Endpoint Management

Centralized Administration of Users and Servers

Benefits:

- ✔ Real-time system performance monitoring
- ✔ Software and hardware asset inventory management
- ✔ Threshold-based alerts for critical conditions
- ✔ Cross-platform (all OS) compatibility

Network Management

Secure Network Administration

Benefits:

- ✔ Location-agnostic tracking of network devices
- ✔ Unified network management from a single console
- ✔ End-to-end network performance monitoring and measurement
- ✔ Network observability with graphs and topology maps

Privileged Access Management (PAM)

Centralized Governance and Monitoring for Privileged Access

Benefits:

- ✔ Mitigation of insider threats
- ✔ High-speed, privileged session connectivity
- ✔ Command filtering and blocking
- ✔ Centralized audit and compliance management

Patch Management

Automated OS and Third-Party Software Updates

Benefits:

- ✔ Scheduled, policy-driven updates
- ✔ Pre-deployment testing capability
- ✔ Update reporting and compliance tracking
- ✔ Automated update distribution

Mobile Device Management (MDM)

Secure Management for Mobile Devices

Benefits:

- ✔ Centralized app deployment and removal
- ✔ Real-time device visibility with location tracking
- ✔ Centralized configuration and control of mobile endpoints
- ✔ Centralized administration of access permissions

IT Service Management (ITSM)

Service Management, Event & Assets, SLAs

Benefits:

- ✔ Centralized request management
- ✔ Comprehensive incident and asset management
- ✔ SLA-aligned service tracking
- ✔ Automated workflows

Data Center & Virtualization Management

Resource, Service, and Cost Optimization

Benefits:

- ✔ Automated service lifecycle management
- ✔ Advanced reporting and strategic planning
- ✔ Resource and service tracking
- ✔ Cost optimization

System Operations Center (SOC)

Centralized, Operations-Focused Monitoring

Benefits:

- ✔ Comprehensive, customizable deep monitoring
- ✔ Status and alert tracking on geospatial maps

Report Management

Real-Time, Detailed Reporting, Customizable Report Generation

Benefits:

- ✔ Export to multiple file formats
- ✔ Scheduled performance monitoring and reporting

Network Video Recorder Management (NVR)

Map-Based Operations for NVRs and IP Cameras

Benefits:

- ✔ Real-time, map-based monitoring
- ✔ Configurable monitoring parameters
- ✔ Disk and hardware health monitoring
- ✔ Advanced alerting and historical analytics

Digital Video Recorder Management (DVR)

In-Vehicle DVR and GPS Tracking

Benefits:

- ✔ GPS-based vehicle tracking
- ✔ Storage health monitoring
- ✔ Real-time status and fault alerts
- ✔ Secure, encrypted communication

Urban Surveillance Cameras

Unified Field-to-Core Monitoring

Benefits:

- ✔ Real-time network map
- ✔ Pole-level dashboards
- ✔ PoE power and energy monitoring
- ✔ Event and syslog management

Agera ATM Management

ATM RMMS solutions

Benefits:

**Spin-off*

- ✔ Continuous Operations & Proactive Monitoring
- ✔ Centralized Task & Configuration Management
- ✔ Multi-Bank & Supplier Compatibility
- ✔ Advanced Security Layers

Unified IT Management.
Real-Time Security.
Scalable Control.

Gardiyan consolidates endpoint, network, and security operations into a single console. Designed for enterprises and critical infrastructure, the platform boosts operational efficiency with real-time monitoring and sustainability features, delivering a seamless digital experience.

1,500,000+
