Mission Statement

We provide quality and customized services for smart and sustainable integration of the renewable hydrogen technologies and energy storage solutions into the business models of our customers helping them to drive energy transition.

Company Description

H2Latvia is a hydrogen technologies and renewable energy consultancy and project developer company. We are helping our customers to integrate green hydrogen and energy storage solutions into their business and operations. With the base in Riga (Latvia) company is focused on serving Latvian and Baltic countries markets.

Services Offered

1. Consultancy and project management in areas of renewable energy, energy storage and green hydrogen / PtX technologies.
2. Development of the strategy and business model for the integration of green hydrogen / PtX and energy storage solutions into the business operations.
3. Techno – Economic analysis for the hydrogen and energy storage solutions.
4. Product sourcing and integration services of green hydrogen and other PtX technologies and energy storage products.
5. Creation of the project consortia for the EU funding calls.
6. Fostering international collaboration and knowledge exchange via collaborative events (seminars and conferences, exchange visits).

Target Market

Private and public companies, municipalities and households looking for customized and quality solutions for energy storage and integration of their renewable energy assets with hydrogen and PtX solutions to drive their operations towards the decarbonization and sustainability.
