ARE YOU READY TO CREATE THE OUTDOOR SAUNA OF YOUR DREAMS?

The TAIVE outdoor sauna offers a pleasant sauna experience for all the senses: its design language is minimalist and elegant, the lighting creates the atmosphere, and the effective ventilation ensures enjoyable steam and a relaxing experience for every bather.

The TAIVE garden sauna combines timeless design, modern technology, and traditional sauna expertise – *together, these elements form a truly authentic Finnish sauna experience.*

FRAME, WALL AND ROOF MODULES

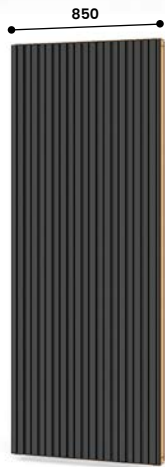

Frame

The TAIVE outdoor sauna revolutionizes sauna design thanks to its modular structure. The entire construction is based on a solid wooden frame that accommodates three modules on each side.

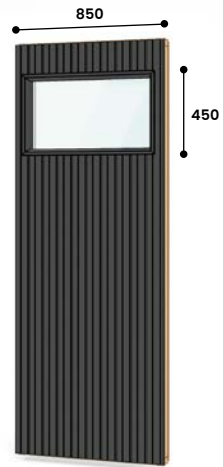

Wall modules

The element selection includes two types of solid wall elements, three window elements with varying window sizes, and a door element available in both right- and left-handed versions. The floor and ceiling are integrated into the frame.

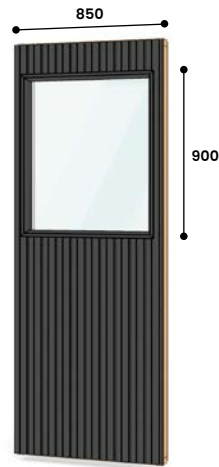

Wall module

The module includes exterior and interior cladding.

Window module 1

The module includes exterior and interior cladding and a low window.

Window module 2

The module includes exterior and interior cladding and a half-height window.

Window module 3

The module includes exterior and interior cladding and a tall window.

Door module

Available in right or left-handed (left-handed shown).

TAIVE SAUNA BENCHES

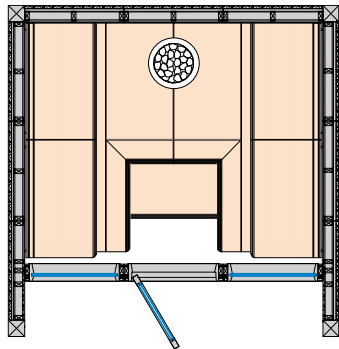

Choosing benches

The TAIVE outdoor sauna naturally comes equipped with TAIVE benches. There are four different ready-made bench packages, with the L and J models also available in both right- and left-handed versions.

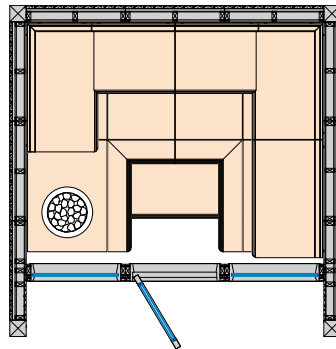

If none of the ready-made options suit your needs, we can tailor a custom-made bench just for you.

The soft and timeless design of the TAIVE benches, combined with Cariitti sauna lamps, creates a lasting impression in any sauna. Not just because of their appearance – *TAIVE benches are simply very comfortable to sit on.*

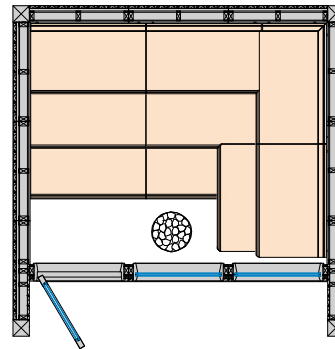

II benches

The opposite-facing bench model is ideal for socializing with a larger group of sauna guests. The sauna moment becomes a shared experience for everyone.

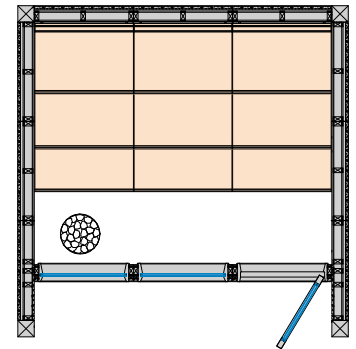

J benches

Also suitable for the needs of a larger number of bathers. The divan section allows you to lift your legs onto the bench, completing a truly relaxing sauna experience – even when enjoying it all by yourself.

L benches

Provides ample seating space. With the L model, you ensure a safe and comfortable sauna experience, even for the youngest members of the family.

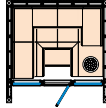

Straight benches

A generously sized and visually clean straight bench model, perfect as a sauna with a view, where the surrounding landscape becomes part of the experience.

EXAMPLES OF OUTDOOR CABINS

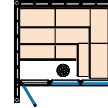

1. Sauna Cabin

This sauna cabin has a door in the middle and a **J bench solution**.

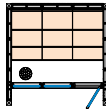

2. Sauna Cabin

This sauna cabin has a door on the left and an **L bench solution**.

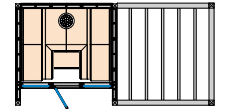

3. Sauna Cabin

This sauna cabin has a door in the middle and a **straight bench solution**.

4. Sauna Cabin+ Pergola

This sauna cabin has a door in the middle and a **II bench solution**. In addition, two window elements have been selected for the side wall of the sauna cabin. The pergola is equipped with terrace glazing.

Exterior Cladding, Frame and Benches

The exterior cladding and frame are made of Finnish spruce. The frame comes with low, adjustable pillar legs. We recommend installing the sauna on a stable base, such as concrete slabs.

The benches are made of domestic birch veneer, with a surface layer of either hemlock or CWP birch veneer. All bonding is done with weather-resistant D4-class adhesive, which meets the M1 emission classification. This construction ensures excellent load-bearing strength and minimal moisture movement.

Lighting and Electrical Installations

The lighting system is Cariitti Sauna Ultra Ambient, which is approved according to the European standard Ta+125°C. The product is specifically designed and certified for sauna use, and it's also UL-certified.

Above the heater, a fiber optic light can be installed in the ceiling to illuminate the heater and the steam. The lighting is complemented by the digital Cariitti Aspectu temperature/humidity meter.

The cabin structure is designed to meet all necessary requirements for electrical installations.
