

MONALISA

Who we are

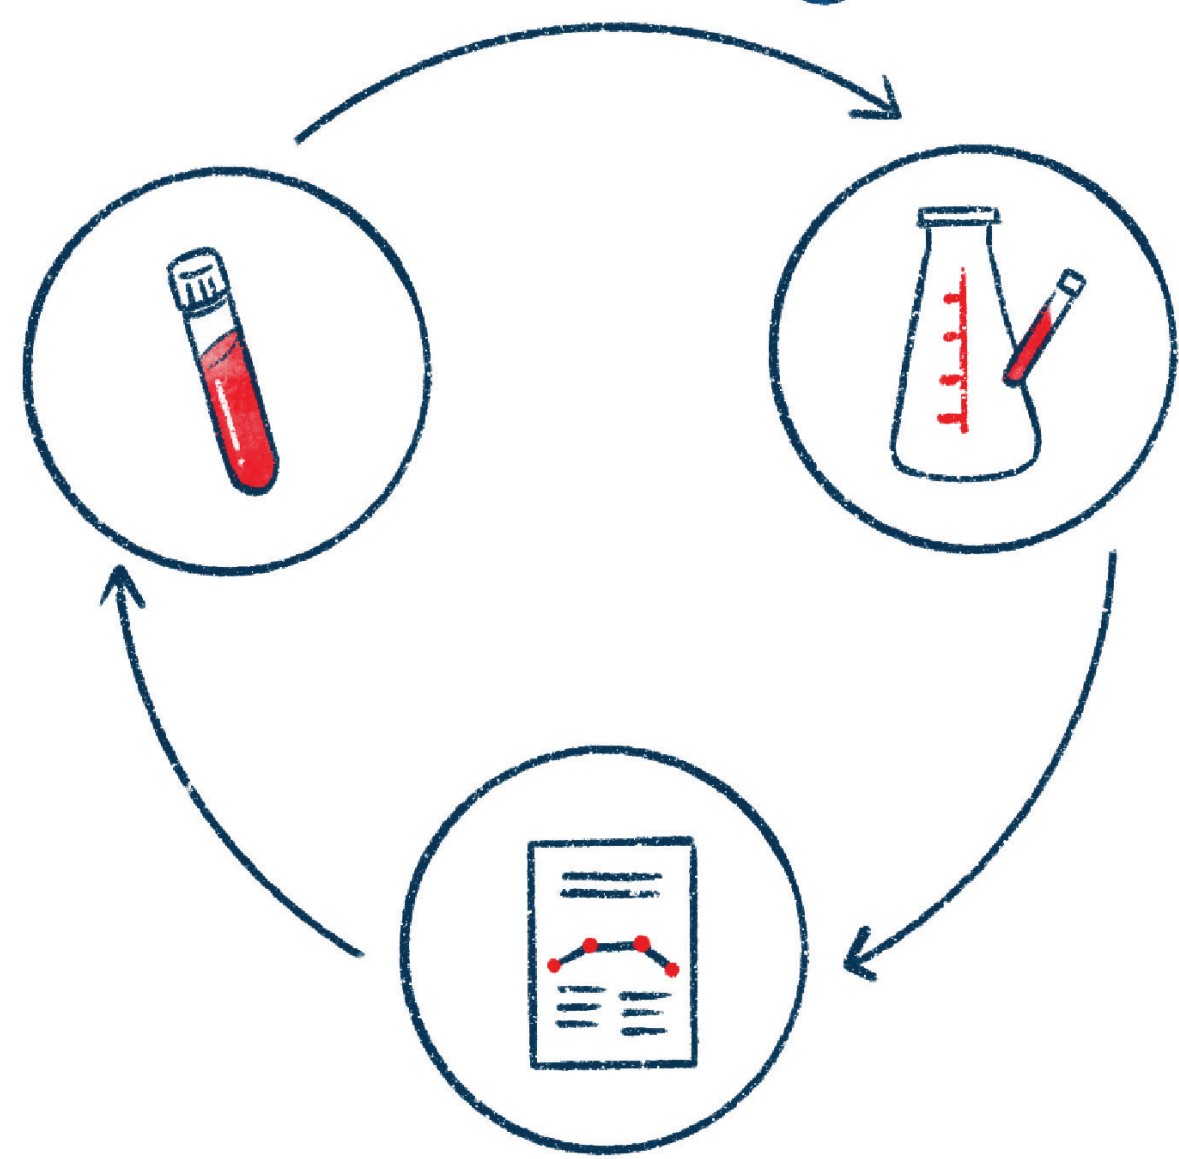

MONALISA unites 25 institutions across 11 countries to improve neuroblastoma relapse monitoring through liquid biopsy, clinical research and patient-centred expertise.

What we are working on

We test whether sensitive blood-based liquid biopsies can detect neuroblastoma relapse earlier, while evaluating patient experience and quality of life.

What's the one thing we need next

We need strong hospital commitment to recruit 150 at-risk patients across 11 countries and validate liquid biopsy for relapse monitoring.
