Environmental Social Governance (ESG) @ GEDORI

What does Sustainability mean for us?

GEDORE has stood for tradition and sustainability for over 100 years. As a family business in its 4th generation, we attach great importance to sustainable corporate management.

For us, sustainability means not only ecological action, but also economic strength. We manage our company with a view to future generations by making environmentally conscious decisions and utilizing resources efficiently. This enables us to be successful in the long term and at the same time make a positive contribution to the environment. Our products are of high quality and repairable and can therefore be used over a long period of time. We consciously use sustainable materials and production processes to conserve resources and ensure the longevity of our products. This is the only way we can offer our customers sustainable solutions. For us, sustainability also means sustainable management. We can only afford to be a pioneer in environmental protection and implement sustainability projects based on our economic strength.

We are also committed to the region and work together with companies in our region, the *Bergische Städtedreieck*. As a member of the *Zukunftskreis Nachhaltigkeit HOCH3*, a sustainability network of companies, we are actively committed to sustainable development in our region. We are also cooperating with *Neue Effizienz* to take the first steps towards a circular economy. Our commitment to sustainability has also been recognized by the ÖKOPROFIT certification. This award confirms our endeavors to continuously improve our processes and make them more environmentally friendly.

We are proud of what we have achieved, but we are not resting on our laurels. We want to continue working on sustainability issues and constantly improve. This is the only way we can fulfil our responsibility towards the environment and future generations.

 Dr. Christian Dowidat
 Managing Partner

SUSTAINABLE DEVELOPMENT GOALS

We have been taking responsibility for over 100 years and are making an active contribution to achieving the 17 Sustainable Development Goals of the United Nations.
