

Modular Belts

We are a **European manufacturer of plastic modular belts**.
Discover modern and easily integrable solutions for your business.

About the Company

Maxbelt Modular is a European manufacturer of modern and **easily integrable plastic modular belts** designed for conveyors used across a wide range of industries—from food processing to heavy industry. With our innovative solutions, we enhance the efficiency and reliability of production processes throughout Europe.

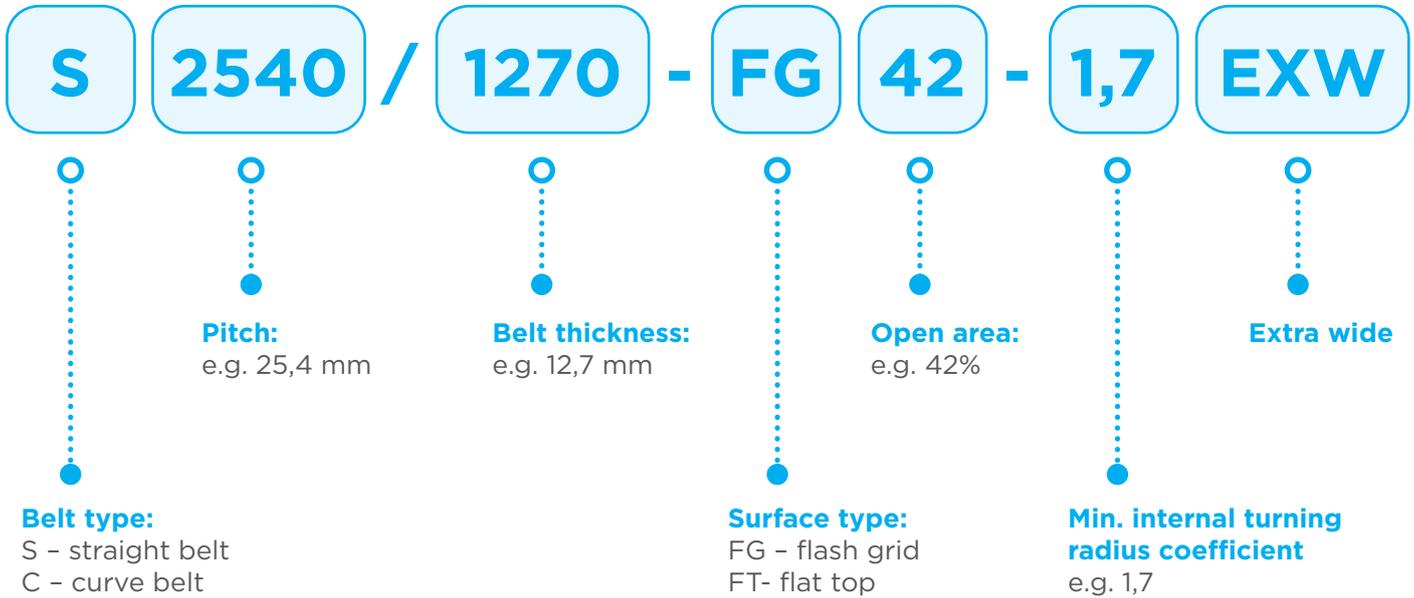

We are close to you.

