■ MISSION

Ensuring AI respects ethical principles, social values, legal norms and human rights is now essential.

It's not just the right thing to do – it's **an operational advantage**.

■ WHAT WE DO

Ethical AI must become the norm, not the exception.

That's why we're building tools to make **AI risk evaluation easier, faster and more affordable**. By lowering the entry barriers, we help turn responsible AI into an **industry standard**.

■ WHAT WE DO

Our vision translates into a scalable technological solution.

● **ARIA – Assessment and Responsibility for Impactful AI**

Digital platform for a hybrid ethical assessment that integrates human analysis and automation, scalable while maintaining the importance of contextualization.

● **SRAI (Social Return of AI)**

Indicators to objectively quantify the social and environmental footprint generated or potentially generated by AI, and to highlight AI projects that integrate ESG parameters.

● **Ethical KPIs of generative models**

Proprietary indicators to efficiently measure the reliability, transparency, fairness, robustness, manipulability, and sustainability of generative and predictive models.
