The Personal Cost of Fragmented Data

"After seeing my mom's cancer treatment impacted over a small detail, I realized how much of a difference having all the right information could make."

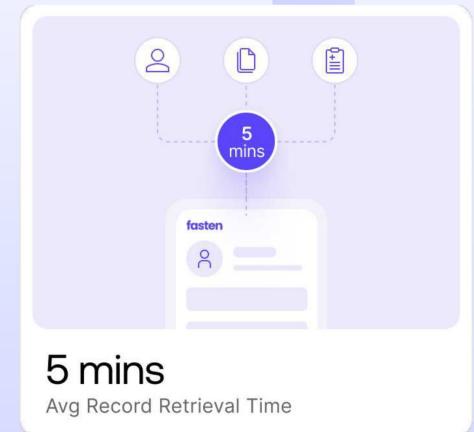

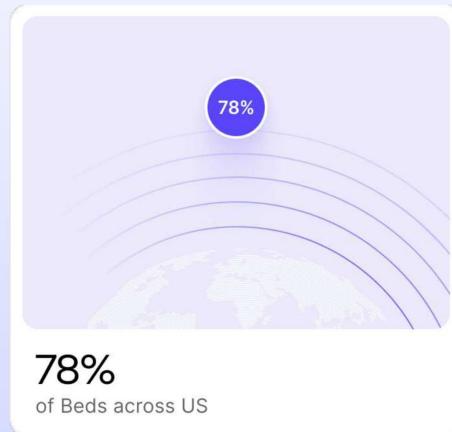

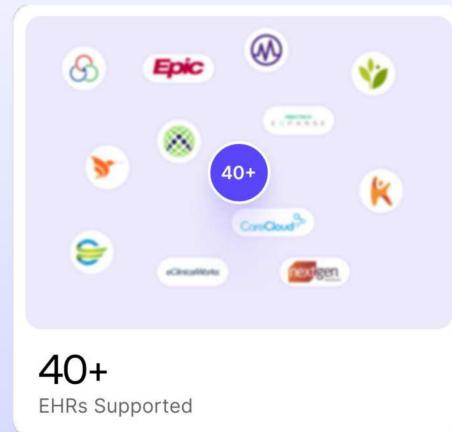

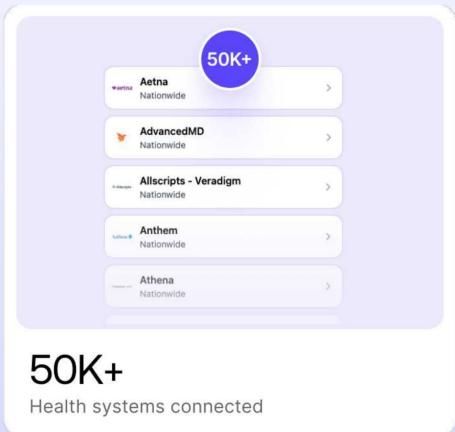

The Reality: In critical moments, missing medical history isn't just an inconvenience it's a life-altering risk.

A successful partnership with FastenHealth On Prem

A TEFCA certified initiative.

Epic ✅ @HeyEpic · Jul 3

Interoperability through TEFCA is empowering patients and developers alike.

...

For ex: @fastenhealth—one of the first patient apps live on TEFCA—is helping consumers automatically access their own info from thousands of orgs without needing to remember every clinic or hospital they've visited.

For app developers: one connection is all you need to access the entire network, rather than registering with EHRs one-by-one.

Epic ✅ @HeyEpic · May 8

It's exciting to see organizations embrace the Trusted Exchange Framework and Common Agreement—TEFCA for short—a single on-ramp to secure, nationwide health-information exchange.

Since earning designated QHIN status in 2023, Epic health systems ...

The Healthcare Data Crisis

Fragmentation

Patients visit multiple specialists, labs, and hospitals. Their records are scattered across different portals, making a comprehensive view nearly impossible for any single doctor to see.

The Privacy Trade-off

Existing solutions often force a compromise: convenience in exchange for privacy. Cloud storage creates centralized targets for hackers and opens the door to tracking and data mining.

Your Records. On Your Device.

We're building a patient-first healthtech ecosystem. Our mission is simple: give people full control of their medical records, directly on their own devices.

