

Features

C3

upandbike® C3 is a modular bicycle parking system, with a choice of one or two levels. Its supports allow you to optimize space by slightly rotating the front wheel to avoid collisions between handlebars. The horizontal profile guarantees stability and allows you to lock the rear wheel and frame simultaneously, offering optimal security against vandalism. These supports are compatible with most bicycles and scooters.

Technical specifications

Materials and construction

Steel metal structure with anti-corrosion treatment

Sheet metal roof with water drainage

Side closures with perforated steel sheet and smooth steel sheet in vinylable areas

Modular and expandable system

Functionality and use

Interior and exterior LED lighting with presence detection

Door control and opening via the **upandbike App**

Safety and protection

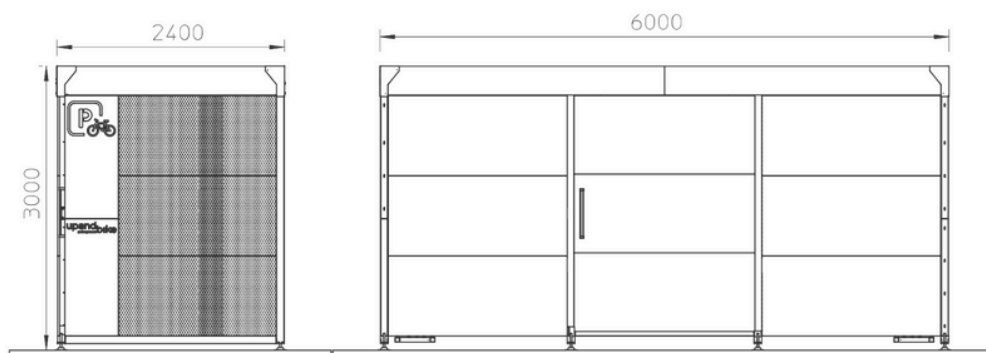

Interior supports to anchor the bike/scooter securely

Installation and design

Customizable vinyl

Integrated design in the urban environment

Direct anchoring to the ground (asphalt or cement) / Easy relocation / No civil works required
