About **Rebío**

Re>bío was born in Colombia from an evident reality: the abundance of natural resources that are wasted today. From lost harvests, such as mangoes, to unused organic residues, we didn't see waste, but raw material with potential. That is how Re>bío begins: transforming what is discarded into real solutions for the construction industry and the spaces we inhabit.

We believe the problem is not a lack of resources, but how we understand them. That is why we turn waste into materials that add value, opening up an opportunity the country has always had, but has rarely taken

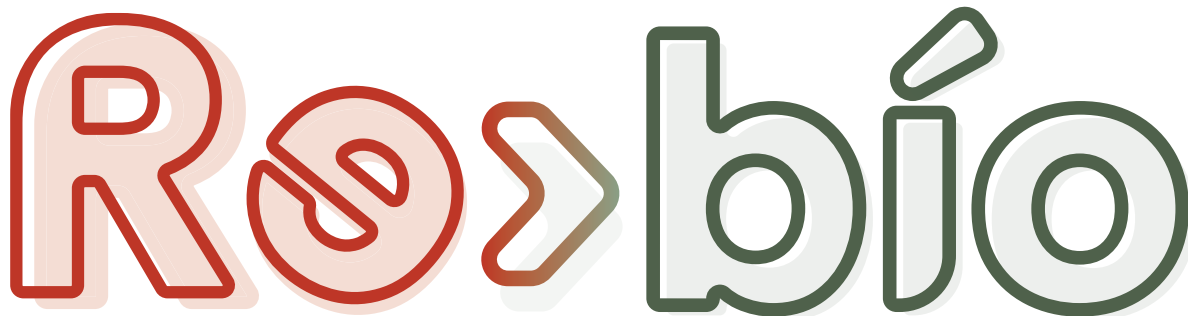

advantage of. Our purpose is also to recover the use of natural materials, bringing them into a contemporary context: more efficient processes, current design, and real applications for the home and architecture.

This path has been made possible thanks to key partnerships: Universidad EAN, which has strengthened our business model; SENA, which has allowed us to prototype and develop; and the Colombian Council for Sustainable Construction, which believes in our potential as part of change.

Our name sums it up:

"Re" is a prefix aligned with our purpose: re-use, re-signify, re-think, re-design, re-value.

"Bio" comes from biomass, bio-based, and biodiversity.

Re>bío

The greater-than sign > communicates transformation, evolution,

Our vision

Reimagining spaces by integrating bio-based materials made from flowers and guiding the industry toward truly regenerative practices.

We explore new ways of creating interior materials and products that not only beautify spaces, but can also nourish nature and return to the soil at the end of their useful life.

We reuse waste from the flower industry to turn it into materials of high aesthetic and functional value, integrating them into the interior design production chain.

We seek to reduce the extraction of minerals used in finishes and interior design elements, thereby reducing associated CO2 emissions.

Our proposal:

A new life for the flower that already gave you beauty.

Our services

We work with you so your space looks incredible.

Technical properties

3-in-1 = Acoustic, Decorative, and Modular

Resistant to fungi and insects, thanks to nanotechnology-based additives.

**Non-toxic, non-chemical
100% natural binders and additives**

**Formaldehyde-free
No carcinogenic adhesive used in traditional products.**

**Compostable
It can return to the soil after composting under controlled conditions.**

**Flame-retardant
Additives that slow down flame spread.**

**Easy-to-install mosaic
Lightweight, and requires no installation tools.**

Sustainability backing (in case you need it for your project)

Life Cycle Assessment (LCA) Certificate

Our Flower Panel has a certificate indicating a 90% lower comparative environmental impact versus similar commercial products, based on an LCA evaluation (ISO 14040-14044). (Fundación Regeneración, February 12, 2026.)

**Validated in a controlled laboratory environment at SENA.*

Flower Panel

A modular decorative panel made from flower stems and leaves that transforms walls into surfaces with texture, art, and presence.

Modular and biophilic

Combine pieces to create anything from a small accent to a full mural – organic, full of character, and designed for spaces that want to stand out.

You can feel it change with the light

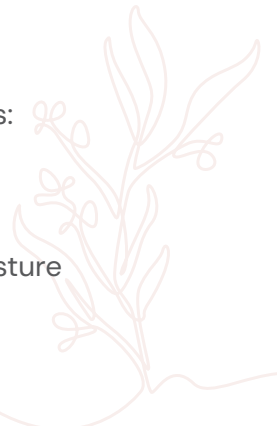

It is not a flat sheet: it has relief, is perceptible to the touch, and looks different depending on the daylight, bringing warmth to the environment.