1 No Cloud Storage

Everything stays private.

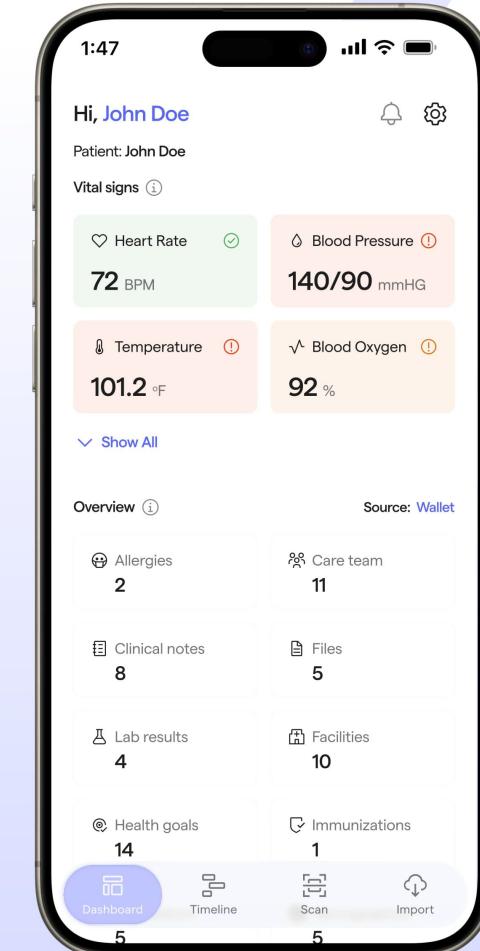

2 No Tracking

Zero compromise on privacy.

3 Biometric Security

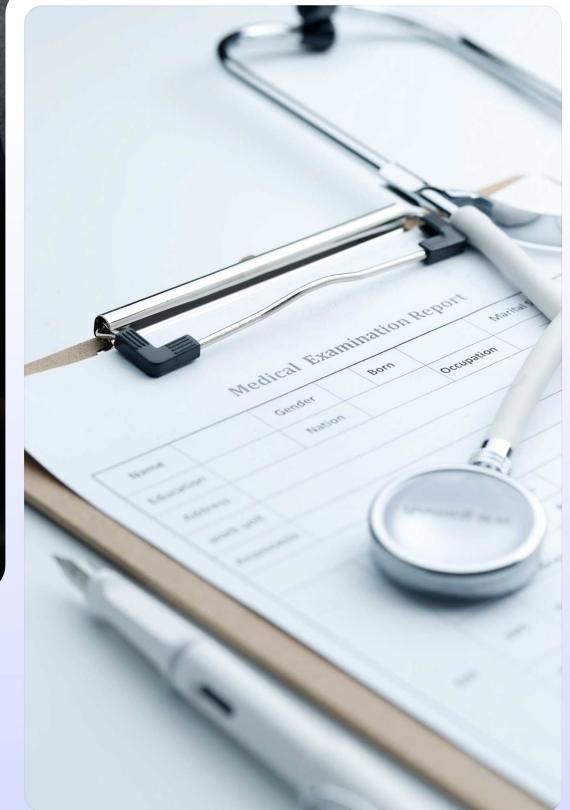

Your face or fingerprint is the key.

"Volvo open-sourced the seatbelt because safety shouldn't be a luxury. We built [HealthWallet.me](#) because your data privacy shouldn't be either."

Alex, CEO @ [Life Value](#)

Built for Trust & Access

Privacy First

A patient-controlled platform where medical data lives on your device, not in the cloud.

Open Source

Community-driven development ensures transparency, security, and continuous improvement.

Offline Capable

Access critical health information anytime, anywhere, even without an internet connection.

