

The Bio-based Industries Consortium and the CBE JU call for proposal 2026

Samuele Ambrosetti

Programme and Innovation Manager
Bio-based Industries Consortium

Who we are

Leading Europe's sustainable, circular, bio-based transition

The Bio-based Industries Consortium (BIC) is a non-profit organisation connecting industry, academia, regions and citizens to transform bio-based feedstocks into novel sustainable products and applications, and create circular bioeconomy ecosystems through investments, innovation and know-how.

biconsortium.eu

 **Bio-based Industries Consortium**

Our mission

Supporting bio-based industries going from “lab” to “fab”

Our actions

The “sweet spot”

At the intersection between access to finance, innovation and scale-up and policy support...

**Circular
Bio-based
Europe**

Joint Undertaking

is where **EU policy** provides **financial support** for **innovation and scale-up** in bio-based industries

biconsortium.eu

What's the CBE JU

- Institutionalised PPP under Horizon Europe
- Private partner: BIC
- Funding R&I projects up to TRL 8
- 6 annual calls for proposals, 2022-2027
- Budget: **€ 1 billion** of public funding + **€ 1 billion** industry co-investment
- Grant size:
 - € 3-5 million for projects @TRL 4-5
 - € 6-8 million for projects @TRL 6-7
 - € 15-20 million for projects @TRL 8
- Collaborative projects
- Competitive calls for proposals

CBE JU: the successor of BBI

From BBI JU (2014-2020)...

142 projects

€ 1 billion public funding +
€ 2.7 billion investments from industry

1055 beneficiaries

39 countries

... to CBE JU (2021-2027)*

6 annual calls for proposals, from 2022 to 2027

€ 1 billion of public funding + at least € 1 billion from industry

~150 projects expected

biconsortium.eu

*the last call for proposals is in 2027. Projects are expected to run until 2031-32

Data: CORDA, June 2021

CBE JU – Type of actions

BBI+CBE Flagship and Demo plants

On the map

CBE JU is funding first-of-their-kind biorefineries and demonstration plants to help expand the European circular bio-based economy.

Select what you want to see:

Demonstration plant

Flagship biorefinery

Deadline: 22 September

CBE JU 2026 call topics

Topic	N	Total M€
IAFlag-01: Boosting biorefinery competitiveness through biotech	1	20
IAFlag-02: SSbD bio-based alternatives for fertilising and/or crop protection products	1	20
IAFlag-03: SSbD bio-based solutions for home and/or personal care	1	20
IAFlag-04: Diversification of nutritional food ingredient sources for increased EU resilience and strategic autonomy	1	20
IA-01: Biotech routes for valorisation of residual biomass	2	14
IA-02: Bio-based additives as alternatives to unlock and increase recyclability	2	14
IA-03: Bio-based chemicals and/or materials from woody residues	2	14
IA-04 High-performance, circular-by-design, bio-based thermosets	2	14
IA-05: Films and coatings for circular packaging	2	14
RIA-01: Addressing separation and purification challenges in biorefineries	2	6.5
RIA-02- SSbD bio-based polymers from alternative sources	2	6.5
RIA-03-Develop breakthrough and sustainable bio-based textile fibres	2	6.5
CSA-01: Supporting industry in the switch to sustainable and circular bio-based products and processes	1	1.2

CBE JU 2026 call topics: Flagships

Topic	N	Total M€
IAFlag-01: Boosting biorefinery competitiveness through biotech	1	20
IAFlag-02: SSbD bio-based alternatives for fertilising and/or crop protection products	1	20
IAFlag-03: SSbD bio-based solutions for home and/or personal care	1	20
IAFlag-04: Diversification of nutritional food ingredient sources for increased EU resilience and strategic autonomy	1	20

