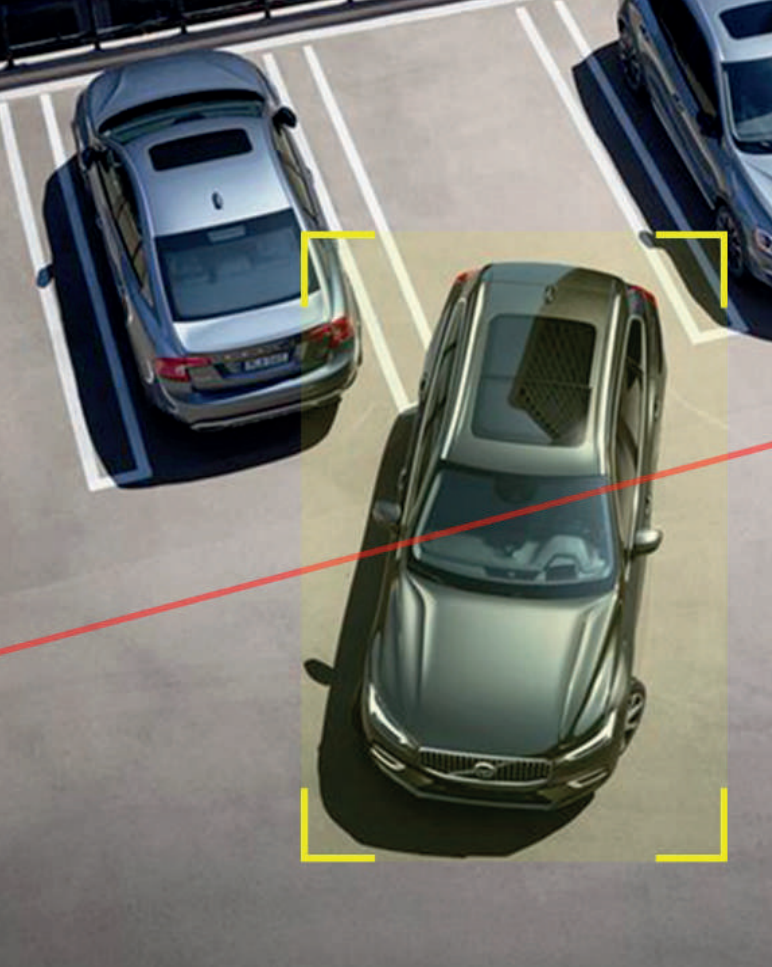

Our solutions help to automate all manual or semi-manual processes. We use our expertise and experience to make our customers more successful.

InCentred Analytics is capable of detecting vehicles and people

Cars | trucks | bicycles | motorcycles | buses

Persons

KEY FEATURES

- **Object Detection:** Identifies when an object enters a specified area of interest.
- **Loitering:** Recognizes an object that remains within the area of interest for a prolonged period.
- **Virtual Line:** Detects an object crossing a directional line within the camera's field of view.
- **Object Appearance:** Tracks and counts the number of objects entering the area of interest.
- **Object Absence in Defined Area:** Notes the absence of objects within a particular area of interest.
- **Object Entry:** Keeps a record of objects entering the area of interest.
- **Object Leave:** Keeps a record of objects leaving the area of interest.
- **Incorrect Direction:** Detects when an object moves in an undesired direction.