Beyond the module

For larger-scale projects, we offer large-format solutions for walls and ceilings: more coverage, more efficiency, and a clean design base.

Atelier - One-of-a-Kind Work

Custom co-designed pieces, created from scratch to become a signature gesture within the project.

Mosaico: Colmena

Flex Concept

Flex is ReBío's most creative line: a modular system designed to turn walls into a design piece – whether in your home or in spaces such as lobbies, cafes, restaurants, and coworking spaces. Here, the value lies in freedom: you can build a composition that is more organic or more geometric, subtle or bold, and achieve a result that feels made for that place (its light, its scale, and its atmosphere).

Each panel preserves a real plant texture and handcrafted variations, so the mural never looks “mass-produced.” Flex allows you to personalize with intention: a bio-based surface that not only dresses the space, but differentiates it and makes it memorable.

Flex Mosaics

In the Flex option, you can decide the visual language of the Flower Panel. Each shape behaves like a mosaic: when repeated, it creates different patterns, rhythms, and sensations. Some look more organic and soft; others more graphic and architectural. The choice depends on what you want the space to feel like: calm, energy, order, texture, or movement.

Honeycomb

This is a modular hexagonal panel that can become a vibrant composition of hexagons at various scales, bringing dynamism and personality to the space. Ideal for offices, studios, and coworking spaces seeking a contemporary, creative, and memorable visual accent.