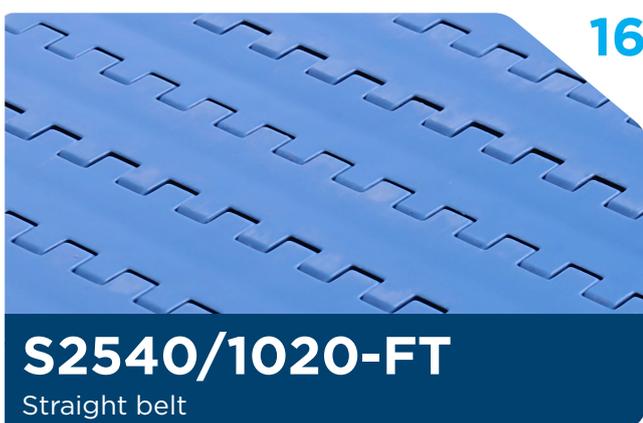

WE DELIVER AND SUPPORT

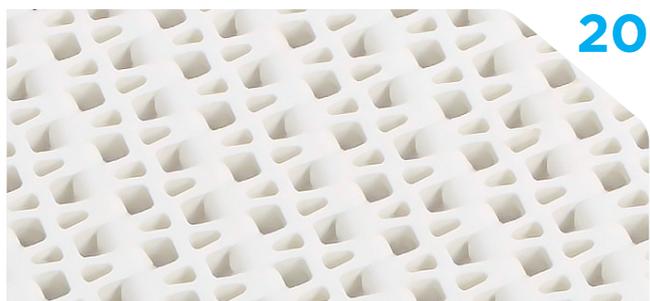

Thanks to our wide range of modern products, local production capabilities, and extensive sales and support network, we stay close to the needs of our European customers, providing them with the highest level of service and solutions tailored to their expectations.

Choosing the Right Belt

begins with selecting the appropriate material for its operating conditions.

Selecting the right material is key to ensuring the performance and reliability of conveyor systems in a variety of operating environments. The right materials provide unique properties that can be tailored to specific production requirements.

BASICS MATERIALS							
Production line		Colour	Temp. range		Key features	Chemical resistance	Applications
			min.	max			
easy	Polypropylene (PP)	 	1°C	100°C	 easy exchange	High	First choice for most applications
	Polyethylene (PE)	 	-60°C	60°C	 easy exchange	High	
	Acetal (POM)	 	-40°C	80°C	 easy exchange	High	
	Acetal (POM BIO)	 	-40°C	80°C	 easy exchange  environmentally friendly	High	
safe	AM - Silver	 	-60°C	80°C	 antibacterial	High	Food, meat, pharmaceuticals, personal hygiene products
	AM- Gold	 	-60°C	80°C	 bacteriostatic	High	
	Detect	 	-40°C	80°C	 metal detectable	High	
hi-temp	HeatGuard		1°C	120°C	 temp. resistance up to + 120°C	High	Baking, pasteurization, frying applications
	ThermoPro		1°C	180°C	 temp. resistance up to + 180°C	Fair	
	Duramid		-40°C	260°C	 temp. resistance up to +260°C	Very high	
strong	Strong HK	  	-40°C	80°C	 impact and abrasion  resistance	Very high	Cardboard production, cement industry

easy

Easy is a solution that stands out on the market for its versatility and compatibility. Designed with maximum ease of use and simple implementation in mind. Our solution has been developed with a focus on convenience and customer satisfaction, making the replacement process simple and fast.

Polypropylene (PP)

Characteristics:

Polypropylene is an ideal material for applications in positive temperature conditions. It is lightweight, crack-resistant, and has good chemical resistance. It is the first choice for most applications.

Example Applications:

Food industry, packaging, pharmaceutical industry.

Operating Conditions:

Polyethylene (PE)

Characteristics:

Polyethylene is an excellent choice for low-temperature and humid environments. It is impact-resistant, making it ideal for transporting delicate or heavy products.

Example Applications:

Fish industry, refrigeration, low-temperature applications.

Operating Conditions:

Acetal (POM) i (POM BIO)

Characteristics:

Acetal is a material with the highest load capacity and low friction coefficient. Its mechanical properties are closest to metal, making it ideal for applications requiring high precision and durability. It is also available in a sustainable version (POM BIO).

Example Applications:

Mechanical industry, automotive industry, heavy industry.

Operating Conditions:

Key Features of Our Products

Compatibility: Thanks to carefully designed parameters, our solution is compatible with the most popular belt types on the market, facilitating integration and replacement.

Easy Replacement: The plug-and-play system ensures that the installation and replacement of MaxbeltModular Easy are exceptionally simple and fast.

Durability: High-quality materials and precise craftsmanship guarantee long-lasting and reliable product performance.

