

APPLICATIONS

Our fields of expertise

INDUSTRIES

Our solutions and products are adapted to industrial problems. We frequently manufacture tailor-made modules according to your needs

CROPS AND LIVESTOCK

Our goal is to enable you to reduce, or even to eliminate completely the use of chemicals from your production (agriculture, horticulture & aquaculture).

MEDICAL

We offer products suitable for medical environments. Thus, we can guarantee optimal hygiene to minimize the risk of infection and disease transmission.

DOMESTIC / POOLS

Our products fit to your personal needs. Our water treatment systems allow you to enjoy your facilities without risks to your health and the environment.

Why choose us ?

UVRER is the 1st french company to have used UV for water treatment

French quality at the right price

+40 years of expertise, and **ensuring optimal Spare Parts follow up**

A wide choice in **stock**, always available

Express delivery ensured for all your orders

Tailor-made manufacturing

UVRER

Who are we?

UVRER is specialized in ultraviolet light treatment for fluids & surfaces since 1982. Designer & manufacturer, all of our treatment solutions come from industrial research & french universities. Our mission is to provide our customers tailor-made solutions adapted to their specific needs.

UVRER is the first company on the French market to have used UV for water treatment

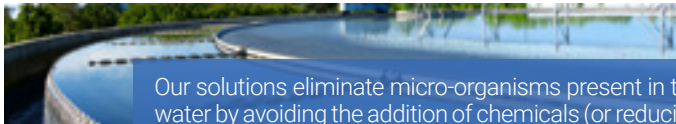

French quality at the right price

A dedicated design office, offering you **turnkey solutions**

Water treatment for industries

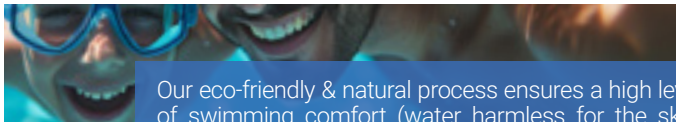

Our solutions eliminate micro-organisms present in the water by avoiding the addition of chemicals (or reducing their use).

Water treatment for private use

UV-C technology ensures perfect water quality. It can be used to disinfect spring water, borehole water, to reuse rainwater safely.

Water treatment for pools

Our eco-friendly & natural process ensures a high level of swimming comfort (water harmless for the skin, without pH modification, ideal for indoor pools).

*Together, let's write
the future in blue*

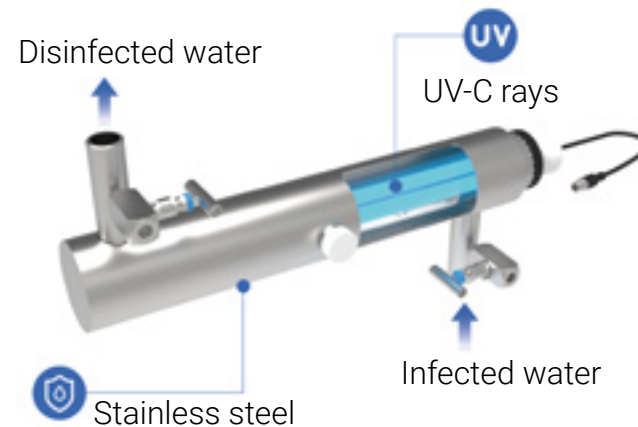

Water treatment

Our know how

Ultraviolet radiation has the capacity to **destroy germs** (microbes, viruses, bacteria, fungi, mold, etc.) in fluids and on surfaces. This is because **UV-C radiation crosses the cytoplasmic membrane** of the cell and enters the nucleus.

When cells are divided, DNA is unable to replicate or reproduce itself. The molecular structure of DNA is thus broken and renders the germ harmless, **without modifying the physicochemical criteria** of the fluid and without generating residual pollutants. Ultraviolet treatment is an **ecological solution**.

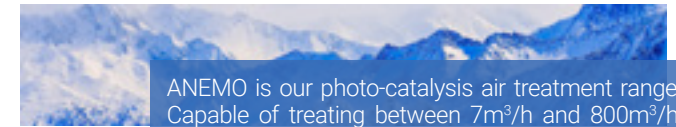

Our technology

Air treatment

Our know how

ANEMO

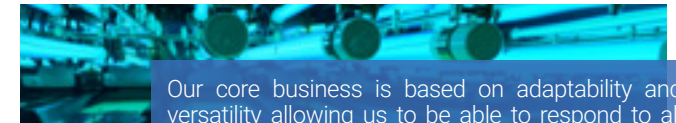

ANEMO is our photo-catalysis air treatment range. Capable of treating between 7m³/h and 800m³/h, it operates without chemicals. Our complete range helps limit contamination in all types of spaces while meeting the growing needs related to air quality.

Siluxe 50

Surfaces disinfection

Our know how

Our core business is based on adaptability and versatility allowing us to be able to respond to all types of disinfection issues, with the design and manufacture of 100% tailor-made devices adapted to your specific needs.
