2.4mm Herbert Screw

3.0mm Herbert Screw

The proven basic geometry of the HBS screws has been retained. HBS screws are available in the 2.4mm and 3.0mm dimensions, non-sterile packed. In addition, users can now select among screws with different thread lengths:

2.4 Headless Compression Screw

CODE : BT134.T24

LENGTH : 12 mm to 30 mm (2 mm Variation).

3.0 Headless Compression Screw

CODE : BT134.T30

LENGTH : 12 mm to 40 mm (2 mm Variation), 45 mm & 50 mm

Moreover, all screws are self-drilling and self-tapping and the diameter of the guide wire has been increased. To facilitate explantation, the screws now feature a reverse-cutting distal thread.

Fully threaded
Constant pressurization during fracture healing

Continuously variable thread pitch
Gradual compression during screw is advanced

Sectionalized thread
Relief over-compression and increase pull-out strength

Helical relief flutes
Facilitate screw implantation

Self-tapping
More screw insertion convenience

Rear design
Deepened torx/hex sink lessens screw strips risk & inflated tail prevents screw from over insertion

Cannulated
Improve screw insertion accuracy