- Funding: **20 M€ for 1 project**. Funding rate: **60%** for companies, **100%** for non-profit entities
- **IKOP threshold: at least 20%** of eligible costs of the project as a whole
 - With a funding rate of 60%, this means that at least 50% of the eligible costs must be allocated to companies that are (or become via “project membership”) BIC members
- End **TRL 8** for the main activities. Activities at lower TRL are allowed to e.g. pave the way to next gen
- **Quantified business case and business plan** including replication potential (Annex)
- **Multi-actor approach**: see topic for specific actors to be involved
- **Links and complementarities** to previous / ongoing projects: see topic for specific projects
- **Contribution to CBE specific requirements**: see topic for specific details
- **Environmental impact and SSbD assessment**

HORIZON-JU-CBE-2026-IAFlag-01: Boosting biorefinery competitiveness through biotech

<i>Funding</i>	20 M€ for 1 project selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	8
<i>Expected outcomes</i>	Full industrial scale biorefinery and related value chain(s) for the sustainable production ... using biotech as a key enabling technology . • Availability of bio-based products meeting market and technical performance requirements.... • Improvement of sustainability, circularity and resource efficiency ... • Contribution to increasing the EU's strategic autonomy, resilience and competitiveness .
<i>Scope (overview)</i>	• Demonstrate (at TRL 8) a sustainable and robust biomanufacturing route to obtain biobased product(s). Focus on processes in which biotechnology is the key enabling technology; the integration of (upstream and/or downstream) supporting unit operations based on technologies other than biotechnology. Products in scope include chemicals, intermediates, polymers, ingredients and enzymes. Food and feed ingredients as main application are out of scope. ... • Demonstrate (at TRL 8) the further conversion or use of the obtained biorefinery product(s) into at least one end-product driving the business case; ...

HORIZON-JU-CBE-2026-IAFlag-02: SSbD bio-based alternatives for fertilising and/or crop protection products

<i>Funding</i>	20 M€ for 1 project selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	8
<i>Expected outcomes</i>	Full industrial scale biorefinery and related value chain(s) for the sustainable production of bio-based fertilisers and/or crop protection solutions . • Increased availability of cost-competitive and SSbD bio-based alternatives for fertilising and/or crop protection products with suitable agronomic efficacy. • Reduced reliance on synthetic/mineral agricultural chemical products . • Increased EU strategic autonomy, resilience and competitiveness
<i>Scope (overview)</i>	• Demonstrate (at TRL 8) the efficient industrial production of SSbD bio-based solutions as alternatives to current fertilising and/or crop protection products. <u>Bioactive molecules and/or biotechnology solutions for bio-fertilisers, bio-stimulants and/or pest/disease control (e.g., bioherbicides, biopesticides, bioinsecticides), or a combination thereof, are in scope.</u> Products in scope can be applicable at any crop(s) cycle stage. • Validate (at TRL 6 and above) ... into the <u>formulation of end-product(s) and test their agronomic efficiency, safety and sustainability</u> to prove the achievement of similar or improved properties compared to defined benchmarks available • <u>Test the developed product(s) with primary producers on the field (demo farms)</u> for selected crops and monitor their effects on soil health and quality, as well as on water.

HORIZON-JU-CBE-2026-IAFlag-03: SSbD bio-based solutions for home and/or personal care

<i>Funding</i>	20 M€ for 1 project selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	8
<i>Expected outcomes</i>	 SSbD bio-based solutions for home and/or personal care sector with significantly improved sustainability. • Wider availability of bio-based products in home and/or personal care sector meeting both regulatory standards and technical performance requirements. • Increased consumer/end user acceptance of bio-based solutions, • Contribution to the EU strategic autonomy, resilience and competitiveness ,..
<i>Scope (overview)</i>	• Demonstrate (at TRL 8) the production of SSbD bio-based solution(s) as an alternative to conventional chemicals, ingredients and combinations thereof, that are currently used in the formulation of home and/or personal care products (including cosmetics). <u>SSbd biobased chemicals/ingredients and biotechnology solutions are both in scope</u>. Materials entering the end product formulation (e.g., granulates, powders, microbeads, micro/nano cellulose) are also in scope, while other materials related to home and personal care applications (e.g., nonwovens, other wipes, packaging) are out of scope. • Demonstrate (at TRL 7 and above) the application of the bio-based solution(s) into the <u>formulation of market relevant end-product(s)</u>. Assess <u>technical performances of endproduct(s)</u>, ensuring that their final properties meet market application requirements. • <u>Test that the release and accumulation of pollutants and harmful substances in the water is being avoided, including microplastics</u>. When biodegradable solutions are targeted, validate biodegradability

