

**TOBO**

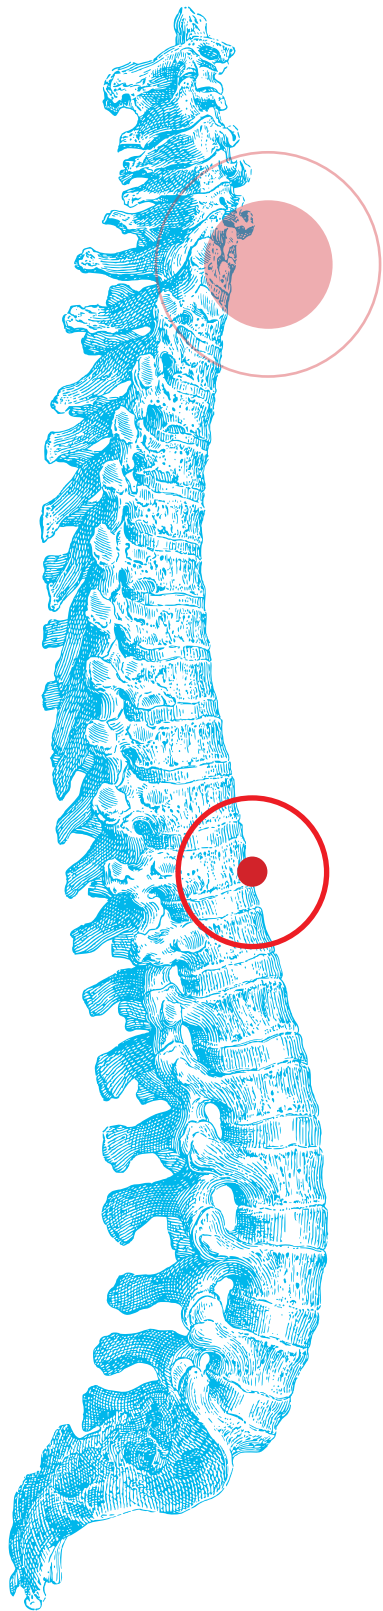

Health to Office furniture has become a finalist in the Good Design 2018 competition, organised by the Institute of Industrial Design in Warsaw. Thus, they were among the best designed products of 2018.

design: Dorota Ignatowicz

Expert opinion of IWP:

The series presents a unique level of ergonomics that also takes into account the needs of disabled employees. Low-emission materials that ensure the safety of staying in the room and easy-to-use height adjustment tops from the level of a computer application, allow you to shape the office space in a highly individualised way. The collection is also distinguished by aesthetics: simple forms with fashionable details and neutral colours give the furniture a modern character, the optics of light wood warms the arrangement and ensures the effect of cosiness.

Over 70% of users experience a physical discomfort in the workplace, and more than half of them complain about various types of pain, the most frequently indicated is back pain.

The position in which we work has a big influence on the pain. Incorrect sitting position causes about 40-90% more spinal strain than the wrong standing position. It is a force, acting on the third intervertebral disc, with a weight of 175-275 kg for a sitting position, and for a standing 150-200 kg.

The h2O system is based on desks with adjustable electrical frames connected to a computer application.

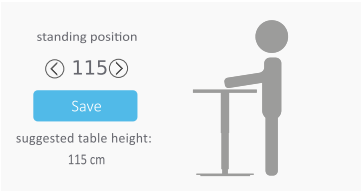

The user can set his or her individual work planner, determine how many minutes per hour he wants to work in a sitting and standing position.

- ☐ 5 min break after each hour of work
- ☐ exercise during break

Possibility to add a 5 - minute break and exercises during the break.

Change the height value in the sitting position using the arrows. After clicking the icon the desk will lower its height.

Change the height value in the standing position using the arrows. The desk will increase its height by clicking on the icon.

View current altitude, operating time and how long it will take to change position.

The columns of the frame are equipped with ZERO™ technology, which reduces the power consumption in standby mode from a typical 1-2 W level to just 0.1 W.