Small honeycomb panel

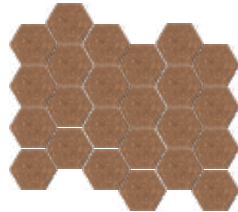

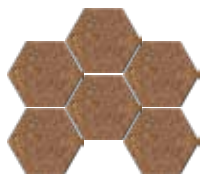

Medium honeycomb panel

Small arrow honeycomb panel

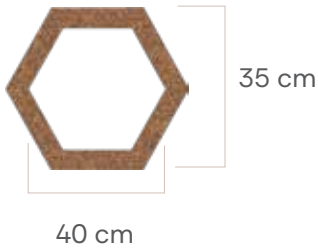

Medium arrow honeycomb panel

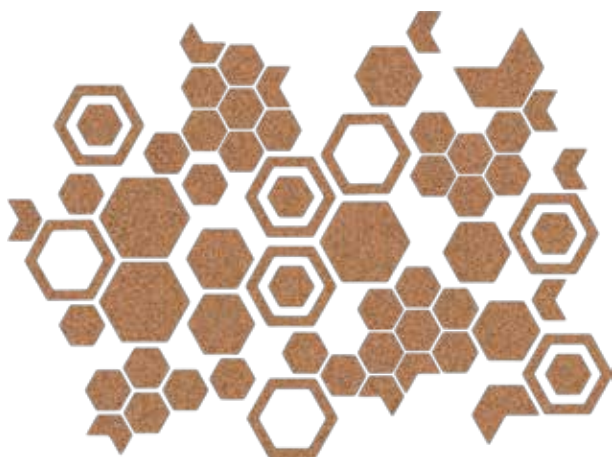

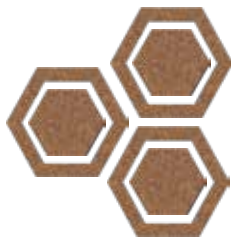

Honeycomb

Large hollow honeycomb panel

Large filled honeycomb panel

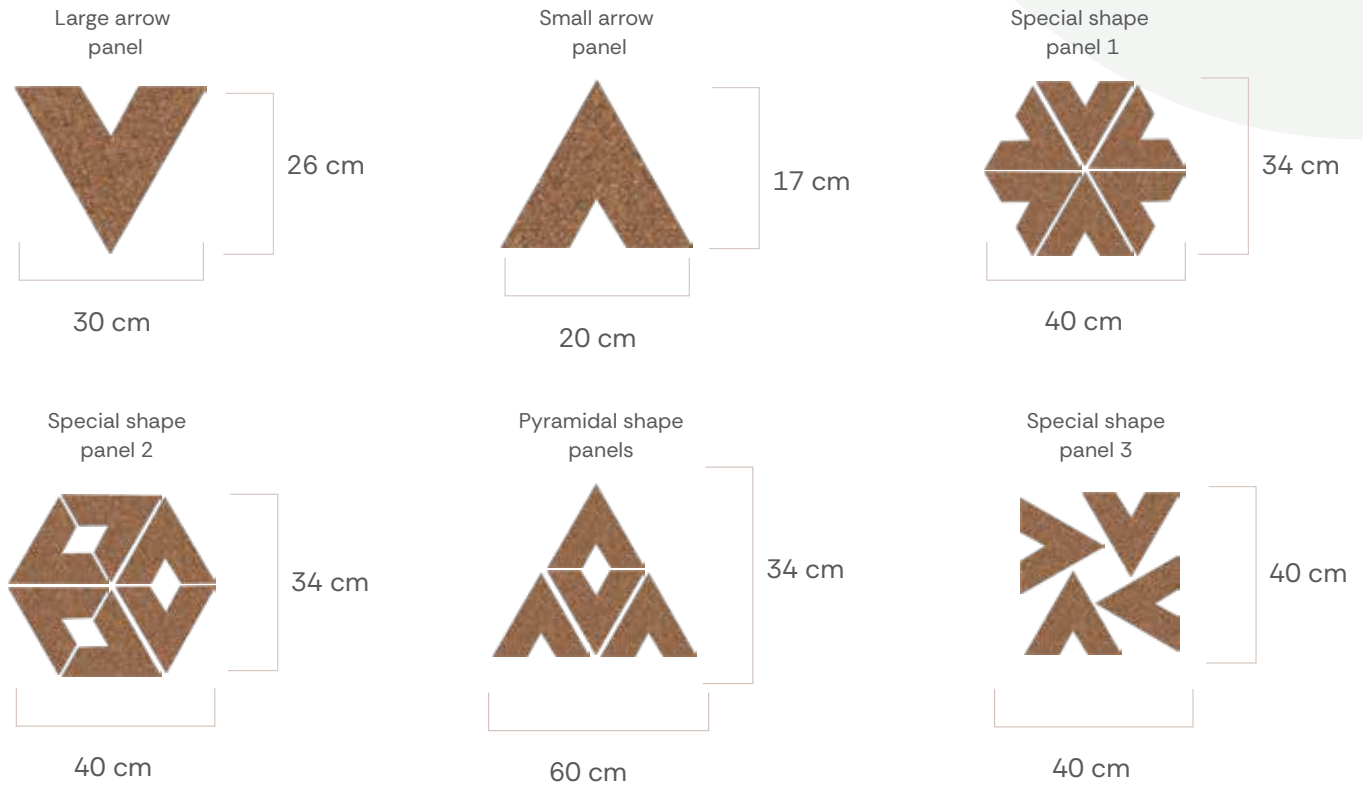

Its composition in different sizes recalls the natural harmony of a honeycomb, creating a wall with character, dynamism, and a subtle connection with