## Value Propositions

### Interactive Device

- Real-time alerts for abnormal results
- Notifications for completion of the test
- Notifications for connection errors

### Wireless

- Portable kit enables on- Field testing
- Wireless probes bring convenience while performing the test

### Remote Monitoring

- Monitor NST/CTG test results from anytime/anywhere

### Digital Records

- Unlimited record storage
- Sharing via WhatsApp, Email etc

### A4 Paper Printing

- Long lasting
- Cost effective

### Auto-Interpretation

- Auto-Interpretation decision support tool
- Saves 3-4 minutes per test

## Testimonials

“Fully satisfied and grateful for this product. Fetosense has increased efficiency with added convenience. The device is wireless, portable, smartphone-based and with its report-sharing features, it is a savior for us in critical situations. It also enables better augmentation during labor. TRUE PATIENT CARE!!” ..... - [Dr. Vijay | Aai Maternity Hospital](#)

“I’m an early adopter! I seek innovative products with advanced technologies. I was looking for ambulatory products which could help patients even if they were not sleeping during labor. Fetosense is reliable & proves just the right t. My earlier machine had issues with wire, which demand around Rs.15,000 maintenance, other costs of paper and tests were Rs.1200 per roll. The wireless nature of fetosense is just great! I can see the reports on the app, on WhatsApp, and even print them. Better monitoring and live trial just saves the day! Thanks, Fetosense!” ..... - [Dr. Mugdha | Waman Ganesh Clinic](#)

“The majority of users at my facility are nurses and they are comfortable using Fetosense. With its easy-to-use feature and after test results, they show the graphs on the same tablet. Even if I’m not in the hospital, they share the reports through WhatsApp which saves time and increases efficiency. Amazing support provided from time to time. I have zero complaints about the device!” ..... - [Dr. Archana | Thombare Hospital](#)
