Cost-Efficiency

Hiring a full-time CTO can be expensive. Our flexible service allows you to access high-level technology expertise on-demand, saving you significant costs.

Scalability and Agility

Will help you scale your technology infrastructure, adapt to changing market dynamics, and seize new opportunities swiftly.

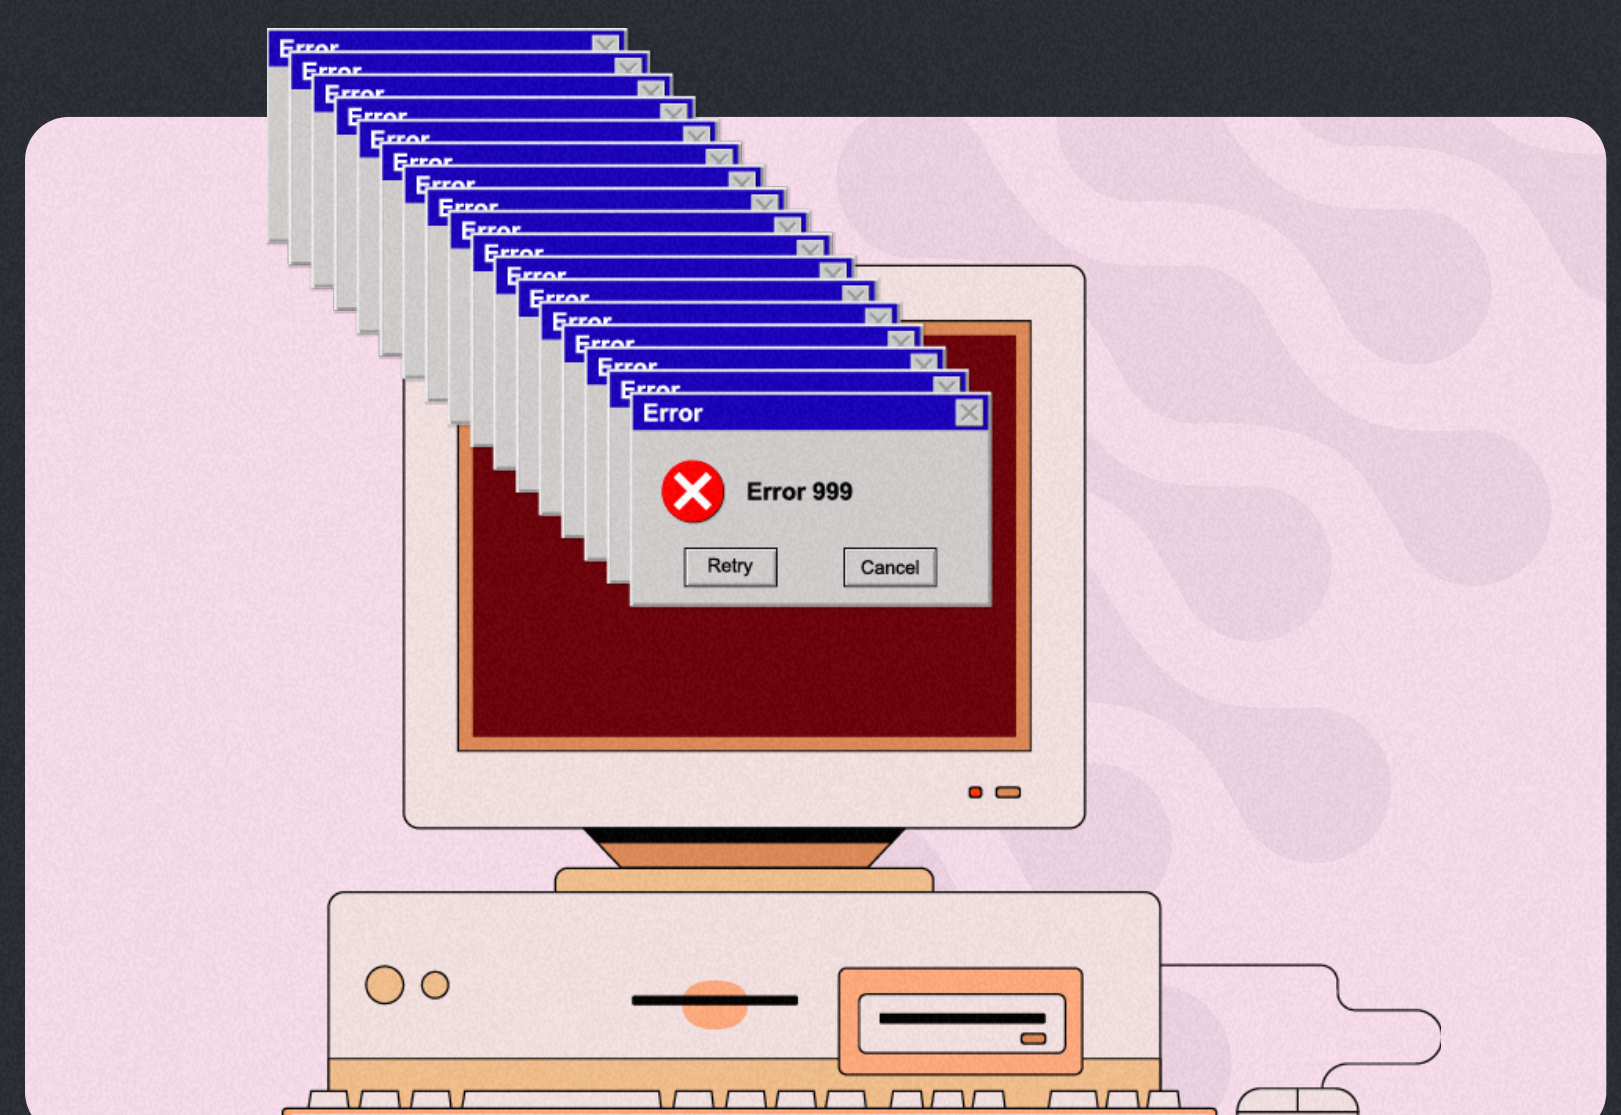

Digital Direction

Minimizing risks and monitoring your digital progress. Our CTOs will develop strategies to minimize potential risks and implement a robust system.

Our CTO offers you with

Legacy software

It is common for an organization to be dependent on software that once served you very well. But the world moved on and CaaS helps you out of the trap of outdated software. We analyze your system, give an accurate estimate of the cost of the project, and set priorities. Our CTOs are more than advisors; they are part of your team from analysis to end of development, leading stand-ups and attending management and retro meetings.

Whether your challenge is the interconnection of existing systems or the implementation of the first major software project, CaaS is a good solution. The CTO takes on more of the project management burden and supports both technology selection, system design, and partner selection. CTOs are not just advisors; they are active members of the team from initial analysis to the end of development. They conduct stand-ups, guide management meetings, and even retro meetings as part of the normal software development process.

Conceptual change

Does a product or process need updating? Both may require attention if business concepts change. Our CTO goes beyond writing code to understand exactly what your business needs. We offer more than technical expertise; we are your change management partners. From assessment to implementation, we offer a comprehensive service that not only addresses software upgrades, but also smooth transitions in processes and team dynamics.

Product Development

Are you ready to take your idea from scratch to a unicorn? Our CTO comes to the fold to dive deep into who your customers are, what makes your offering unique, and what the vision for the future might be. But we are not just dreamers; we are doers. Our technology manager can propose scalable software solutions that you can use to conquer the world. Do you need additional investment to realize your ideas? We are in daily contact with angel and venture capital investors and can help raise funds with both networking and pitching exercises.