HORIZON-JU-CBE-2026-IAFlag-04: Diversification of nutritional food ingredient sources for increased EU resilience and strategic autonomy

<i>Funding</i>	20 M€ for 1 project selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	8
<i>Expected outcomes</i>	Full industrial scale biorefinery and related value chain(s) for the production of nutritional food ingredients. • Resilience and strategic autonomy of EU food• Increased environmental sustainability of food sectors• Improved consumers awareness and acceptance of nutritional food ingredients from alternative sources, contributing to sustainable healthy diets
<i>Scope (overview)</i>	- Demonstrate (at TRL 8) the efficient production of nutritional ingredients for food applications. Proteins, lipids, specialty carbohydrates, and fibres are in scope. Target at least one of these as the main product driving the business case. <u>All sources of bio-based feedstock are in scope</u>. Direct production of food from food crops, livestock, fisheries and aquaculture is not in scope. The use of industrial grade feedstock from agricultural crops is in scope for conversion into food grade ingredients. - Validate (at TRL 6 and above) the use of the obtained nutritional food ingredient(s) into the <u>formulation of at least 1 food product</u> proving quality, stability, nutritional and sensorial properties. - Address resource efficiency and circularity aspects to increase economic and socioenvironmental added value. When pursuing circular models, ensure that neither pathogens nor contaminants are injected back in the loop to avoid negative toxicological effects

CBE JU 2026 call topics – Innovation Actions

Topic	N	Total M€
IA-01: Biotech routes for valorisation of residual biomass	2	14
IA-02: Bio-based additives as alternatives to unlock and increase recyclability	2	14
IA-03: Bio-based chemicals and/or materials from woody residues	2	14
IA-04 High-performance, circular-by-design, bio-based thermosets	2	14
IA-05: Films and coatings for circular packaging	2	14

- Funding: **14 M€ for 2 projects**. Funding rate: **60%** for companies, **100%** for non-profit entities
- **IKOP threshold: at least 15%** of eligible costs of the project as a whole
 - With a funding rate of 60%, this means that at least 37,5% of the eligible costs must be allocated to companies that are (or become via “project membership”) BIC members
- End **TRL 6-7** for the main activities. Activities at lower TRL are allowed to e.g. pave the way to next gen
- **Multi-actor approach**: see topic for specific actors to be involves
- **Links and complementarities** to previous / ongoing projects: see topic for specific projects
- **Contribution to CBE specific requirements**: see topic for specific details
- **Quantified business model and business case**, including potential for upscaling
- **Environmental impact and SSbD assessment**

HORIZON-JU-CBE-2026-IA-01: Biotech routes for valorisation of residual biomass

<i>Funding</i>	14 M€ for 2 projects selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	6-7
<i>Expected outcomes</i>	Increased added value of residual biomass for biorefinery applications. • Availability of a wider portfolio of sustainable bio-based products via industrial biotech. • Robust, scalable and efficient biotech process(es) applicable to residual biomass
<i>Scope overview</i>	• Demonstrate (at least TRL 6) efficient biotechnology-based processes to convert residual biomass streams into bio-based chemicals, intermediates, polymers, materials, ingredients and/or enzymes.The feedstock in scope includes: Forestry and agricultural residues and/or side streams from the processing of forestry and agricultural biomass ...residues from aquatic biomass, ... urban and/or industrial bio-based waste and side-streams, mixed streams Integrate optimised biomass pretreatment/fractionation processes ... The valorisation of by-products and side streams across the value chain via the cascading approach is in scope. • <u>Validate (at TRL 5 and above) conversion (or use) of biorefinery product(s) into endproducts</u> proving to fulfil market requirements for selected applications sectors. • Address resource efficiency and circularity. ...