nature. Ideal for offices, studios, and coworking spaces seeking a creative, fresh, and memorable environment.

Snowflake

Modular panel with a radial structure that breaks the rigidity of the grid and brings greater visual dynamism.

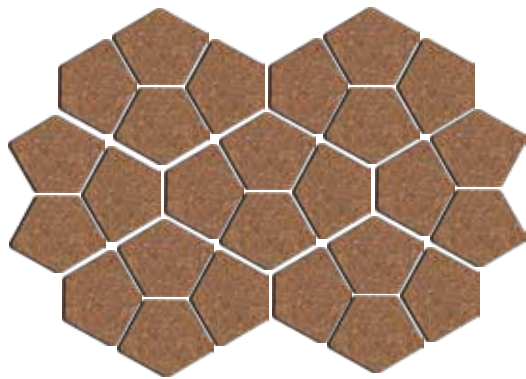

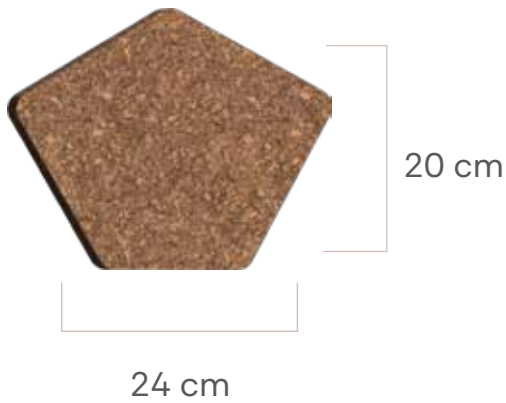

A modular composition that evokes the symmetry and delicacy of snowflakes, bringing a sense of order, freshness, and sophistication to the space. Ideal for offices, lobbies, and contemporary spaces seeking a serene, distinctive visual accent with character.

