

# Hybrid Connectivity for every vessel, anywhere

As business applications continue to move to the cloud, the need for reliable, always-on, and cost-effective internet access has never been greater—whether on land or at sea. **Hybrid cellular LTE/5G and satellite solutions** offer seamless connectivity, ensuring that global enterprises stay connected.

Blue Wireless delivers unparalleled connectivity whenever and wherever it's needed. Powered by Low-Earth Orbit (LEO) satellite technology, this hybrid approach ensures continuous communication, enhancing operational efficiency, and crew well-being. From shore, coastal zones to the most remote oceans, our solutions are customizable, depending on the size of your vessel, fleet, and the international routes you navigate.

Access Critical  
Vessel and  
Operational Data

Keep Crew  
and Passengers  
Connected

Dependable  
Communication for  
Efficient Operations

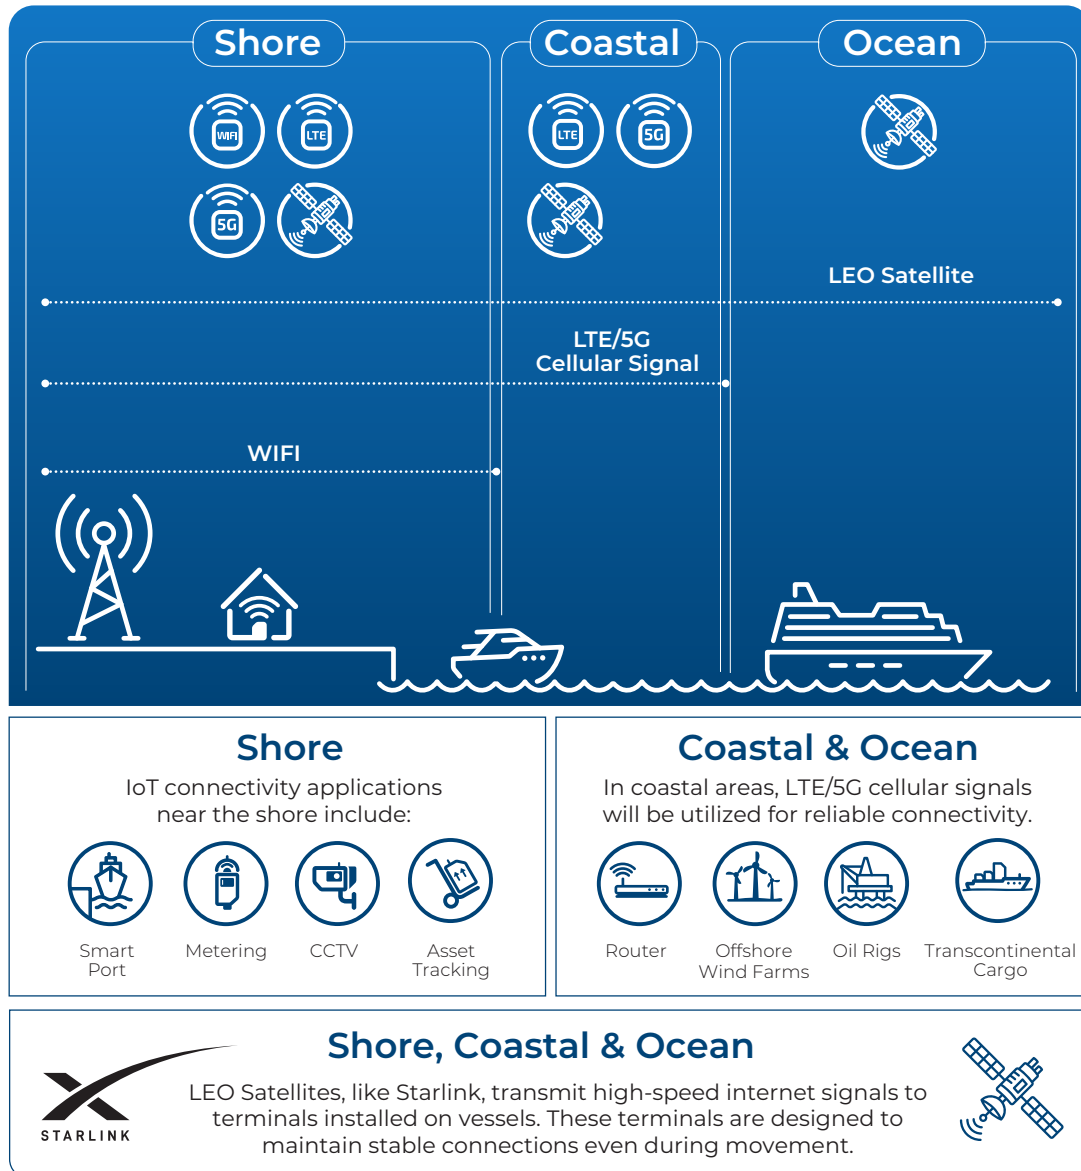

Efficient Goods  
Transportation  
Worldwide

# Revolutionizing the maritime industry

Combining networks offers better energy consumption, fast and reliable internet access, and maximizes the strengths of each network.

The following illustrates hybrid solutions combining LTE/5G and satellite technologies like Starlink.