HORIZON-JU-CBE-2026-IA-02: Bio-based additives as alternatives to unlock and increase recyclability and/or biodegradability

<i>Funding</i>	14 M€ for 2 projects selected
<i>Fund. Rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	6-7
<i>Expected outcomes</i>	Wider availability of bio-based additives targeting high functional properties , stability and compatibility with polymers/matrices. • Contribution to improved circularity of end products in relevant market sectors. • Potential replicability into other industrial sectors...• Reduction or avoidance of environmental impacts related to life cycle of additives....
<i>Scope overview</i>	• Demonstrate (at least at TRL 6) innovative processes for the synthesis of bio-based SSbD additives that: Enable a circular EoL for materials and/or products that are currently not recyclable and/or not biodegradable, <u>or Improve circularity</u> of materials and/or product... (<u>recycling and/or biodegradation</u>). ...addressing existing bottlenecks in the circular EoL • Provide alternative solutions that prevent the release of harmful chemicals during the product life cycle... • Demonstrate (at least at TRL 6) the <u>compatibility and processability</u> of SSbD bio-based additives within the formulation/manufacturing of materials and/or products. ...Target at least two distinct market sectors in cooperation with end-users. • <u>For biodegradability</u> ensure safety in different environments (soil and water) ... • <u>For recyclability</u> any recycling route is in scope

HORIZON-JU-CBE-2026-IA-03: Bio-based chemicals and/or materials from woody residues

<i>Funding</i>	14 M€ for 2 projects selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	6-7
<i>Expected outcomes</i>	Increased availability of bio-based chemicals and/or bio-based materials from woody residues. • Increased sustainability of forest-based value chains in cooperation with local forestry owners/cooperatives. • Improved end-of-life (EoL) of bio-based products from woody residues
<i>Scope overview</i>	• Demonstrate (TRL 6 and above) innovative technologies to obtain bio-based chemicals and/or materials from woody residues. Feedstock in scope includes <u>woody residues generated at forestry and/or at industrial processing sites</u>, • Validate (TRL 5 and above) the <u>obtained chemicals/materials into end products</u>. Assess the products' performance and ensure that they fulfil technical performance requirements according to the end market application(s). • Apply the eco-design principles, in line with the Ecodesign for Sustainable Products Regulation, to the end-product(s) for <u>sustainable EoL and test it at TRL5 and above</u>. Incineration is not in scope.

HORIZON-JU-CBE-2026-IA-04 High-performance, circular-by-design, biobased thermosets

<i>Funding</i>	14 M€ for 2 projects selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	6-7
<i>Expected outcomes</i>	Wider availability of bio-based thermoset materials meeting high technical performance requirements. • Improved circularity of thermosets and downstream application(s) against specified market benchmarks taking into account production, use and EoL.
<i>Scope overview</i>	• Demonstrate (at least at TRL 6) the resource-efficient production of innovative bio-based thermosets, targeting both high performances and circularity. Functionalisation by introducing bio- or non-bio-based additives is also in scope. • Demonstrate (at least at TRL 6) the developed bio-based thermosets <u>conversion into circular end-products</u>, ... • Apply eco-design principles, in line with the Ecodesign for Sustainable Products Regulation, to enable <u>circularity of the thermoset materials</u>,... • <u>Test the selected EoL alternatives (at TRL 5 and above)</u>. Landfilling or incineration are out of scope.

