Business Case

ONELOGISTICS COMPANY BUILT FOR THE 5TH GENERATION F-35 & F135 ENGINE

Established in 2006, OneLogistics was specifically setup to support the F-35/F135 program dealing with European rules, regulations & complexities impacting the F-35 supply chain.

By combining the best staff with IT technology and a profound knowledge of global logistics, warehousing, transport, customs, compliance, (cyber) security enables us to provide agile, flexible and scalable solutions we delivered "best value".

These "best value" integrated sustainment supply chain solutions are developed in close cooperation between the Dutch Government, Knowledge institutes and logistics industry. A seamless cooperation delivering innovative supply chain solutions from a central and well accessible location in Europe: the Netherlands Warehouse, transport-, customs & compliance management is integrated in the OneLogistics control tower solution. This included supply chain simulations, value chain mapping and detailed studies on how to positively impact metrics and KPI's in a high velocity Performance Based Contracting environment.

F-35 SUPPLY CHAIN SIMULATIONS AS BASELINE FOR 5TH GENERATION LOGISTICS SOLUTIONS

In order to demonstrate our capabilities and thorough understanding of large and complex programs we have designed 15 F-35 supply chain scenarios. These scenarios contain all relevant regional issues that require specific attention in order to guarantee the PBL metrics. The scenarios are available in our blueprint-guide

"the F-35 Demonstrator OneLogistics Information Guide". Much attention has been given to the global F-35 logistics in relation to European Regional logistics, the collaboration with the Primes JPO/PSI, the organization form, organizational processes, company strategies, partnership processes, the provision of information, business continuity, users' perspective, users' needs, customer wishes and much more. In this context, the NLMOD and the staff of OneLogistics has conducted research into the expectations of European stakeholders and the associated goals or metrics/KPIs. What do Warfighters expect and what is important to them in the entire logistics process has been clearly illustrated.

REGIONAL WAREHOUSE "LIVE", ONELOGISTICS DELIVERS THEIR PROMISE

OneLogistics is appointed in 2017 by the F-35 Joint Program Office as F-35 Regional- and F135 Multiuse Warehouse. After a sound standup process with Lockheed Martin, Pratt & Whitney, Joint Program Office and Netherlands MoD the warehouse was opened in November 2019 by the JPO PEO Program Executive Officer.

The F-35/F135 (bonded) warehouse supplies both the European Region (F-35 Partners and US Services) as well as the F135 engine MRO&U depot with parts. This includes the customs- and inward processing handling of F135 parts. This includes compliance with EU customs regulations as well as SOFA/302's.

The OneLogistics staff works seamlessly with the NLMOD staff that operates the warehouse at Logistics Center Woensdrecht. Through an innovative continuous improvement program, we ensure "best value" and focus on availability of parts and a for all F-35 Stakeholders and affordability to the F-35 program.

Our Value Proposition

INTEGRATED LOGISTICS SOLUTIONS

We provide integrated supply chain solutions designed for complex industries such as aerospace, defense, med-tech & life sciences with full focus on affordability, availability, scalability, agility, compliance & innovation. OneLogistics supports you with regional (bonded) warehouse & logistics services. delivering innovative supply chain solutions. Warehouse-, transport-, customs-, compliance- & performance management are integrated in the Control Tower solution of OneLogistics. Fast, efficient, safe & secure integrated logistics services based on a Control Tower with screened staff