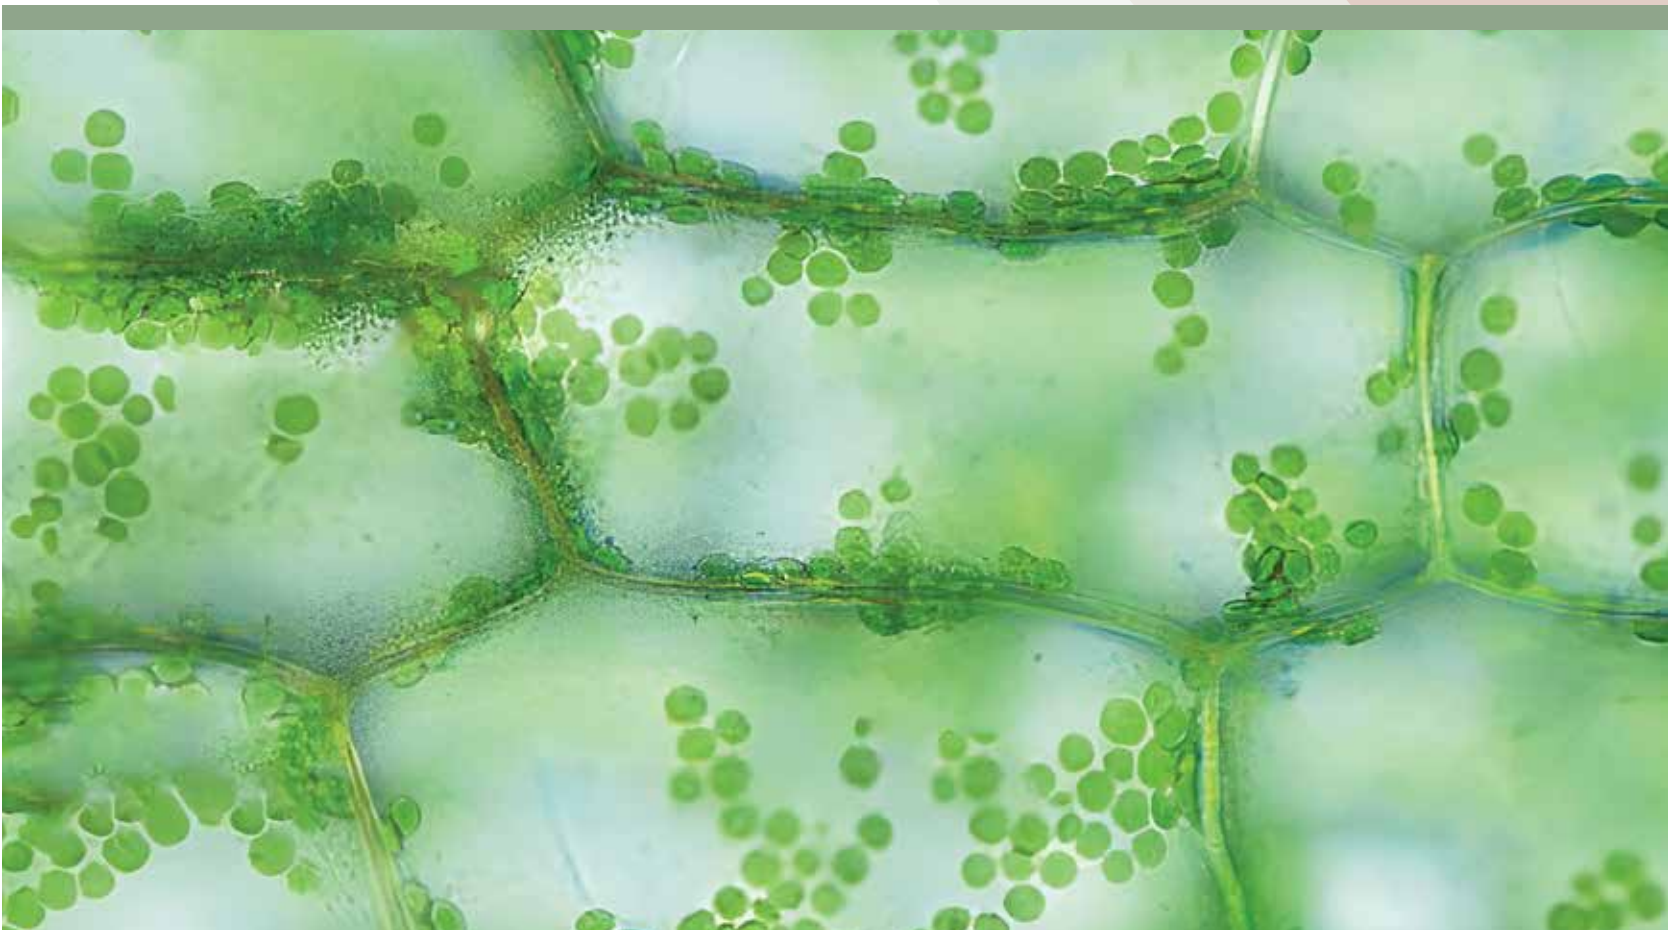

Pentagonal Leaf

A modular five-sided panel with a silhouette that is more organic than geometric. Its shape softens the composition and breaks the rigidity of more linear or repetitive patterns.

Based on the soft and enveloping geometry of the Pentagonal Leaf, this mosaic brings warmth, texture, and a subtle connection with nature. Perfect for lobbies and contemporary spaces that want to feel memorable, welcoming, and full of identity.

Cellular Wall

A modular composition of pentagonal shapes that connect in a continuous, fluid line, creating a mural with rhythm, movement, and visual balance. Its irregular geometry brings a contemporary, organic, and distinctive character to the space.

Inspired by a cell wall, this pentagonal mosaic creates an organic composition with visual rhythm and a subtle connection with nature.

Flex Colors

Serene Cornflower

Midnight Iris

Vivid Poppy

Ivory Magnolia

Cocoa Dahlia

Green Orchid

Smoky Pansy

Golden Sunflower

Sunset Calendula

Bicolor Hydrangea

Palettes and pigments

Our colors are not “flat paints”: they are tones inspired by flowers, designed to bring the feeling of living matter into a space. Each name evokes a real flower and its character – from Serene Cornflower to Bicolor Hydrangea – because at ReBío, color works as atmosphere: calm, warmth, depth, or energy. And as in nature, there may be subtle variations between pieces: that is part of their authenticity.

Compositions

These proposals show how each line behaves in a real space through color, repetition, and scale. Cellular Wall suits serene and contemplative atmospheres, while Honeycomb offers a more structured and dynamic reading in collaborative work environments.

Choose the shape, define the palette, and let us build your composition. We develop modular mosaics designed to adapt to the identity and function of each space.

Mosaic: Snowflake

Mosaic: Pentagonal Leaf

Mosaico: Celular Wall

Applied Compositions

