Company overview

We are a manufacturing venture company specializing in magnesium alloy processing. We develop production technologies to expand the potential of magnesium, such as extruding, drawing (cold drawing and die-less drawing), bending, and welding, also, develop and sell products that take advantage of these technologies and the properties of magnesium. We have a capability to produce high originality products by performing integrated process from the procurement of materials to several processing and painting.

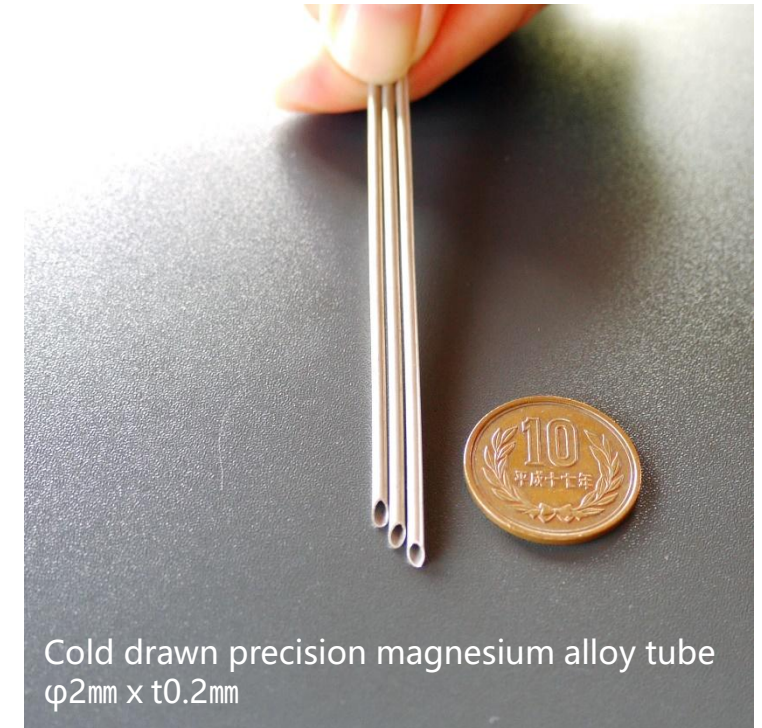

Products/ Services overview

Processed thin and precise magnesium tubes, wires and rods as biodegradable material for a stent, an implant, and others.

Potential business matching partners

Manufacture or R&D organization a stent, implant.

Cold drawn precision magnesium alloy wire $\phi 0.8$ - $\phi 4.0$ mm

Cold drawn precision magnesium alloy tube $\phi 2$ mm x t0.2mm
