

Who we are

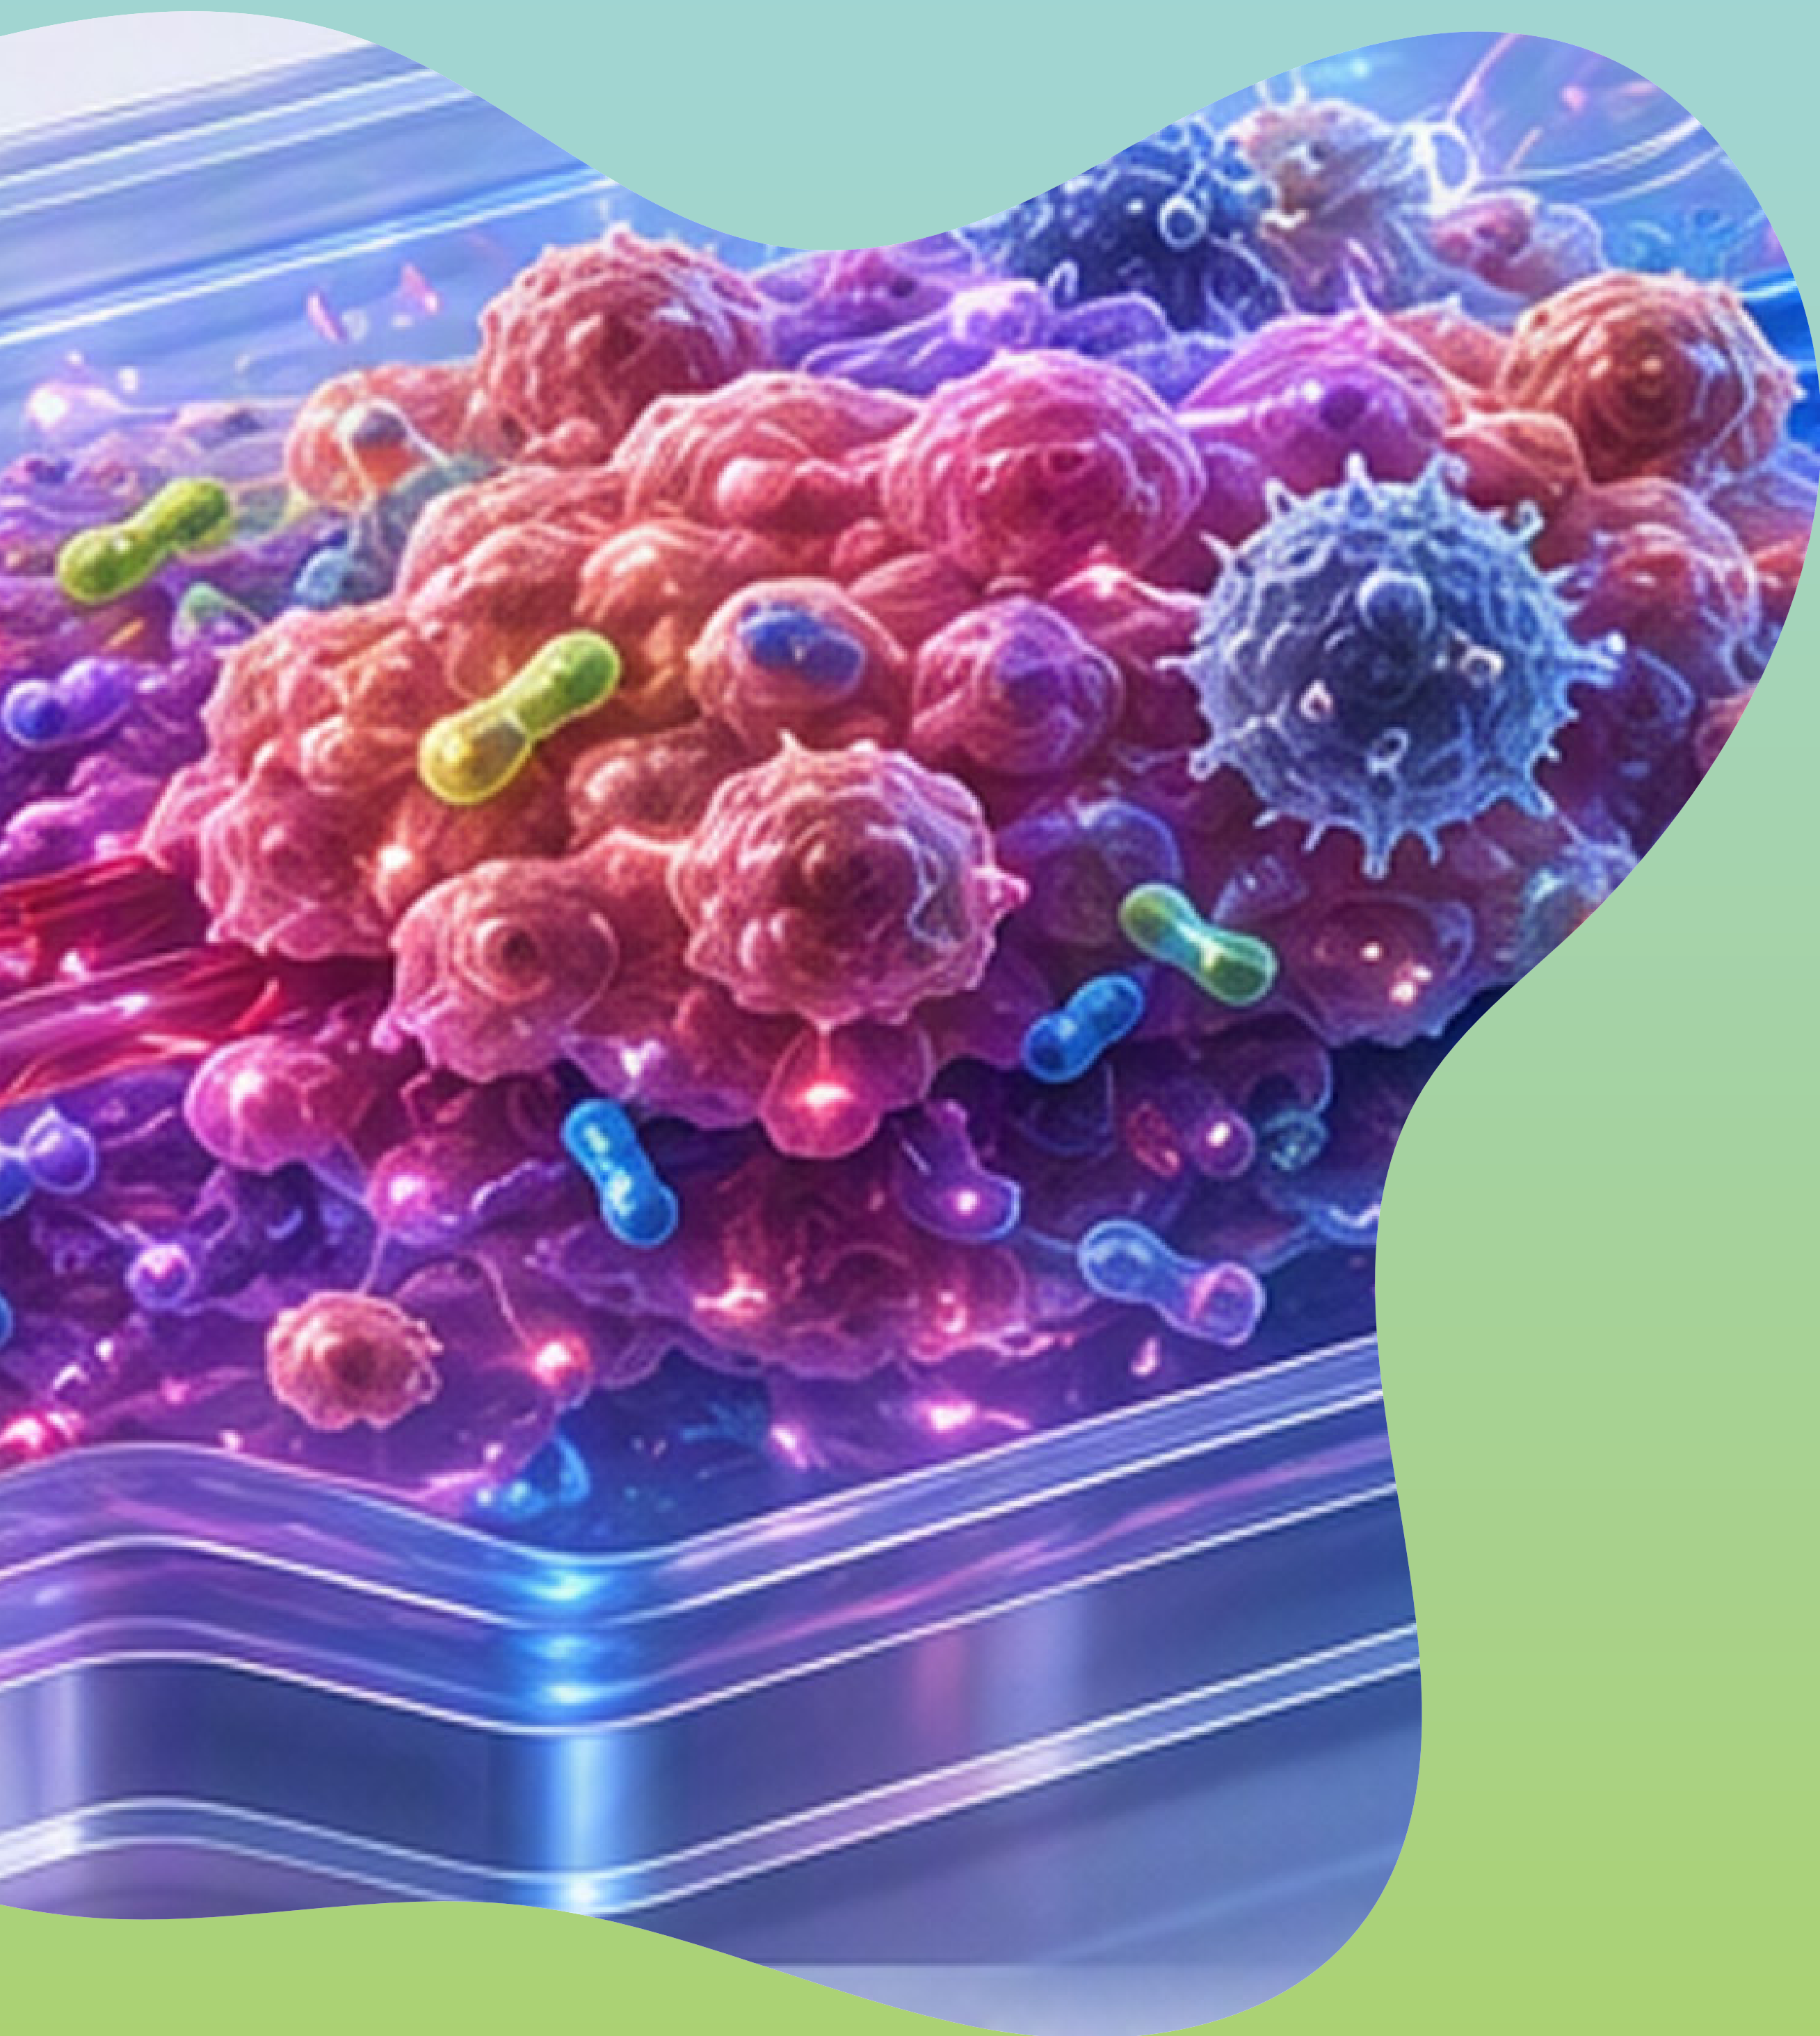

ARTURO is a 6-partner Horizon Europe project combining multidisciplinary expertise to understand tumour-host interactions and develop patient-centred cancer innovations.

What we are working on

We study how intratumoral bacteria affect treatment response using patient-derived tumour-on-chip models, multi-omics, AI, co-design, implementation science, and 'ethics by design' to support personalized cancer care.

What's the one thing we need next

We need to quickly advance new predictive diagnostic biomarkers for therapy responses, based on intra-tumoral bacterial strains, accelerating innovations toward clinical practice and policies, fostering ARTURO's science to societal and real-world value.

**5 years Mission Cancer:
Stronger Through Connection**