Technical Architecture

Self-Hosted Backend

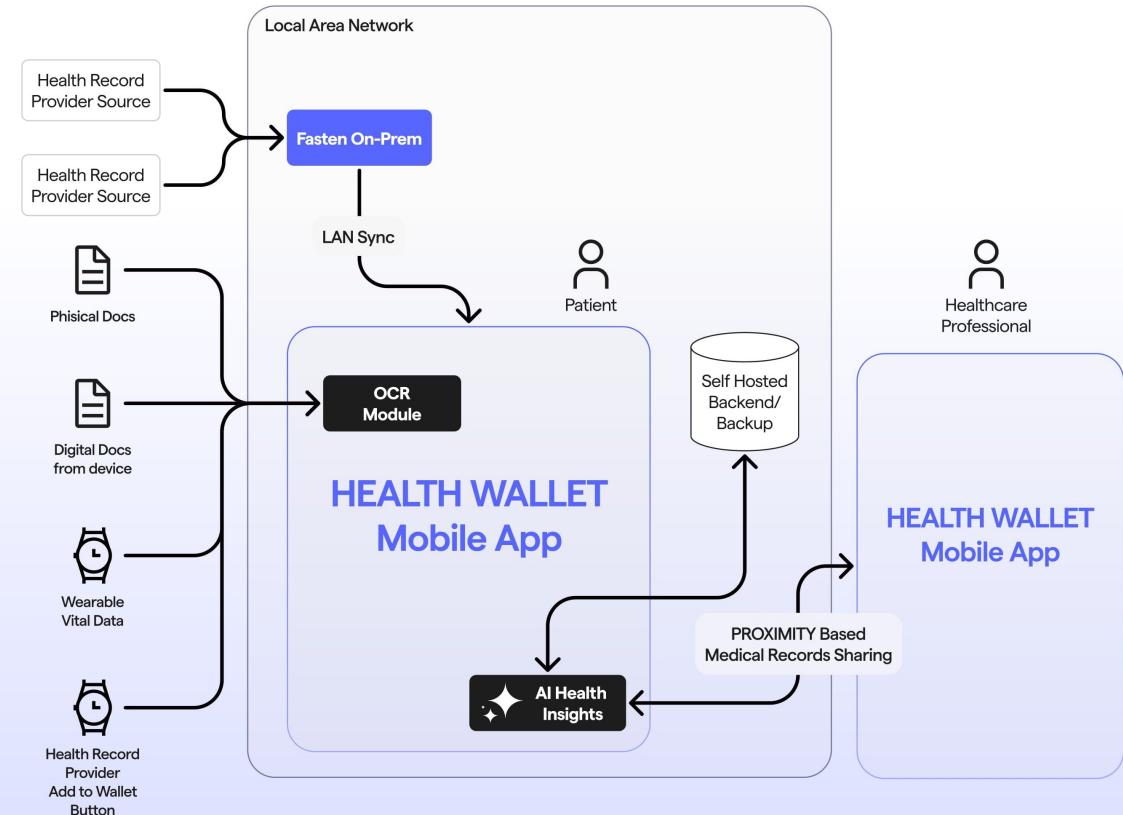

Users can run a self-hosted instance desktop app that aggregates records from providers.

Direct Sync

Data syncs directly from your secure backend to your mobile device via QR code authentication.

FHIR Compliant

Built on the Fast Healthcare Interoperability Resources standard, ensuring your data speaks the global language of healthcare.

Solving UNITE Challenge #1

The Challenge

A need for solutions that empower patients and ensure continuity of care.

Our Answer

By giving patients ownership of their data, HealthWallet enables true personalization. Patients can share accurate histories during remote consultations, bridging the gap between home and hospital.

