

SHOP & SUPPLY

Lag:  

Founded 45 years ago by the joint initiative of three brothers, Ozkara Hidrolik began as a small workshop and has since evolved into a leading distributor in the hydraulic industry. After the brothers' mutual separation in 2002, the company continued to operate under its current name, expanding its reach as a regional dealership for various brands across Turkiye.

Today, we proudly serve both domestic and international customers, sharing our extensive knowledge and experience through two distinct departments. Our Hydraulic Department is reseller of World known hydraulic brands such as Rexroth, Linde, Kawasaki, and Danfoss, specializing in the wholesale import and sale of original and subsidiary parts. In addition to our distribution services, we offer project design and revision services through our state-of-the-art hydraulic test center, ensuring comprehensive testing processes for our clients. We cater to leading companies in Turkey's mining, marble, construction, and excavation sectors.

Our production department manufactures spare parts for industry giants such as Caterpillar, Volvo, and Komatsu under our O.H.P brand, reinforcing our commitment to quality and innovation in the machine industry.

We look forward to continuing our legacy of excellence and supporting our customers with superior hydraulic solutions.

To better serve our international customers and accommodate the rapid growth of our product portfolio and export figures, we initiated a new organizational structure three years ago. We established a platform, www.shopandsupply.com, to facilitate more effective and active sales of both our manufactured products and imported goods worldwide.

Shop & Supply operates as an e-commerce platform in the heavy machinery spare parts sector. Our site allows you to add products—whether branded or from our own OHP line—directly to your cart based on the part numbers of well-known machine manufacturers. Once your order reaches our system, your regional sales representative will provide you with a quotation containing updated stock and pricing information within 24-48 hours via your customer panel. This panel also enables you to communicate with your sales representative regarding inquiries, measurement requests, and photo requests, while allowing access to your previous orders and discussions. If you find the quotation satisfactory, a Proforma invoice will be sent to you through the system for payment processing. As soon as we receive your payment confirmation, your order will be prepared, and tracking information will be provided based on your chosen shipping method.

Currently, Shop & Supply offers over 5,000 products. However, due to our expanding supply network and production portfolio, not all products are fully listed on the platform yet. Therefore, we have included a Request page where you can submit inquiries based on specific part numbers or production needs. You can also reach our customer representatives directly via a WhatsApp icon on our page to send your request lists. We are committed to providing a seamless shopping experience and look forward to fulfilling your hydraulic parts needs efficiently.

IN SHORT,
WWW.SHOPANDSUPPLY.COM
OFFERS A COMPREHENSIVE
SOLUTION WHERE ALL YOUR
NEEDS ARE SOLVED IN ONE PLACE.

WHY ARE PRODUCTS LISTED UNDER TWO SEPARATE MENUS?

You see products listed under two separate menus on our site because we offer you both original products from well-known manufacturers in the industry and OHP-branded items sourced from our own manufacturing facility and Turkish subcontractors. This allows us to provide you with a diverse range of alternatives to meet your needs.

Branded Products

In this menu, you can find our stock of original, OEM, and industry-recognized branded products. We have categorized these items both by their application in machinery and by brand, making it easy for you to select the desired products beyond just part number searches.

You can find part numbers and products under the relevant brand categories for globally recognized machinery brands such as Caterpillar, Volvo, Komatsu, Hyundai, and JCB. Additionally, we offer products from leading manufacturers in the heavy machinery sector, including Rexroth, Kawasaki, Danfoss, Linde, Berco, and many others, which are also available under their respective reference codes. The branded products category primarily features hydraulic pumps, hydraulic motors, brake units, filters, as well as sub-assembly components like chains, shoes, and rollers.

OHP Products

With the expansion of our product range, we initiated the branding process and created the O.H.P spare parts brand. Over the years, we have compiled a comprehensive archive of thousands of items, including technical drawings categorized by part numbers based on your requests and samples. It's important to note that OHP is an aftermarket spare parts brand and is not affiliated with original manufacturers. However, we have a robust quality program designed to create the best alternative part solutions for original components. This means that all products purchased under the OHP brand can be used safely in your machinery for many years. The O.H.P spare parts menu primarily features hydraulic cylinders, mirror shaft assemblies, hub gears, pins, axle components, differential parts, transmission components, undercarriage parts, and more. You can order these products in the quantities you need. For items not currently in stock, your customer representative will provide you with information on production time and pricing as soon as possible.