Advanced Hygiene Technologies

safe

In industries where hygiene standards are crucial, such as the food, pharmaceutical, and personal care product industries, ensuring the highest level of cleanliness and safety is an absolute priority. **Safe** modular belts offer solutions that meet these rigorous requirements through the use of advanced technologies and specialized **additives for plastics**.

MaxbeltModular Safe is a family of belts that utilize innovative materials enhanced with contamination prevention technologies.

Safe	Feature	Colour	Application
<p>AM Silver</p> 	<p>ANTIBACTERIAL</p> <ul style="list-style-type: none"> • The belt material contains silver ions • Eliminates bacteria and microorganisms • Acts as a long-lasting antibacterial agent • Prevents pathogen growth • Highly resistant to chemicals 		<p>Food industry, meat processing, pharmaceuticals, personal hygiene product manufacturing</p>
<p>AM Gold</p> 	<p>BACTERIOSTATIC</p> <ul style="list-style-type: none"> • Free from metallic additives • Reduces bacterial growth by up to 99% • Prevents biofilm formation • Enhances hygiene safety • Reduces the need for frequent use of strong chemicals • Highly resistant to chemicals 		
<p>Detect</p> 	<p>DESIGNED FOR METAL DETECTORS</p> <ul style="list-style-type: none"> • Material detectable by metal detectors and other detection devices • Increases safety in food production and other sensitive manufacturing processes • Enables identification of small particles, even as small as 3 mm 		

hi-temp

Hi-temp is a line of modular belts designed for conveyors used in industries operating at extremely high temperatures. Utilizing advanced plastics, our belts are adapted to work in the most demanding conditions, such as pasteurizers, ovens, baking systems, and frying applications.

HeatGuard / Thermal resistance up to 120°C

A specially designed material that performs excellently in applications where the operating temperature does not exceed 120°C. Ideal for less extreme thermal processes such as preheating, cooling after thermal processes, or pasteurization.

ThermoPro / Thermal resistance up to 180°C

Provides increased thermal resistance up to 180°C, making it suitable for applications behind bread ovens, where exposure to high temperatures is crucial for maintaining process efficiency. ThermoPro also features excellent wear resistance and durability but is not suitable for operation in humid environments.

Duramid / Thermal resistance up to 220-260°C

A top-tier material capable of withstanding extremely high temperatures up to 260°C. Duramid is the ideal choice for advanced thermal processes and frying systems, where reliability and dimensional stability are key to maintaining continuous production. It performs exceptionally well in contact with water, oils, and fats and offers a wide range of chemical resistance.

strong

Strong is a line of modular conveyor belts distinguished by exceptional durability and resistance, offering reliable solutions for the most demanding applications. Using specialized plastics, our belts are the perfect choice for industries where extreme working conditions impose the highest requirements for longevity and resistance.

Durability and abrasion resistance:

Strong is made from a material with exceptional resistance to impact and mechanical damage. These belts are considered nearly indestructible, ensuring outstanding durability even in harsh working conditions. They are also highly resistant to abrasion, making them ideal for high-wear applications, such as the cement industry or corrugated cardboard production.

Chemical resistance:

Strong is resistant to many aggressive chemical substances, making it an excellent choice for industrial environments where contact with chemicals is inevitable, such as industrial washing stations or processing plants.

Strong is a more environmentally friendly material compared to many other plastics, contributing to a reduced negative impact on the environment. By choosing this material, you are investing in a solution that supports sustainable development and minimizes environmental harm, as its longer lifespan results in less waste.

Strong is a safe material with excellent properties and significant competitiveness. It is made with substances which are considered non-toxic and characterized by exceptional chemical resistance, impact resistance, and abrasion resistance.

Extremely abrasion resistance

Exceptional impact resistance

High chemical resistance

Data Sheets

Proper maintenance, correct usage, and environmental control are key elements that extend the lifespan of conveyor belts. MaxbeltModular has been providing solutions that enhance the efficiency of conveyor systems, which is why we share 5 proven ways to extend the lifespan of belts:

1. Choosing the right material

Each operation has different requirements. It is important that the belt is tailored to the specific conditions – from the type of cargo being transported to the work environment. MaxbeltModular offers a wide range of modular belts suited to various industries.