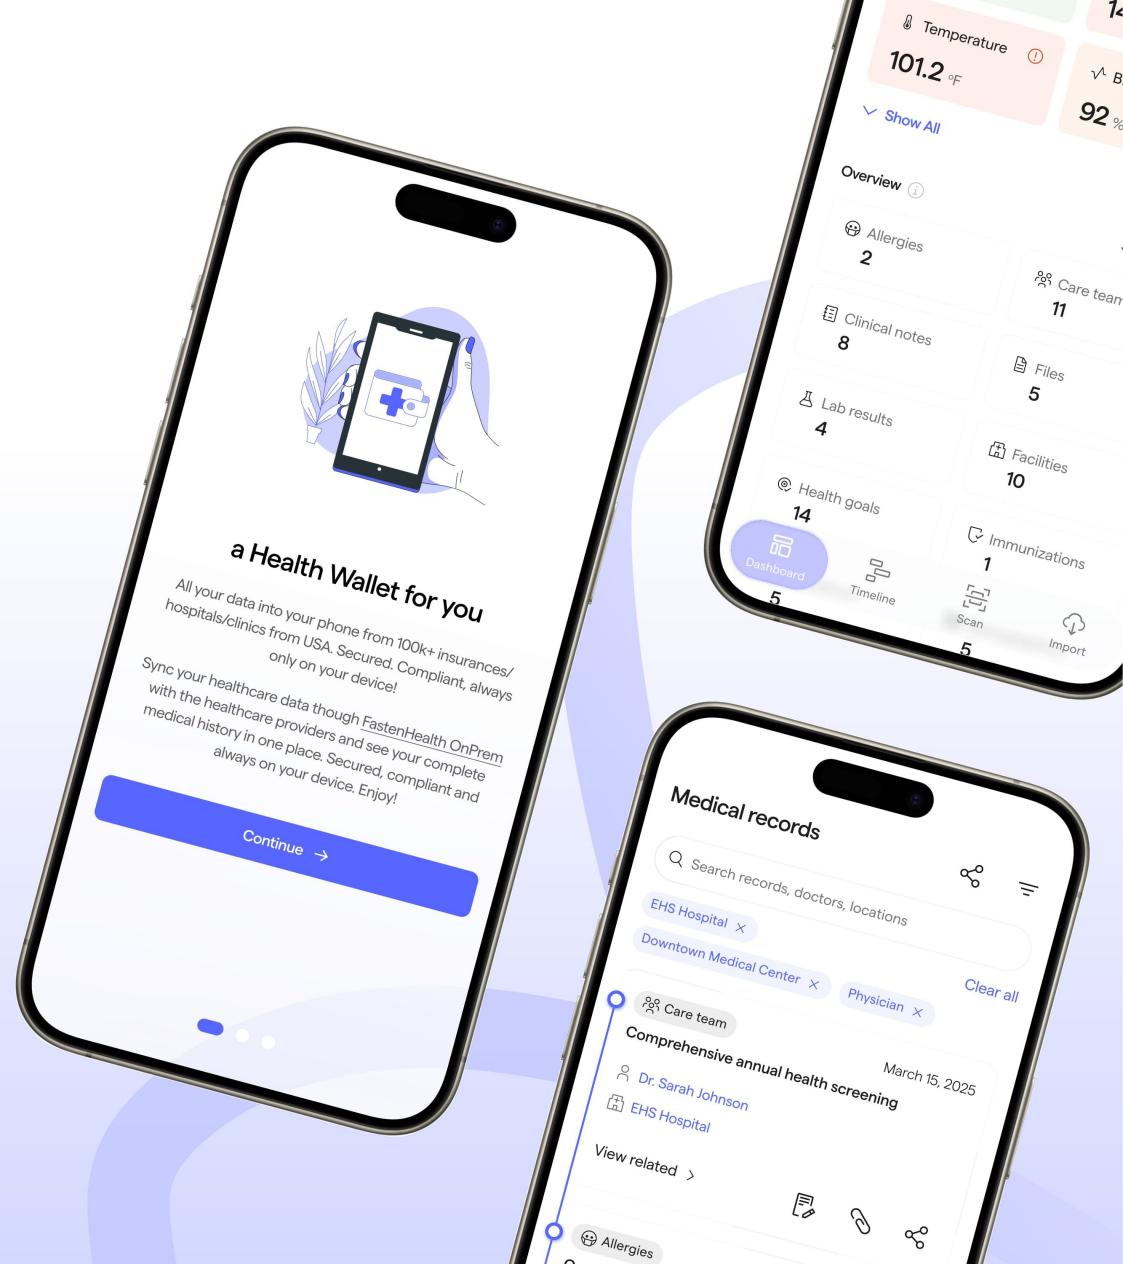

Solving UNITE Challenge #3

The Challenge