From lobby to home, these compositions show two ways to bring biophilic design into contemporary interior design. Pentagonal Leaf, in the lobby, leans toward an organic modern aesthetic with hospitality design influence: warm tones, sculptural presence, and a more enveloping and sophisticated language. Cellular Wall, in the residential space, moves toward a boho chic and soft minimal style, with a more pastel palette that brings lightness, calm, and a subtler decorative character. Together, they demonstrate how the same modular system can adapt to different atmospheres, from welcoming spaces with identity to corners of the home with serene sensitivity.

Explore the composition that best fits your space and create a wall with character, texture, and natural connection.

Applied Compositions

This proposal shows how a modular composition with an organic silhouette can turn a main wall into a clear visual accent within a space. The open distribution of the pieces and the palette in earth, green, and cream tones bring warmth, rhythm, and a decorative presence that works well in residential interiors, living rooms, or lounge areas.

Mosaico: Pentagonal Leaf

Applied Compositions

In this dining environment, the mosaic unfolds as a continuous mural that follows the length of the space and reinforces its visual identity. The warm palette, combined with color accents, dialogues with the interior materials and brings rhythm, scale, and presence to the dining area without overwhelming it.

Essential Concept

Essential is the simplest way to bring ReBío into your home. It is a ready-to-assemble kit, with a curated selection of shapes and colors (fewer options, zero complications) that allows us to offer a more accessible price without losing what matters most: the character of the material and its story.

Each panel remains unique because of its plant texture and natural variations; you install it, make it your own, and choose a piece that feels good, looks good, and is also environmentally friendly.

