# MCR Clinic™
at a Glance

1. MCR Clinic™ Summary

MCR Clinic™ significantly reduces time and costs. Only a fraction of time is necessary for Clinical Trials Monitoring compared to traditional methods and systems non-integrated with EHR. We enable Clinical Sites, Sponsors and CRO companies to increase their productivity, accelerate the process and take care of medical and substantial challenges.

MCR Clinic™ makes interoperability a top priority to improve data integrity and security through EHR to EDC integration as a single-point capture of source data

2. About MCR Clinic™ Solution

MCR Clinic™ provides truly unique IT solution developed in cooperation with all the stakeholders involved. This is Electronic Data Capture (EDC) system based on EHR2EDC integration that allows measurable time and cost savings.

We offer tailored services related to the conduct of Clinical Trial: i) Remote Trial Monitoring for Sponsors & CRO companies and ii) Online Trial Management for Clinical Sites.

We allow a smooth transition into *#HybridModel* of Clinical Trials with a reduced number of physical (on-site) monitoring visits, remote access to eSource data, and remote monitoring of Clinical Trials without 'over the shoulder' access. This means reducing the number of physical visits by monitors to sites and, over time, abandoning traditional methods altogether in favor of remote trial monitoring and online trial management.

With MCR Clinic™ patient's original Electronic Health Record becomes participant's eSource Data to perfectly spot your trial in time

3. What Problems Does MCR Clinic™ Solve?

The MCR Clinic™ IT system has been developed for the both needs of diligent Trial Monitoring by the Sponsor and effective Trial Management by the Clinical Site that are intimately linked.

As a result, it solves key problems by Sponsors' and Sites' related to trial monitoring and sponsor-site communication like: burdensome and time consuming trial startup, cumulative delays in populating data into Sponsors' databases, entering manually the same data repeatedly, duplication of data, human transcription errors, demanding considerable mental effort and skill to verify eSource data, and finally statistically non-healthy data in Sponsor's databases.

We guarantee Sponsor a Remote Access to eSource Data and finally statistically healthy data free of errors in the Sponsor's databases. We guarantee Site a full financial control on trial conduct and that all medical procedures are properly assigned to a single trial participant.

Finally, MCR Clinic™ guarantees no delays for the Sponsor and no financial losses for the Site

4. Whom Does MCR Clinic™ Help?

MCR Clinic™ helps Investigators and Site Teams with Trial Management (Online) as well as Monitors and Project Teams with Trial Monitoring (Remote) through:

- MCR Clinical Site Manager™ (CSM™) for Site Managers, Clinical Research Coordinators, Principal Investigators, Investigators and other Site Team members for effective contracting, startup, supervision and billing.
- MCR eSource Remote Viewer™ (eSRV™) for Monitor Coordinators, Monitors and other Project Team members for diligent full-scale remote monitoring on a day-by-day basis.

MCR Clinic™ system ensures the security of anonymized patient data and blocks any unauthorized access. MCR Clinic™ strongly discontinues manual data entry and manual verification in favor of automated and secure workflow without fear of losing or risk of misconducting important source data.

With MCR Clinic™ Investigators and Site Teams as well as Monitors and Project Teams may focus on medical issues and key challenges. MCR Clinic™ will do the rest integrating Clinical Trial with source EHR

MCRCLINIC

5. How Does MCR Clinic™ Improve Healthcare?

We accelerate 100% real-time Remote Monitoring of Clinical Trials through a combination of Full Automation in eSource Data Verification (SDV) and Holistic Integration with EHR and, on Sponsor's request, with other systems used in Clinical Trials (i.e. eCRF).

With MCR Clinic™ conducting Clinical Trial becomes more effective, efficient, with minimal chance for error

6. What Makes MCR Clinic™ Unique?

The uniqueness of the MCR Clinic™ system lies, among others, in the time saved on technical and operational works by Investigators and Site Teams as well as by Monitors and Project Teams.

MCR Clinic™ has the power to make measurable time savings, turning weeks into days and days into hours, and consequently significant financial savings