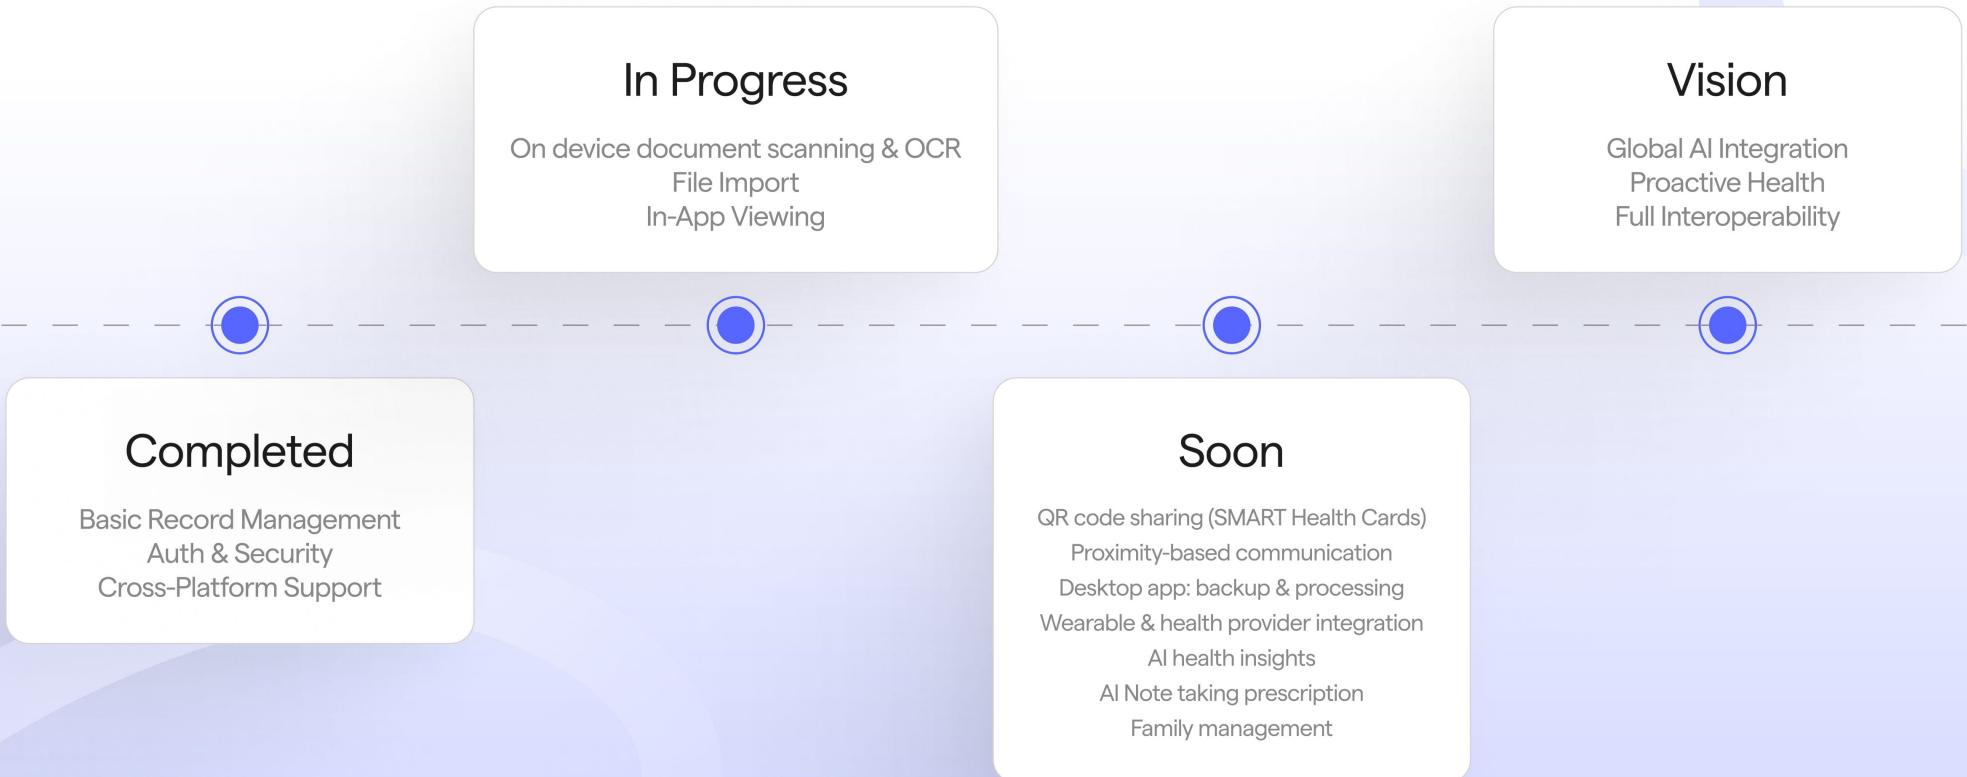

Advancing European Health Data Spaces (EHDS) and improving interoperability.