2. Proper installation and team training

Installation errors, such as improper alignment or tension, can lead to premature wear. Additionally, training personnel on proper system operation significantly reduces the risk of damage.

3. Regular inspection and maintenance

Establish a schedule for inspections and maintenance that includes cleaning, lubrication, and adjustments to tension and alignment. A proactive approach prevents more serious malfunctions and maintains maximum equipment efficiency.

4. Load distribution systems

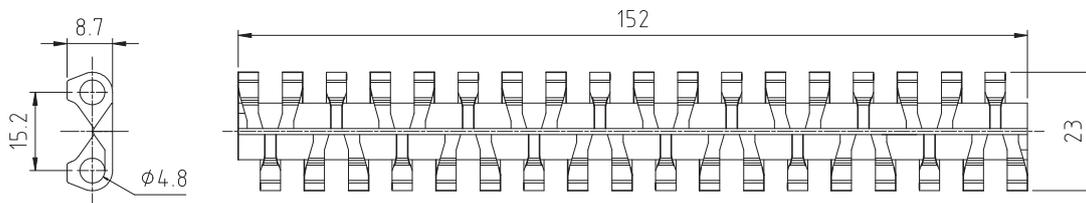

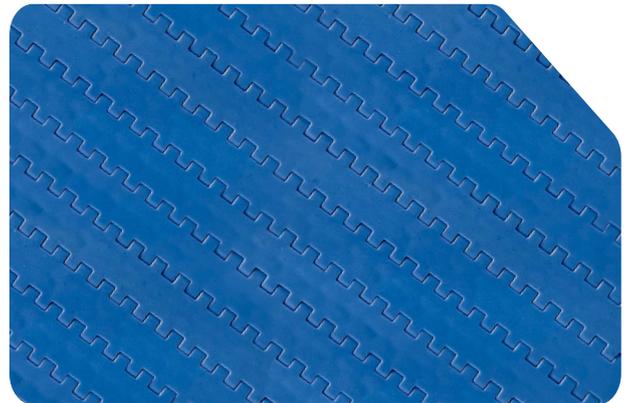

Uneven distribution of materials leads to increased wear on the belt. Implementing systems that evenly distribute the load greatly extends its lifespan.

5. Monitoring environmental conditions

Extreme temperatures, humidity, chemicals, or UV radiation have a destructive effect on materials. Controlling the work environment of the conveyor belt or selecting resistant materials protects the belt from rapid degradation.

Flights and side guards

Base	Type	Height	Width	Margin
C2500/1100-FG36-2.2	Straight flights	50 mm	133 mm	-
			165 mm	2x20 mm
	Side guard	60 mm		

What to look for?

- The minimum inside turning radius is 2.2 times the belt width. This applies to all manufactured widths. The recommended turning radius that maintains optimal belt geometry is 2.5 times the belt width
- The minimum length of the straight section near the drive and return shaft of a radius belt must be twice the width of the belt.
- The minimum straight run section between two turns in opposite directions must be 2 times the width of the belt.

