

Too busy making things to go find more work?

You'd rather be on the shop floor than chasing quotes. So the quotes don't get chased.

122+

PROVEN AI USE CASES
IN MANUFACTURING

4 manufacturers. · **1** week. · **~\$5M**

in qualified opportunities their teams never had time to find.

Matched to each manufacturer's capabilities. Pipeline created, not revenue captured.

THE CAPACITY CEILING

RFQs piling up

Quotes sitting in inboxes because nobody has time to price them and follow up.

Tenders expiring unseen

Government is buying what you build, but opportunities close before you ever see them.

Prospects going quiet

Interested buyers who never got a follow-up because your team ran out of hours.

Customer updates not sent

Existing customers who haven't heard from you in months. Relationships fading on autopilot.

Orders tracked by memory

Status lives in someone's head or a spreadsheet. When they're out, nobody knows what's where.

Invoices aging quietly

Receivables growing because chasing payments is nobody's primary job.

"We know what we can make. We just don't know who needs it."

A precision tooling shop with aerospace capabilities but no way to find the right buyers

"I spend my whole day quoting and making. There's nobody left to go find work."

A growing shop where the owner does sales, production, and everything in between

What if you had your own AI system? One that understood your capabilities, knew your market, and went out and found the work for you. No new hires. No software to learn. **Your team approves outcomes instead of chasing inputs.**

Your business. Your AI.

Each manufacturer gets their own system, built around their capabilities, customers, and market. Not a template.

Built on 122+ real use cases.

We researched what actually works in manufacturing AI before building anything. That homework is why these systems get results.

You pay when it works.

No retainers. No consulting fees. Your AI finds revenue, or you don't pay.

Hitting this ceiling yourself? If you're under 150 employees and your best people are buried in quoting, follow-ups, tenders, customer updates, and collections, your own AI system can probably help. Know someone who fits? Send them our way.
