

İŞYAZILIM

İş Yazılım was established in 2009, in Ankara/Turkey. Our headquarters is in Gazi University Technopark. For 14 years, we have designed, developed and deployed software solutions for more than 250 governmental organizations and institutes as well as more than 100 private companies. We have provided all kinds of services related to the software development for our clients. We make analysis, documentation, development and provide training, support and warranty. We have a long term experience on developing tailor made solutions. Data and document management, e-governmental solutions and workflow design are our expertise. We utilise agile/scrum methodology for maximizing our productivity and minimizing the time needed for software design and development processes. We create self-organizing, cross-functional teams, divide development process into increments and produce functioning software with continuous development/continuous delivery principle.

İSYAZILIM

As Is Yazilim, we keep in contact with our clients/project stakeholders during the development process. We inform them about every step we take in design and development and make revisions they demand so readily. Thus, we avoid time-consuming error recovery periods after the completion of development. Our UI and UX designers create unique interfaces and templates in line with our clients' demands. We manage our works on Azure DevOps Platform. We have an experienced developer team that use .NET Framework, ASP.NET Core and Angular as frameworks for backend and frontend development. C# and JavaScript programming languages, MSSQL, Oracle SQL and PostgreSQL database management systems are our expertise.

kamusis

"Environmentally Friendly Software Solutions"

Kamusis is a software solution provides an electronic document management system and a digital archive management system together. It is developed on .NET platform with MSSQL and Oracle databases as a web-based solution. You can use Kamusis on web browsers without downloading any application. Kamusis provides flexible and easy-to-use workflow design tools to help you for continuously changing workflows and business processes. Kamusis enables you to design your workflows and processes on your mobile devices with its mobile application as well. With e-correspondence and electronic document transfer functions, you can share your designs with your co-workers, customers and business partners easily. You can make revisions and benefit from optical character recognition functions on Kamusis. With e-signature and mobile signature functions you can sign your prepared corporate documents.

docusis

"Create Your Ideas"

Docusis is a web based software platform that you can customize according to your corporate needs. Dynamic workflow and form design tools help you to transfer all your corporate documents and processes into the electronic environment and make it easy for you to manage them. You can use Docusis easily without having software basics with the help of its drag and drop function. With Docusis Form Management tools, you can transfer your printed forms into web based forms and share them. With Workflow and Process Management tools, you can design your workflows and processes electronically and make them more productive with the help of AI components. With the integration function, you can transfer your designs made in other applications into the Docusis. You can e-sign and mobile-sign your documents in Docusis. It also has a mobile application.

"Clay tablet in old Turkish"

Yartu is an open source software platform developed as an alternative to the MS Office 365 software suite. It provide e-mail, drive, office, project, calendar, conference, notes and contacts modules in a single application as a software suite for various office works. You can access Yartu on cloud servers(private or public)and on your corporate servers. With Yartu E-Mail, you can use your corporate e-mail service with your own domain name on your own server safely and cheaply. With Yartu Drive, you can store all kinds of corporate documents, images and videos on your servers and access them on your computers, tablets and mobile devices. With Yartu Office, you can create and edit your documents without having another office software or needing any license. You can also screen and edit documents produced in other office programs with Yartu on web browsers. With Yartu Project, you can manage your projects and design your workflows. With Yartu Calendar, you can plan your works, mark special days and programs and share your calendar with your business partners. With Yartu Contact, you can store and share your corporate contact information on your server or on cloud servers. With Yartu Notes, you can transfer all corporate notes into the electronic environment, design and share them with others.

FinTech Solutions

Central Invoice Record and Validation Software

Central Invoice Record and Validation System software is developed to help participation banks for tracking the main features of the Islamic banking, for taking records of various service components provided by these banks centrally and for preventing repeating or fictitious transactions. The system is a service-based platform, which works integrated with core banking software of participation banks, where search and registration processes are managed. Since the platform has access to the records of all participation banks in the system, it prevents a financial application from exceeding the amount of money in an invoice with repeated applications by using the same invoice. It also provides the information about total amount of funds that can be used jointly by all the participation banks in the system while keeping the information about share used by a given bank anonymous.

FinTech Solutions

Participation Banking Credit Guarantee Fund

Participation Banking Credit Guarantee Fund was established by the participation banks operating in Turkey and the Participation Banks Association of Turkey (TKBB) in cooperation of the Ministry of Treasury and Finance of Turkey in order to increase financial inclusion of SMEs and non-SME companies which cannot get enough loans due to the lack of deposits. Participation Banking Credit Guarantee Fund Software System is demanded by the Fund that provides loans with its equity capital via the participation banks and guarantee for the loans. The system checks the written form requirements determined by the Fund and is used by the participation banks to provide loans to the companies that are found eligible after evaluation.

Retail Customer Arbitration Board Software

With Retail Customer Arbitration Board Software, processes managed by the arbitration board that was organized, for settling disputes and disagreements that may occur between participation banks and their customers, by the Banking Regulation and Supervision Agency(BDDK) and the Participation Banks Association of Turkey(TKBB) are digitalized. The software receives customer complaints through e-devlet (e-government web service) and reviews the complaints with the written form requirements before sending them to related banks via web service. The banks provide feedback for the complaints and try to find solutions for customer problems. If a dispute is not settled between a bank and its customer, than the arbitration board takes action. It settles the dispute and informs both parties about its decision by using the web service as well.
