

Grants8 for Innovation Leaders

Core Value Statement (What We Do)

Grants8 enables ambitious organizations to consistently secure grant funding by transforming the slow, complex, and high-risk process of grant discovery and application into a streamlined, low-cost, and predictable funding channel, effectively acting as a virtual “Grants Office” that runs 24/7.

The Problem: Securing Public Funding Is Fundamentally Broken

- **Fragmented, bureaucratic, and opaque:** Instead of focusing on innovation and mission-critical work, organizations are forced to navigate a maze of complex procedures, portals, and documentation, creating frustration and uncertainty.
- **Wrong people paying the price:** Innovation leaders, R&D managers, and research teams have the vision and technology but often lack the time and legal-formal bandwidth to effectively compete for global, EU and national funds.

Pain Points Solved (The “Before” State)

- **Discovery - Fragmented, time-consuming, “closed”**
You waste 80-200 hours a year manually browsing multiple portals, filtering irrelevant newsletters, and trying not to miss a critical opportunity.
- **Application - Complex and high-risk**
Each grant is described differently across platforms. Documentation runs to tens of pages, increasing the risk of disqualification due to formal mistakes, misread criteria, or missing details.
- **Cost - Consultancy is prohibitively expensive**
Traditional consultants typically charge €2,000+ upfront plus a 2-10% success fee, which cannot be covered by grant money. This model is expensive, unscalable, and tends to focus only on the very largest projects.

How Grants8 Works (The Solution)

Grants8 acts as your automated, virtual Grants Office:

- **Push model, not search:** Instead of hunting across portals, you receive hyper-personalized, eligible grant opportunities matched to your profile and project pipeline.
- **Virtual Grants Office:** An always-on engine that continuously scans and filters opportunities based on your strategic lines (e.g. satellite services, defence & security, space infrastructure).

- **AI Co-Pilot for applications:** Guides you through the application process, helps structure the proposal, aligns content with evaluation criteria, and reduces formal risk, while you retain full control over IP.

Quantified Impact (The “After” State)

- **Time saved - Discovery:** Up to **98% reduction** in time spent searching and filtering. Grants8 uses automation and a push model to deliver only high-fit opportunities.
- **Time saved - Application prep: 40–50%+ reduction** in preparation time. The platform pre-digests requirements and structures key elements, minimizing errors and analysis time.
- **Cost:** Instead of paying thousands per project, you get comprehensive support via a subscription model (**€50/month or €500/year**), democratizing access to funding and enabling scalable internal capability.
- **Grant size potential:** Access opportunities ranging from **€30K to several million euros** that might otherwise be missed.

Why This Matters Now

- **Aligned with space & dual-use innovation:** Grants8 can be configured around strategic lines (satellite services, defence & security, space infrastructure and related innovation programs).
- **Group-level leverage:** A single configuration can later be extended to support multiple entities across the wider capital groups.

Credibility & Social Proof

Grants8 is already used by a growing set of **universities, research units, NGOs, and innovative enterprises**, and is currently being explored with **SAP** to supercharge their innovation funding process.

Call to Action

A **15-minute session** to calibrate Grants8 around one concrete initiative and decide whether to run a low-effort, **30-day pilot** focused on surfacing high-fit opportunities with minimal disruption to your team.