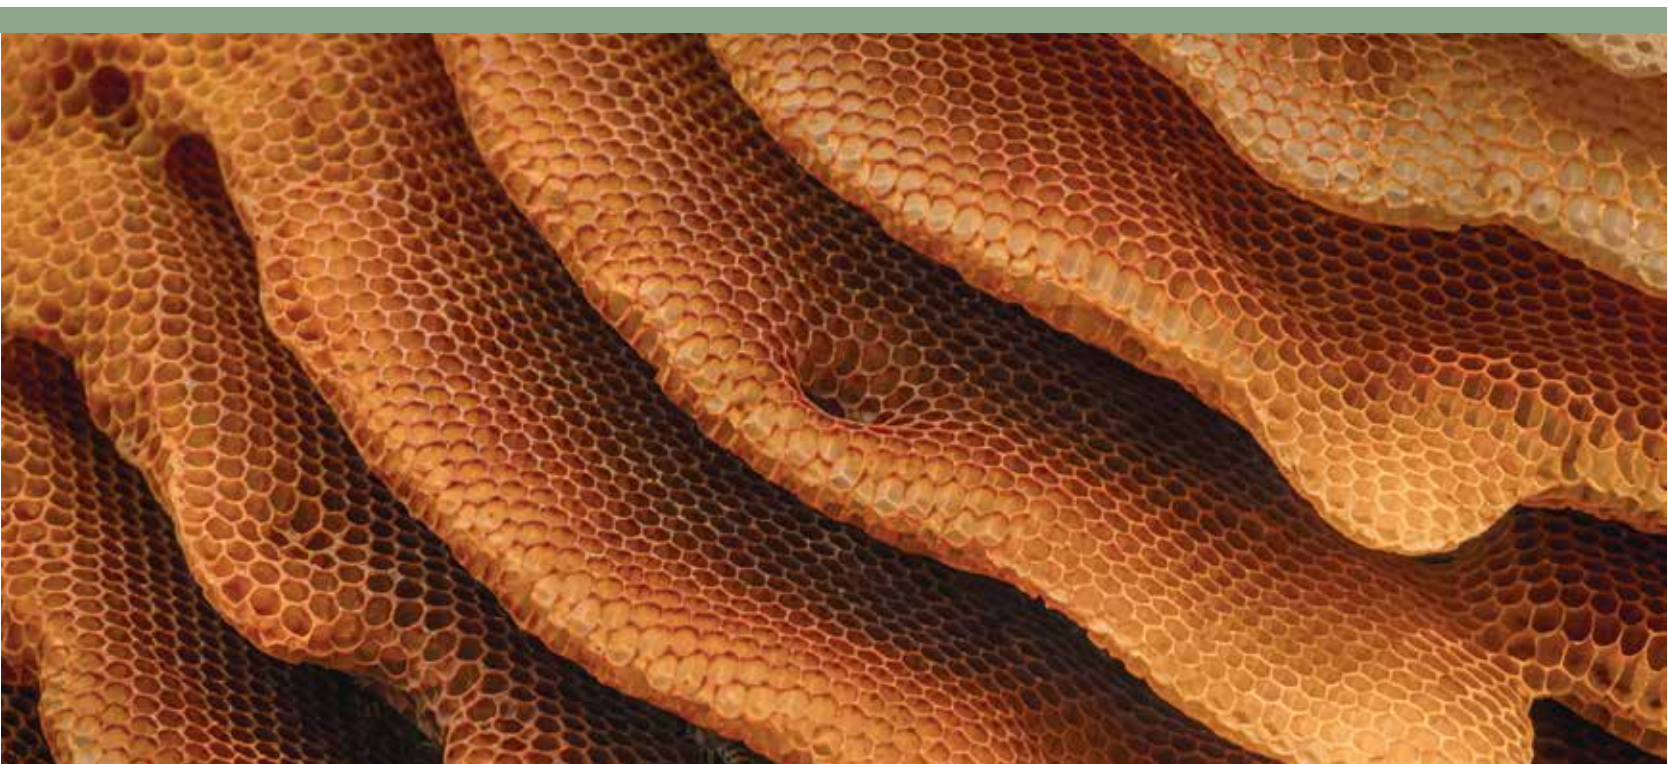

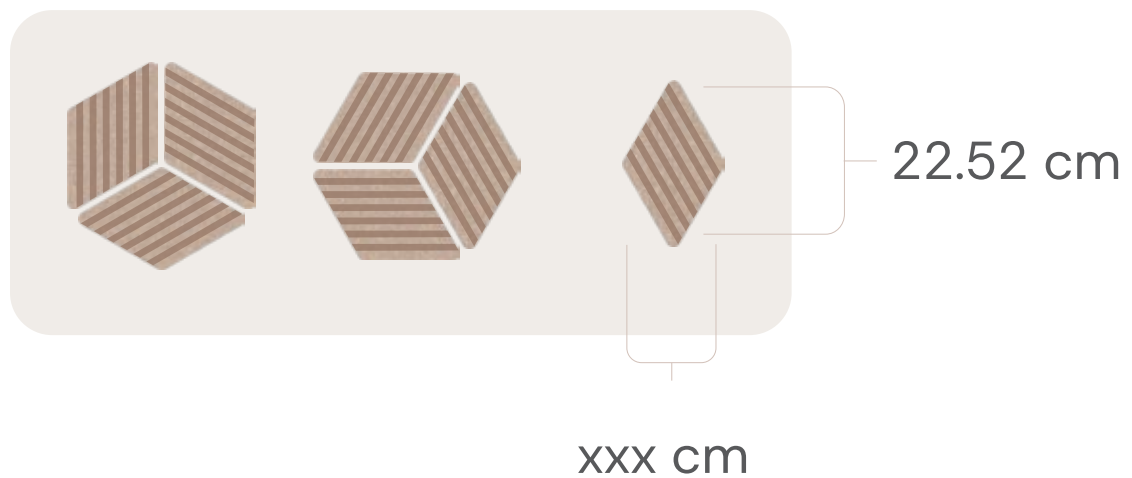

Apis Essential Shape

The heart of Apis is a single base piece: a modular rhombus. Designed to repeat effortlessly, this module allows you to build anything from small accents to complete murals, creating compositions that change depending on how you rotate, group, and expand it.

Each rhombus is made from biomaterial based on recovered flower stems, so no two pieces are identical: the texture, fiber, and

