

Clinical Assay Development Services (CADS)

We offer a uniquely comprehensive portfolio of technology development, manufacturing and logistics that enable us to support every step of your clinical assay development, from conception to delivery.

With CADS, you will benefit from:

- Deep knowledge of core technologies
- Control over supply chain and quality assurance
- Seamless delivery pipeline
- Scientist-to-scientist collaboration
- Range of development capabilities
- Mature design control and documentation

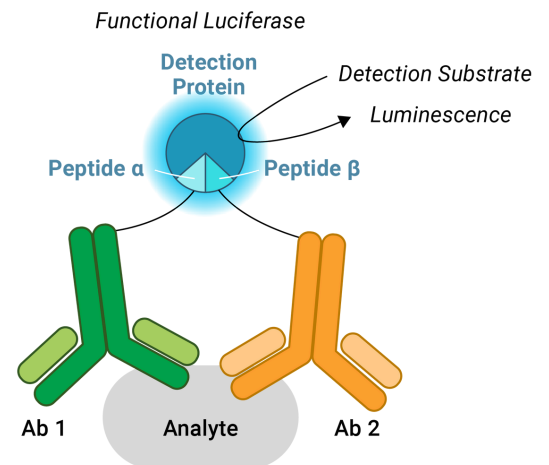

Simplify your immunoassay protocols and accelerate time to results with our Lumit[®] Flex technology.

Lumit[®] Flex Technology

Based on our award-winning NanoLuc[®] luciferase and NanoBiT[®] complementation system, Lumit[®] Flex technology enables bioluminescence-based detection of specific antigens or antibodies, powering sensitive and accurate immunoassays for clinical applications.

Compared to standard rapid ELISAs, Lumit[®] Flex:

Demonstrates superior performance

Is lyophilization-compatible

Can be adapted to point-of-care testing

Requires no wash steps