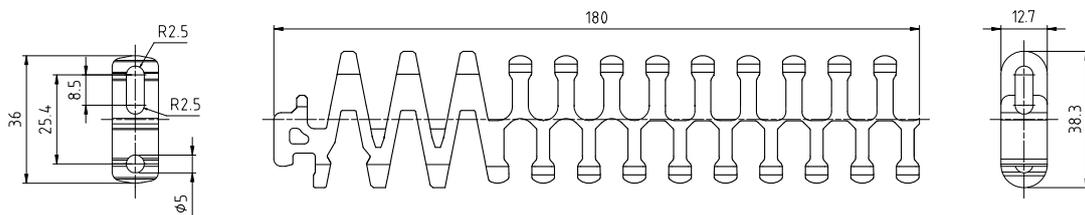

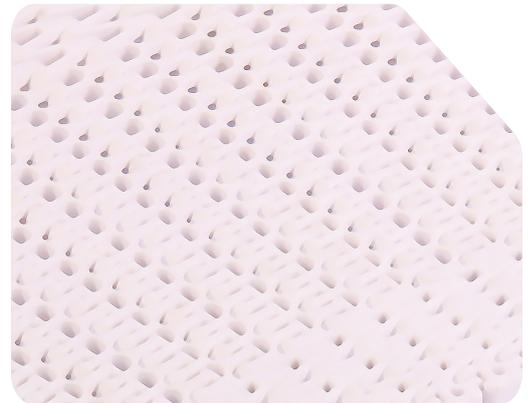

Guide rail and wear strips

- We have different kinds of guide rail and wear strips for your choice. For more information, please consult our sales team.

20-2R	162.37	38.1/40	25.4/38.1	25	6.35X3.17	

What to look for?

- The minimum turning radius (inside) is 1.7 times of belt width under all feasible belt width, 2.0 times of belt width is the most optimal.
- The minimum straight run section near driving shaft and idling shaft of radius belt must be 2 times of the belt width in length.
- The minimum straight run section between two turns of opposing direction must be 2 times of the belt width in length.
- When using a belt width bigger than 453 mm in spiral and flat turning applications, please contact our sales team.

Guide rail and wear strips

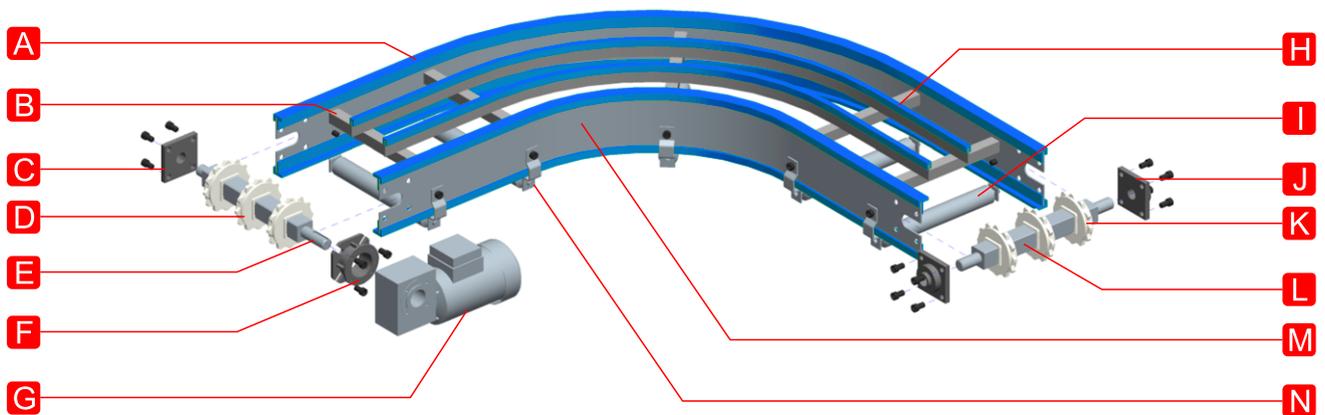

- We have different kinds of guide rail and wear strips for your choice. For more information, please consult our sales team.

Radius conveyor operating speed

In the case when the radius belt rests on the side slides and the speed is above 30 m/min, the belt is exposed to falling on the return. This is due to the fact that the belt tension during operation on the curve cannot be too high.

In such a situation, additional rollers with bearings should be used on the return. To reduce friction between the slides and the belt, support should be provided with slides made of materials with a low coefficient of friction (ACETAL).

Chemical resistance chart

Determining whether contact with the materials listed in the table is harmful to the human body is beyond the manufacturer's duty and responsibility (additional technical data sheets will not be issued). If the chemical conditions specified in the chart change, the chemical resistance of the belt modules must also be reconsidered. It is recommended to observe or conduct tests on actual modules (test samples available upon customer request) to assess the impact of different environments and conditions on the belt modules.