Our Answer

HealthWallet is FHIR-native by design. We solve the interoperability puzzle by creating a standardized, patient-held record that can move across borders, supporting the EHDS vision of seamless data mobility.

Product Roadmap

Peace of Mind

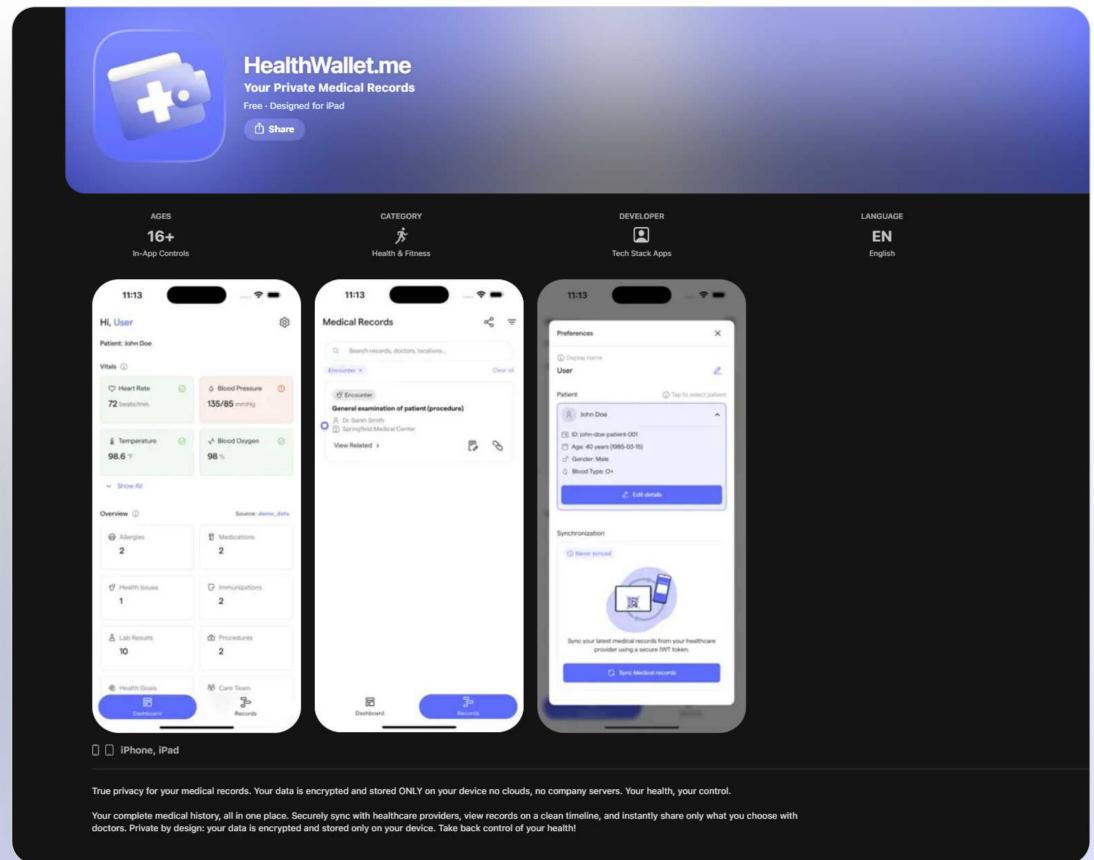

Your Health. Your Data. Your Wallet.

The image displays the HealthWallet.me app interface and its listing on the App Store. The store listing includes the app icon, title, subtitle, price, developer information, and language settings. The app interface shows a dashboard with vital signs (Heart Rate, Blood Pressure, Temperature, Blood Oxygen), medical records, and preferences. A QR code at the bottom of the store listing provides a direct link to the app's download page.