HORIZON-JU-CBE-2026-IA-05: Films and coatings for circular packaging

<i>Funding</i>	14 M€ for 2 projects selected
<i>Fund. rate</i>	60% for companies, 100% for not-for-profit entities
<i>End TRL</i>	6-7
<i>Expected outcomes</i>	Wider availability of bio-based films and coatings for packaging products. • Improved technical performances of packaging products compared to fossil based and/or bio-based benchmarks. • Improved circularity of packaging products against specified market benchmarks...
<i>Scope overview</i>	• Demonstrate (at least TRL 6) innovative technologies for obtaining bio-based films and/or coatings suitable for improving performance of packaging products. <u>Both food and nonfood packaging are in scope</u>. At least <u>one non-food packaging application</u> to be addressed..... • Demonstrate (at least TRL 6) the applicability of the developed solution(s) in the <u>manufacturing of packaging product prototypes</u>, ensuring compatibility with industrial packaging ... • <u>Assess targeted products properties according to the intended application(s)</u> under conditions occurring during the use phases, including transport and storage. ... • Apply the eco-design principles, / Ecodesign for Sustainable Products Regulation, ... • <u>Test the selected EoL alternatives (at TRL 5 and above)</u>. Reuse and remanufacturing are also <u>in scope</u> Landfilling or incineration are <u>out of scope</u>.

CBE JU 2026 call topics - RIA

Topic	N	Total M€
RIA-01: Addressing separation and purification challenges in biorefineries	2	6.5
RIA-02- SSbD bio-based polymers from alternative sources	2	6.5
RIA-03-Develop breakthrough and sustainable bio-based textile fibres	2	6.5

- Funding: **6.5 M€ for 2 projects**. Funding rate: **100%** for companies, **100%** for non-profit entities
- **IKOP threshold: at least 5%** of eligible costs of the project as a whole
 - Since the maximum funding rate is 100% for all entities, IKOP is obtained by voluntary reduction of the funding rate of (a subset of) BIC members in the proposal.
- End **TRL 4-5**
- **Multi-actor approach**: not mandatory unless specified in the topic
- **Links and complementarities** to previous / ongoing projects: see topic for specific projects
- **Contribution to CBE specific requirements**: see topic for specific details
- **Qualitative business case** showing promise when upscaled
- **Environmental impact assessment** (based on preliminary data)
- **SSbD assessment** only when specified

HORIZON-JU-CBE-2026-RIA-01: Addressing separation and purification challenges in biorefineries

<i>Funding</i>	6.5 M€ for 2 projects selected
<i>Fund. rate</i>	100% for companies, 100% for not-for-profit entities
<i>End TRL</i>	5
<i>Expected outcomes</i>	...competitiveness, efficiency, sustainability, circularity and safety of industrial biorefineries. • Efficient, selective and scalable separation and purification technology platform(s)to be integrated within existing and/or new biorefineries. • Purity and stability of targeted intermediates/product(s) compatible with further conversion requirements
<i>Scope overview</i>	• Develop scalable separation and purification technologies and test the developed innovative solutions on <u>at least 3 use cases</u> from biorefinery processes at industrial or demo scale. <u>Address at least two</u>: (1) increase efficiency when using available green solvents (including water), or develop novel ones and in both cases minimise the use of harsh solvents; (2) applying process intensification ... through reduction of process steps; (3) reducing thermal and/or electric energy and water consumption. • Address compatibility of the innovative separation and purification solutions with existing upstream technologies <u>or</u> develop solutions (upstream and downstream challenges). • <u>Test and validate</u> the performance of targeted technologies and their effect on selected bio-based product(s). Both novel (not yet available on the market) and well-established bio-based products are in scope.

