Hybrid Batteries for Electric Mobility

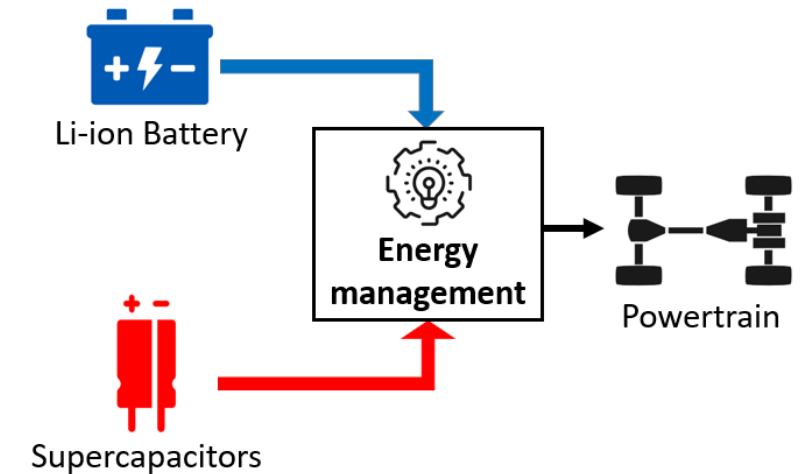

#Energy

#Li-ionBattery

#ElectricMobility

OptHySource offers to couple Li-ion batteries with supercapacitors, with the aim of improving battery **sizing**, **performance** and **lifetime**, and therefore the **total cost of ownership**.

This coupling is made possible thanks to a **patented EMS** (Energy Management System) enabling **optimum** power sharing between the battery and the supercapacitors, with the aim of **limiting stress** on the battery.