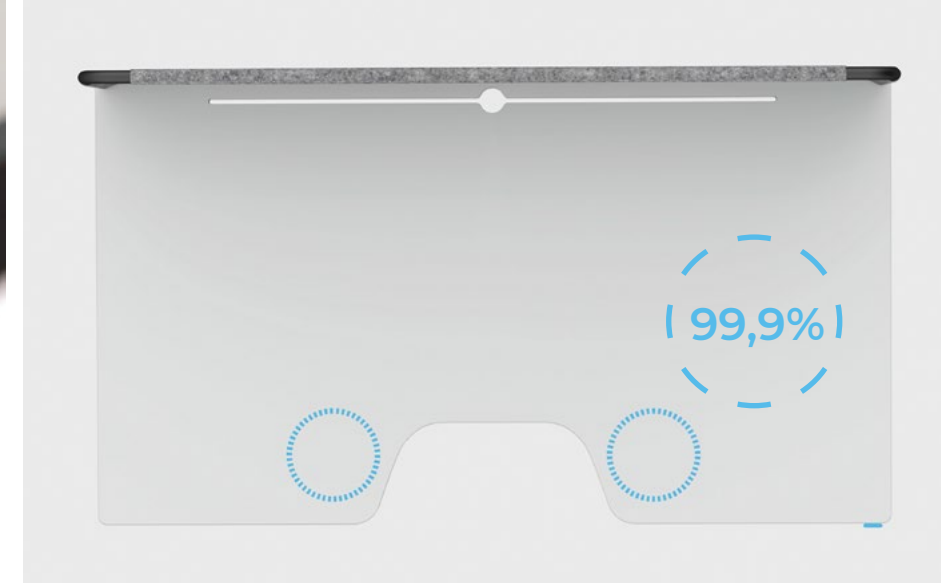

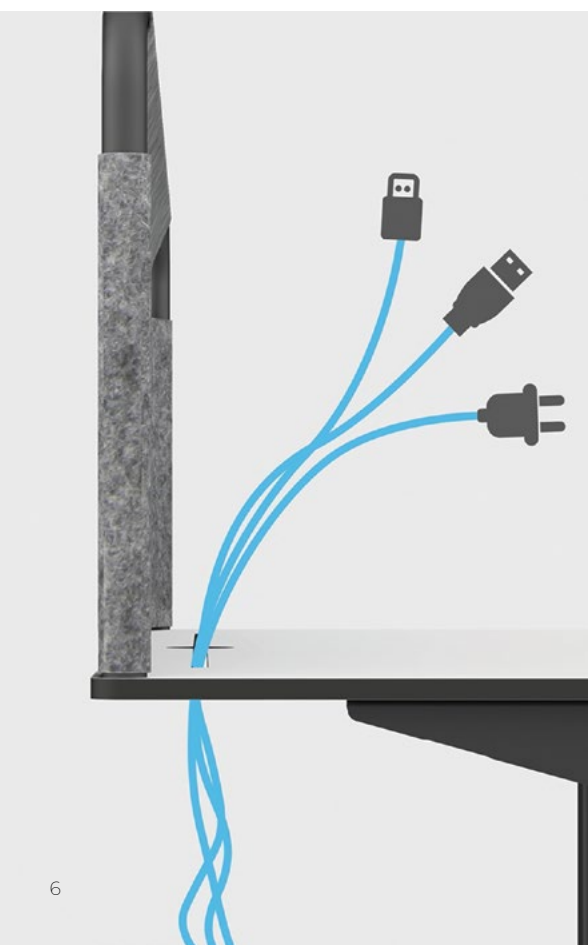

Desks on electric frames allow for height adjustment to individual user needs. The desk is additionally equipped with a remote control enabling height adjustment and a hole serving as a desk grommet.

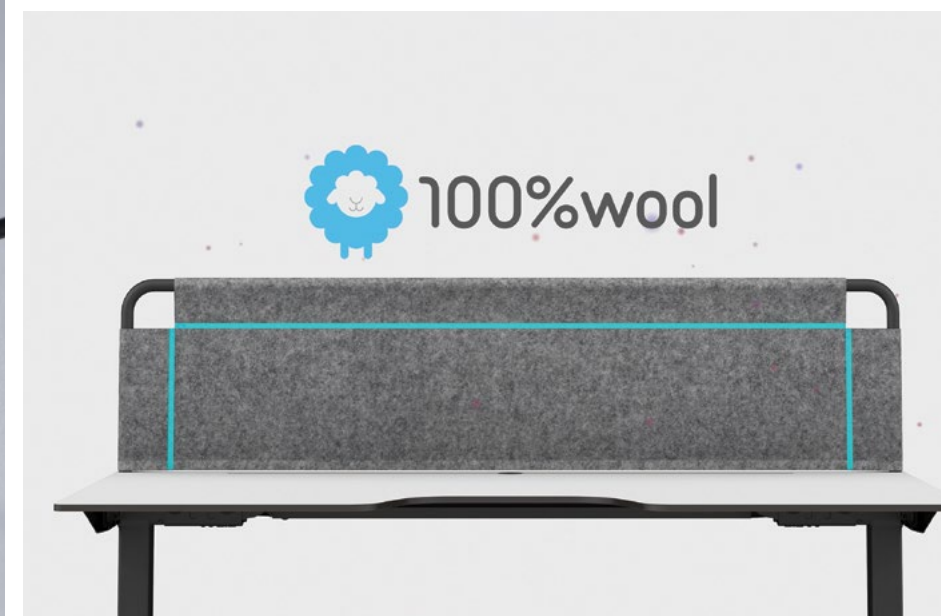

The desk top has an ergonomic cut-out, allowing for better elbow support.

The Swiss, certified Sanitized® coating permanently counteracts the growth of microorganisms. It kills up to 99.99 % of bacteria. The Sanitized® Silver coating is based on silver ions. It does not contain any silver nanoparticles.

In H2O furniture, HPL compact board with a certified Sanitized® antimicrobial coating is used at strategic points, such as desk tops and cabinet handles and handles for moving desks. As well as being antimicrobial, the board is also waterproof.

Upholstered elements and partitions of the H2O system are made of 100% wool fabric which, thanks to its keratin content, has a natural absorption capacity of formaldehyde and irritating odours from the environment.

The h2O furniture is made of three-layer particle board with minimized formaldehyde content in Japanese standard F\*\*\*\*, according to JIS A1460. This means that it has a formaldehyde emission of 0.03- 0.04 ppm, which is similar to natural wood.

The chipboard has the Blu Angel certification, focusing on minimising harmful effects on the environment.

The partitions are designed and manufactured so that they are easy to dismantle, which is easy to clean.

Handles made of HPL compact board enable the furniture to be moved comfortably from a seated position.

Pedestals and pedestals are equipped with metal drawers and a pencil drawer.

Cabinets on high racks, allow for easy cleaning and the use of cleaning robots.