HORIZON-JU-CBE-2026-RIA-02- SSbD bio-based polymers from alternative sources

<i>Funding</i>	6.5 M€ for 2 projects selected
<i>Fund. Rate</i>	100% for companies, 100% for not-for-profit entities
<i>End TRL</i>	5
<i>Expected outcomes</i>	Sustainable feedstock diversification for the production of bio-based polymers. • Scalable process(es) for obtaining SSbD bio-based polymers from bio-based feedstock alternative to primary biomass . • Enlarge the portfolio of performant bio-based polymers ...
<i>Scope overview</i>	• Develop (at TRL 5) efficient processes for synthesis and/or extraction of bio-based polymer(s) from the alternative sources in scope, targeting high yield and selectivity. <u>Primary biomass from agriculture and forestry is out of scope</u>; ... Both new bio-based polymers and already established ones are in scope. • Integrate further <u>isolation and purification (when relevant)</u> of obtained bio-based polymer(s) according to specific application requirements. Functionalisation of purified bio-based polymers to achieve targeted properties is also in scope. • <u>Test (at least at TRL 4) the suitability of obtained bio-based polymers in circular-by-design final applications targeting at least two market sectors</u>. ... • <u>Test (at least at TRL 4) for suitable, safe and sustainable EoL options</u> Biodegradability...

HORIZON-JU-CBE-2026-RIA-03-Develop breakthrough and sustainable bio-based textile fibres

<i>Funding</i>	6.5 M€ for 2 projects selected
<i>Fund. rate</i>	100% for companies, 100% for not-for-profit entities
<i>End TRL</i>	5
<i>Expected outcomes</i>	Wider availability of natural and/or man-made bio-based fibres meeting market requirements. • Scalable production processes for novel man-made and/or modified natural fibres. • Enhanced circularity and prevent microplastics release compared to benchmarks
<i>Scope overview</i>	- Develop breakthrough processes to yield bio-based textile fibres from sustainably sourced biomass feedstock. Bio-based textile waste is eligible as feedstock. <u>Bio-based man-made (synthetic and semi-synthetic) fibres and/or the extraction, refinement and functionalisation of natural fibres are in scope</u>. - Ensure <u>compatibility</u> with existing textile manufacturing processes and equipment to facilitate market penetration. - Design the bio-based fibre(s) to improve specific technical requirements against state-of-the-art benchmarks, - Design the bio-based textile fibres for sustainable end of life. Assess the actual feasibility of the targeted end of life option(s) . Prevent release of microplastics and other harmful substances along the whole product life cycle.

CBE JU 2026 call topics - CSA

Topic	N	Total M€
CSA-01: Supporting industry in the switch to sustainable and circular bio-based products and processes	1	1.2

- Funding: **1.2 M€ for 1 project**. Funding rate: **100%** for all participants
- Not related to TRL
- **Multi-actor approach**: not mandatory unless specified in the topic
- **Links and complementarities** to previous / ongoing projects: see topic for specific projects
- **Contribution to CBE specific requirements**: see topic for specific details

HORIZON-JU-CBE-2020-CSA-01: Supporting industry in the switch to sustainable and circular bio-based products and processes

<i>Funding</i>	1.2 M€ for 1 project selected
<i>Fund. rate</i>	100% for companies, 100% for not-for-profit entities
<i>End TRL</i>	N/A
<i>Expected outcomes</i>	Identification of technical, market and regulatory barriers and possible solutions for industry to 'switch to bio-based'. • Contribution to filling the gap between bio-based sectors and the broader industrial landscape
<i>Scope overview</i>	• Perform a consultation among non-bio-based and partially bio-based industries to identify barriers preventing them to adopt/diversify bio-based feedstock and processes in their operations. <u>Include at least 3 industrial sectors</u> that are critical for the green transition. • Analyse the outcomes from the consultation <u>to identify barriers to bio-based transition and propose possible solutions</u>. Validate the results with end users/consumers.... • Identify <u>case studies and success stories</u> showcasing best practice... • <u>Create a forum</u> bringing together bio-based industries, feedstock providers, non-bio-based and partially bio-based industries, investors, policymakers, demand-side actors ...to facilitate the dialogue among the stakeholders ... • Develop and publish <u>sectoral and cross-sectoral roadmaps</u>