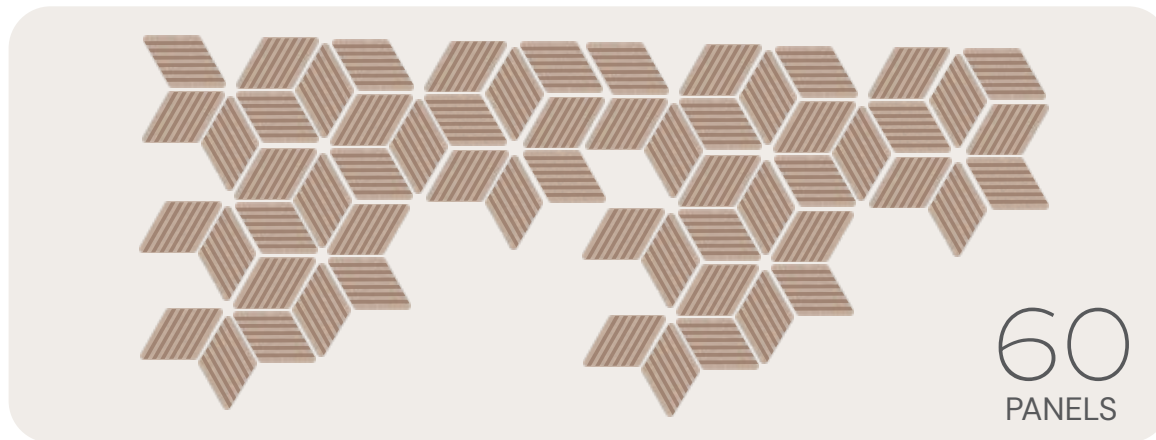

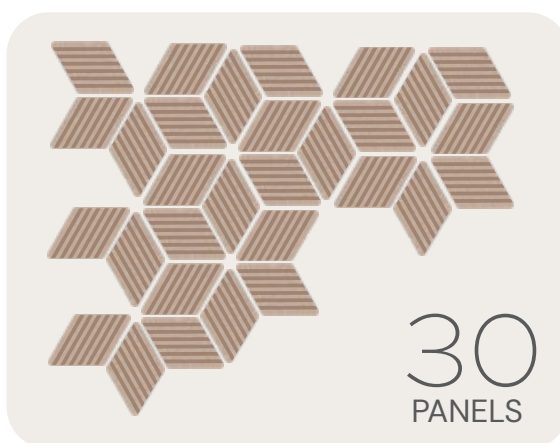

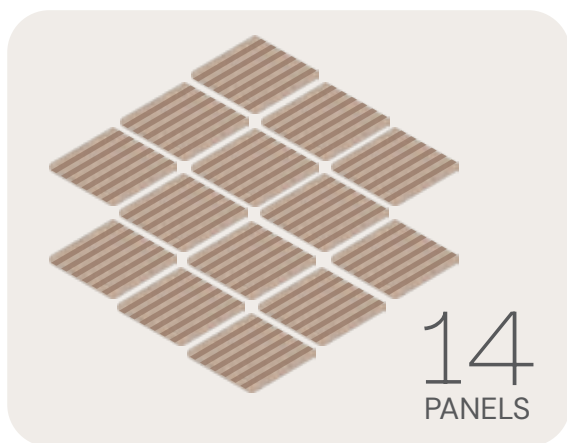

natural nuances make the result feel alive, warm, and authentic. It is a design intended for apartments: easy to integrate, adding relief and character, and turning an ordinary wall into a surface with a story.

A simple, modular, and environmentally friendly system for those seeking conscious design: less artifice, more real matter. You can start with a small composition and make it grow over time, piece by piece.

Apis Creative Shapes

With Apis, a single rhombus becomes many possibilities. Its combinations allow you to create dynamic, balanced compositions that are easy to adapt to different spaces in the home.

Essential Colors

Palettes and pigments

In Apis, each color is born from the same principle: real plant matter, crafted by hand. That is why no panel comes out identical to another: the fibers, nuances, and depth of tone change subtly, and that variation is part of the charm – as with wood, stone, or clay.

At ReBío, color is not just any “finish”: it is a layer of identity inspired by flowers, designed so each piece feels alive and easy to integrate into your space. Our essential palette is made up of five curated tones: Ivory Magnolia, a bright and neutral cream that opens up the environment; Cocoa Dahlia, a warm brown with a feeling of earth and wood; Green Orchid, a serene green that connects with the bio-based and the natural; Serene Cornflower, a clean and elegant blue that works very well with grays and woods; and a dark, desaturated purple – Ash Iris or Smoky Pansy – that brings depth and character without dominating. Each choice is intended to combine easily and elevate the design through coherence.

Mosaico: Hoja Pentagonal

Mosaico: Pared Celular

Applied Compositions

APIS turns the wall into a composition with presence, rhythm, and sophistication. These visualizations present only some of the many ways it can inhabit a space, revealing its ability to adapt to different home environments with a warm, contemporary, and versatile aesthetic.

Canopy Concept

Canopy transforms the upper plane into a visual and sensory experience.

These are suspended panels that float above the space, bringing texture, rhythm, and a serene presence that redefines the atmosphere. Their light, sculptural language makes it possible to create compositions that soften the environment, visually organize it, and elevate the perception of the interior.

Canopy Dynamic Shapes

In ceiling applications, Canopy can also become a more expressive element: in addition to the flat format, it offers shape variations that generate rhythm, layers, or suspended pieces that bring design and atmosphere, while maintaining the same practical installation logic and curated options.

Canopy Colors

Serene Cornflower

Midnight Iris

Vivid Poppy

Ivory Magnolia

Cocoa Dahlia

Green Orchid

Smoky Pansy

Golden Sunflower

Sunset Calendula

Bicolor Hydrangea

Palettes and pigments

Canopy is available in the same color palette as Flex: a curated selection of tones designed to integrate naturally with different interior languages. From soft and luminous shades to deeper and more enveloping accents, each color highlights the panel's texture and makes it possible to create suspended compositions with character, balance, and sophistication.

Canopy Compositions

One of a Kind Work - Atelier

Atelier is ReBío's most exclusive line: a one-of-a-kind piece created specifically for your space. Here, you do not choose from a catalog - we co-design with you an unrepeatable piece, defining composition, scale, texture, and details so the result is truly yours and works with the architecture, light, and intention of the project.

Each panel is born from a handcrafted process and plant-based biomaterial, so the finish has depth, natural variations, and a presence that feels closer to art than to a standard product. Atelier is for projects that want a signature: a design gesture with history, coherence, and character, made to last and to be remembered.
