

# Electronic Signature & Digital Services Platform

Transform how your organization signs and delivers digital services.

Powered by three complementary solutions designed for simple, no-code use, covering every signing scenario and making digital service delivery easy for your organization and its clients.

## Qualified Electronic Signature

Sign documents securely and legally from anywhere, at any time. Fully compliant with the eIDAS regulation and recognized across the European Union.

## Biometric Signature on a Tablet

Signing on a tablet with a digital pen captures unique handwriting data, resulting in a legally binding signature. Built-in templates, assistance mode, and a virtual printer feature make the document completion process clear and user-friendly.

## Digital Service Builder

Create digital services without any coding. Easily design forms, workflows, and processes within a single platform. The system ensures services are presented in a clear and intuitive way, enabling customers to quickly find and order what they need.

Elpako is developed by NEVDA (est. 1993), a long-term provider of large-scale government and enterprise digitalization solutions.

## Guaranteed security.

-  Legally equivalent to a handwritten signature.
-  Encrypted and protected with qualified time stamps.
-  Forensic graphometric data available in case of disputes.
-  Certified under eIDAS and ISO/IEC 27001.
-  Backed by third-party and professional liability insurance.

eIDAS  
Qualified  
Provider
