PROJECT COOPERATION

Your technical partner for AI projects and consortia.

We join projects as the team that designs, builds and runs the AI part: for companies, public institutions and research or EU-funded consortia.

WHAT WE BRING TO A PROJECT

- **Voice and chat AI** in production, with telephony and CRM built in-house
- **Custom software around the AI:** case management, integrations with existing systems, dashboards
- **On-premise deployment** for data that cannot leave a country or an institution
- **Real deployments:** a citizen-report system for a public institution (in contracting) and an 11,000-call pilot with a telecom operator

WHERE WE FIT

- Public services: citizen requests, hotlines, reporting
- Digital inclusion: voice access for people who don't use apps
- SME digitalisation and AI adoption programmes
- Industry projects that need an AI developer in the consortium

PROJECT COOPERATION

From the proposal to the pilot.

We have prepared and contributed to applications for European and national programmes, and we know what evaluators look for in the technical part.

01

Shape the idea

We turn a need into a project with a clear technical scope.

02

Write the technical part

Architecture, work plan, TRL, risks and budget for the AI work.

03

Build & pilot

We develop the solution and run the pilot with the end users.

04

Run & scale

We keep it running after the funding ends, as a product.

Looking for a technical partner for an upcoming call? Let's meet and check if we fit.