EUROPEAN CONTROL TOWER

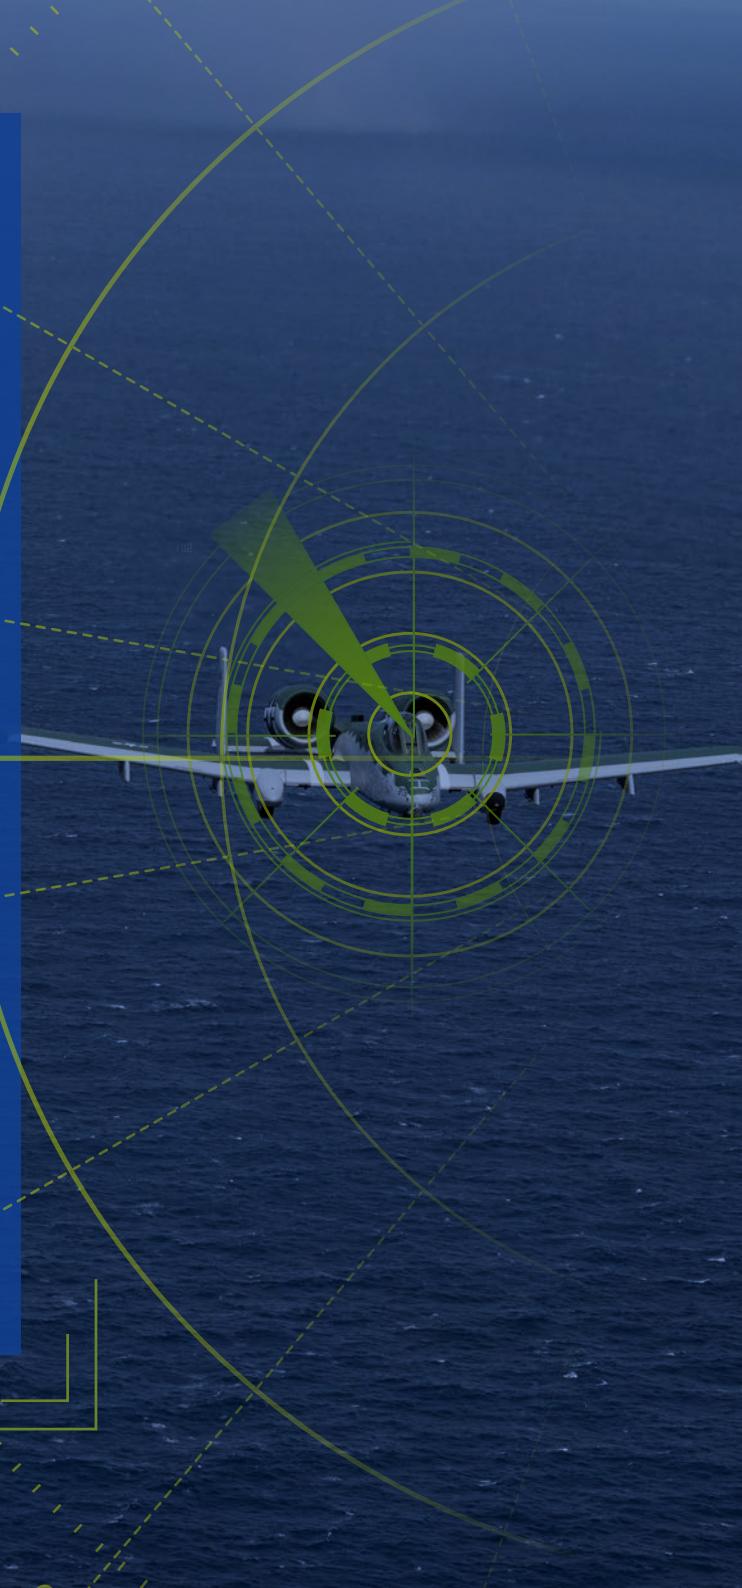

To operate in Europe, "control" is key. Regional supply chain control & coordination deals with the European complexities and ensuring parts can be shipped to your (European) customers, 24/7, fast and reliable without delays. This way you can operate in the European time-zones and meet & exceed your customers expectations. We guarantee a bespoke value chain & control tower with transparency, optimized (logistics) costs, availability of part, reliability and maintainability of your assets. Our OLS system is seamlessly interfaced with your ERP system. Plainly stated, OneLogistics offers total asset visibility.

WE SIMPLIFY COMPLEXITY

Dealing with all European warehousing, transport rules & regulations and customs compliance. Using the appropriate service providers, lead-times and transport modes to ensure affordability and delivery accuracy. OneLogistics has a database (LCC-Logistics Capability Catalogue) with +50 qualified logistics service providers, trucking companies, warehouse and customs brokers. Supplying the European region, we optimize and reduce logistics costs and have the right spares in the right location. We ensure affordability while availability of parts is guaranteed through an undisturbed supply chain. We simplify the European complexity so you can deliver your promise to your (European) customers.

THE BRIDGE TO SUPPORT EUROPE

Europe is our "home turf" and we can support your company in all the rules, regulations and red tape. Our Team has been dealing with these complexities for decades and is at your service 24/7. OneLogistics provides decades of logistics expertise, European networks and -contacts. You can tap into this expertise and network and "hit the ground running". We act as your Importer/exporter of record and fulfill all European customs, VAT and compliance activities. In combination with our OLS System this is an innovative approach to performance-based logistics and boosts the effectiveness of your supply chain. Buy performance and a network, not parts or services.

Our Customer Benefits
