

# Agent Impact

## Managed AI Agent Systems for Manufacturers

Most Industrial AI focuses on the factory floor. We focus on the office: the quoting, procurement, AP/AR, customer follow-up, tender response and strategic work that drives financial results but never gets enough attention because your best people are buried in production. Purpose-built for small and mid-size manufacturers with 20 to 150+ employees.

## Solutions

### Company World Model

A living knowledge graph of your capabilities, certifications, market position, and relationships. AI agents work from this model, and it gets smarter with every agent action, every new data source, and every bit of feedback.

### Managed AI Agents

Agents that handle the commercial and administrative work your team can't get to: quoting, tender monitoring, customer follow-up, order management, collections, and more. All operating from the world model.

### Navigator Engagements

AI readiness assessments and roadmaps that become living artifacts, updating themselves as the system learns your operation. Not a one-time consulting deliverable.

### AI Use Case Explorer

Searchable database of 122+ validated AI use cases from real manufacturer implementations. Free to explore, backed by real outcomes from companies like yours.

*"We were notorious for reacting rather than being proactive. Not anymore."*

President, Precision Manufacturer, Ontario • Agent Impact Cohort 1

## Who We Work With

### MANUFACTURERS

Discrete and continuous manufacturers with 20 to 150+ employees across North America. Companies where the best people know exactly what to do but don't have the hours to do it all.

### DATA & TECHNOLOGY PARTNERS

Platforms that generate operational data (MES, ERP, production monitoring) and can enrich a manufacturer's AI world model with deeper context.

### ECOSYSTEM PARTNERS

Manufacturing associations, industry clusters, EDOs, and innovation organizations interested in AI readiness programming, use case development, or agent deployment for their members.
