

DSNEXT – AI & Software Technology Partner for European R&D Projects

Human-AI Collaboration, Knowledge Transfer, Adaptive
Learning and Enterprise Software Engineering

About Us

DSNEXT is an Istanbul-based technology SME that designs and develops mobile, web, backend, and enterprise software solutions, while developing applied R&D products in artificial intelligence, data analytics, adaptive learning, knowledge management, financial technologies, and cybersecurity.

**Transforming
businesses with
innovative solutions**

DSNEXT operates as an end-to-end delivery partner, covering business analysis, product design, software architecture, implementation, integration, and ongoing improvement. It is currently delivering production-grade solutions for established organisations in Türkiye.

Our Competences

End-to-end Software Engineering

Mobile applications, web platforms, backend services, APIs, enterprise workflows, integrations and operational dashboards.

AI and Data Analytics

LLM-enabled assistants, decision-support systems, learner modelling, predictive analytics, explainable models and AI-assisted knowledge management.

Banking and Financial Technologies

Deep operational understanding of banking IT, commercial finance, onboarding, invoice financing, credit risk, scoring, accounting.

Adaptive Learning and Workforce Development

Personal learning memory, competence-gap analysis, learning-path orchestration, mentoring, onboarding, tacit knowledge transfer and career-development journeys.

Our Projects

Parent-Child Development Mobile Application

A mobile platform focused on parenting and child development, designed to deliver structured content and digital support to families

Warehouse Management and ERP System for a Manufacturing Company

A tailored warehouse and operational management platform supporting the day-to-day inventory and stock processes of a manufacturing company.

Digital Invoice Marketplace and Financing Platform

A detailed analysis and design engagement for a digital invoice marketplace and financing ecosystem connecting suppliers, buyers, and financial services.

Our Projects

Persistent Personal Learning Memory and Adaptive Learning-Path Platform

It is designed to remember what a learner has encountered, understood, misunderstood, practised, and may be at risk of forgetting, and to use that evolving evidence to recommend the next most appropriate learning action.