Material	Symbol	Certification*	Density g/cm ³	Temp. Min.	Temp. Max.	Colour**
Polypropylene	PP	The thermoplastic texture features excellent resistance to acids and bases. Strong concentrations and applications below 10°C should be avoided.				
		EU FDA	0,9	+1°C	+100°	white grey blue
Polyethylene	PE	The thermoplastic material is suitable for use in low-temperature environments or applications where the transported item falls onto the belt. It offers excellent resistance to acids and bases but is not suitable for high-friction applications. It should not be exposed to prolonged contact with high-concentration acids and chlorine. Below -40°C, the sprocket may not engage properly with the belt due to material shrinkage.				
		EU FDA	0,94	-60°C	+60°C	natural black brown red, blue
Polioksymetylen (Acetal)	POM (AC)	The thermoplastic material features high mechanical strength, a low friction coefficient, considerable impact resistance, and resistance to cutting, along with excellent resistance to acids and bases. It is suitable for transporting heavy objects in low temperatures but is not suitable for prolonged exposure to high-concentration acids and chlorine.				
		EU FDA	1,42	-40°C	+80°C	blue white, dark grey
Poliamid	PA	The thermoplastic material has high mechanical strength and hardness, making it suitable for transporting heavy loads in dry environments and at high temperatures. After material modification, it can maintain stability in dry and warm conditions. Flammability: UL94 V2 Above +40°C, the material becomes very hard.				
		EU FDA	1,14	+1°	+180°C	natural beige
Strong HK	HK	The module is made of a material with exceptional impact and mechanical damage resistance, ensuring outstanding durability in demanding working conditions. It is resistant to many aggressive chemicals and is more environmentally friendly compared to many other plastics.				
		EU FDA	1,24	-40°C	+80°C	natural white blue yellow

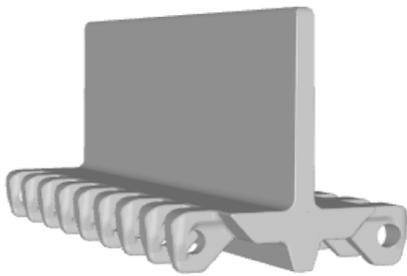

*Optional: Specify at the inquiry stage if certification (e.g., EU food contact, FDA, or other) is required.

**Other colours available on request.

ACCESSORIES

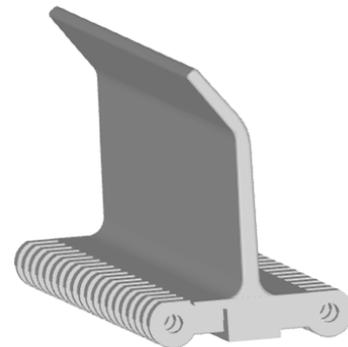

Straight flights

Modular belts can be equipped with flights, allowing for inclined transport. The height range of the flights varies depending on the belt series.

Bended flights

Bended flights feature a special bend that supports the product during upward transport.

„Pop-up” flights

„Pop-up” flights - A true innovation in the food industry. These extend during belt ascent to support the transported product and retract after successful discharge. This is particularly useful for sticky or adhesive food products.

„Scoop” flights

„Scoop” flights - To prevent products from falling during steep incline transport, we offer scoop flights. Depending on the series, they are available in 75, 100, and 150 mm heights. The standard bend angle is 90 degrees, enabling vertical product transport.

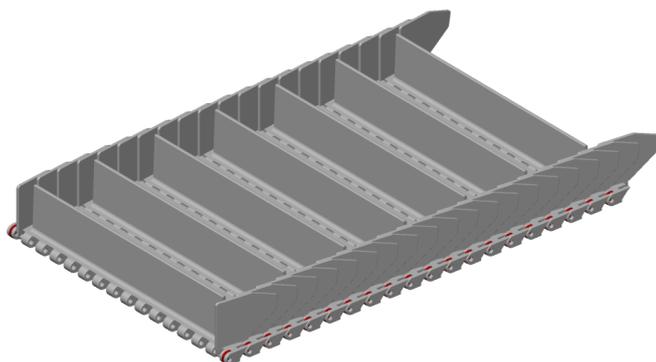

Available flights