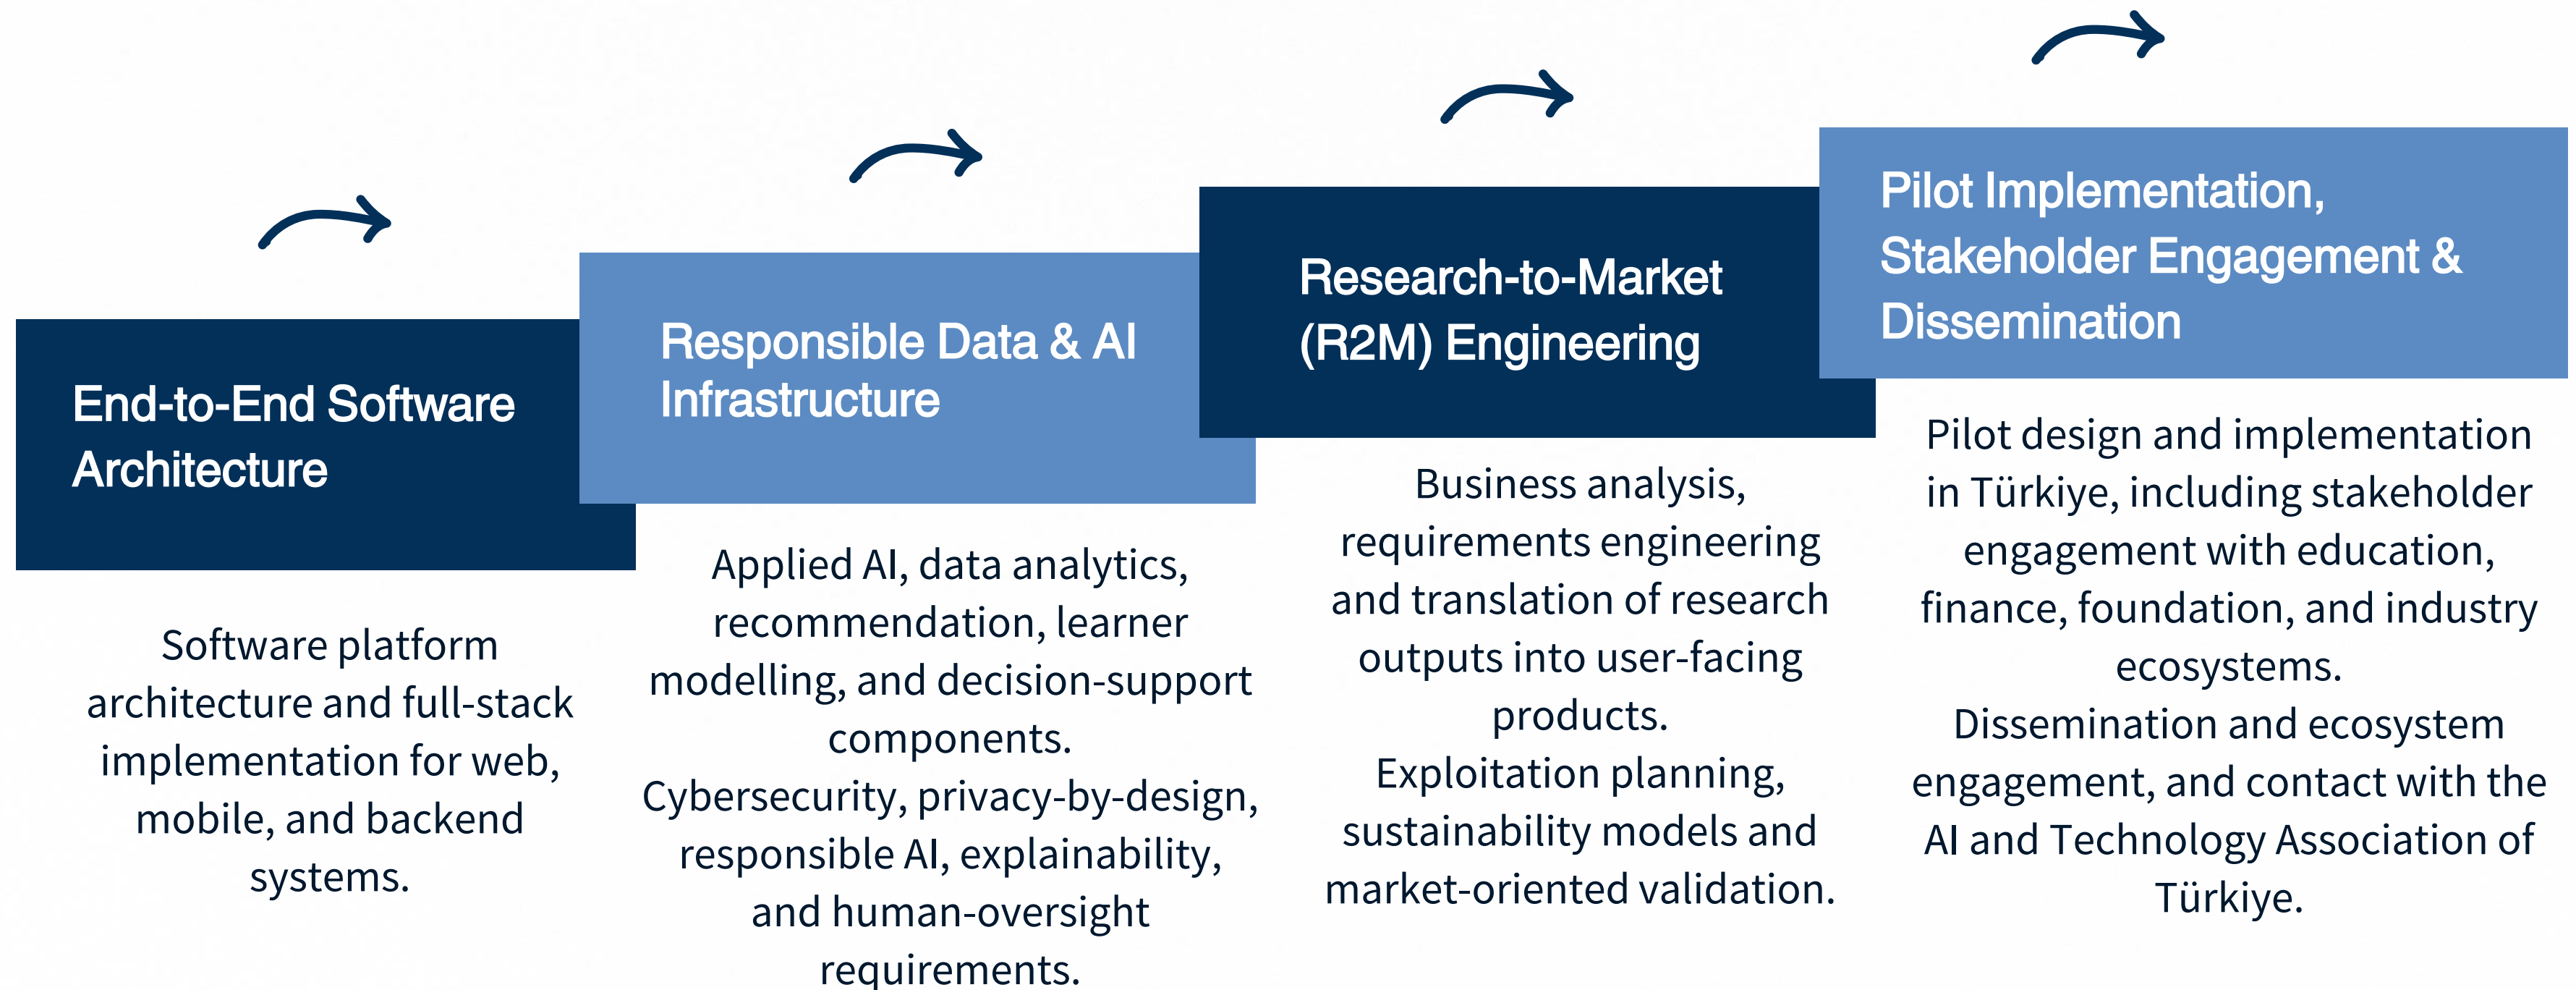

AI-Supported Intergenerational Mentoring and Experience Transfer

It aims to connect experienced professionals aged 50+ with early-career graduates and support a structured six-month mentoring and onboarding journey, initially in the banking sector.

AI-Based Commercial Credit Payment Risk Scoring and Decision Support Platform

A data-driven decision-support platform designed to measure and anticipate commercial credit payment risk by modelling the historical payment behaviour of companies using financing products.

Our Roles in Projects
