

ordis

Voice-first documentation for frontline care.

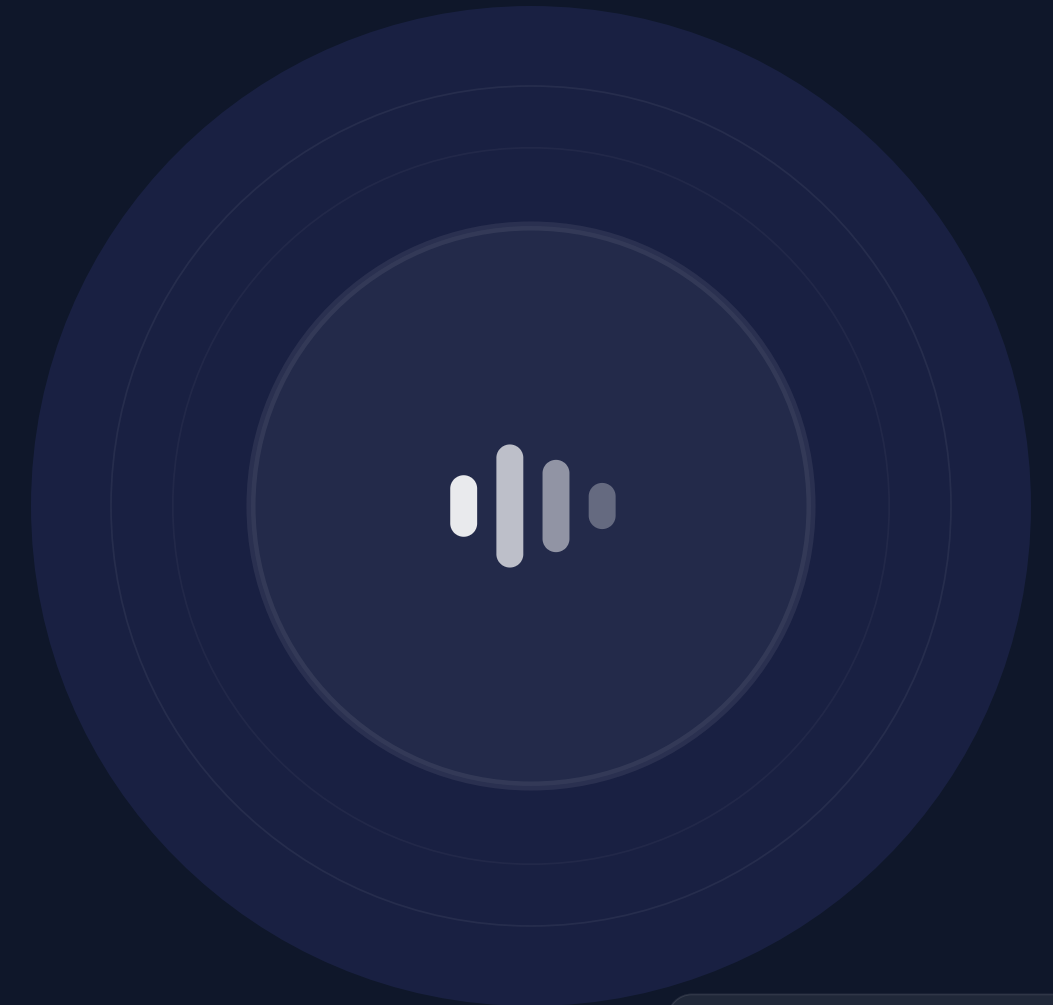

Reduce documentation time. Improve compliance. Fit into
your existing workflows.

Incident Report

Shift Handover

Progress Note

Compliance Report

THE PROBLEM

Frontline care is losing time to documentation.

- Nurses spend significant shift time on reporting
- Documentation is often completed retrospectively
- Gaps and inconsistencies increase compliance risk
- Existing systems capture data, but don't help create it

40%

of shift time spent on
documentation

1 in 3

records completed after
end of shift

#1

source of compliance
risk in aged care audits

Less time for care. More operational pressure.

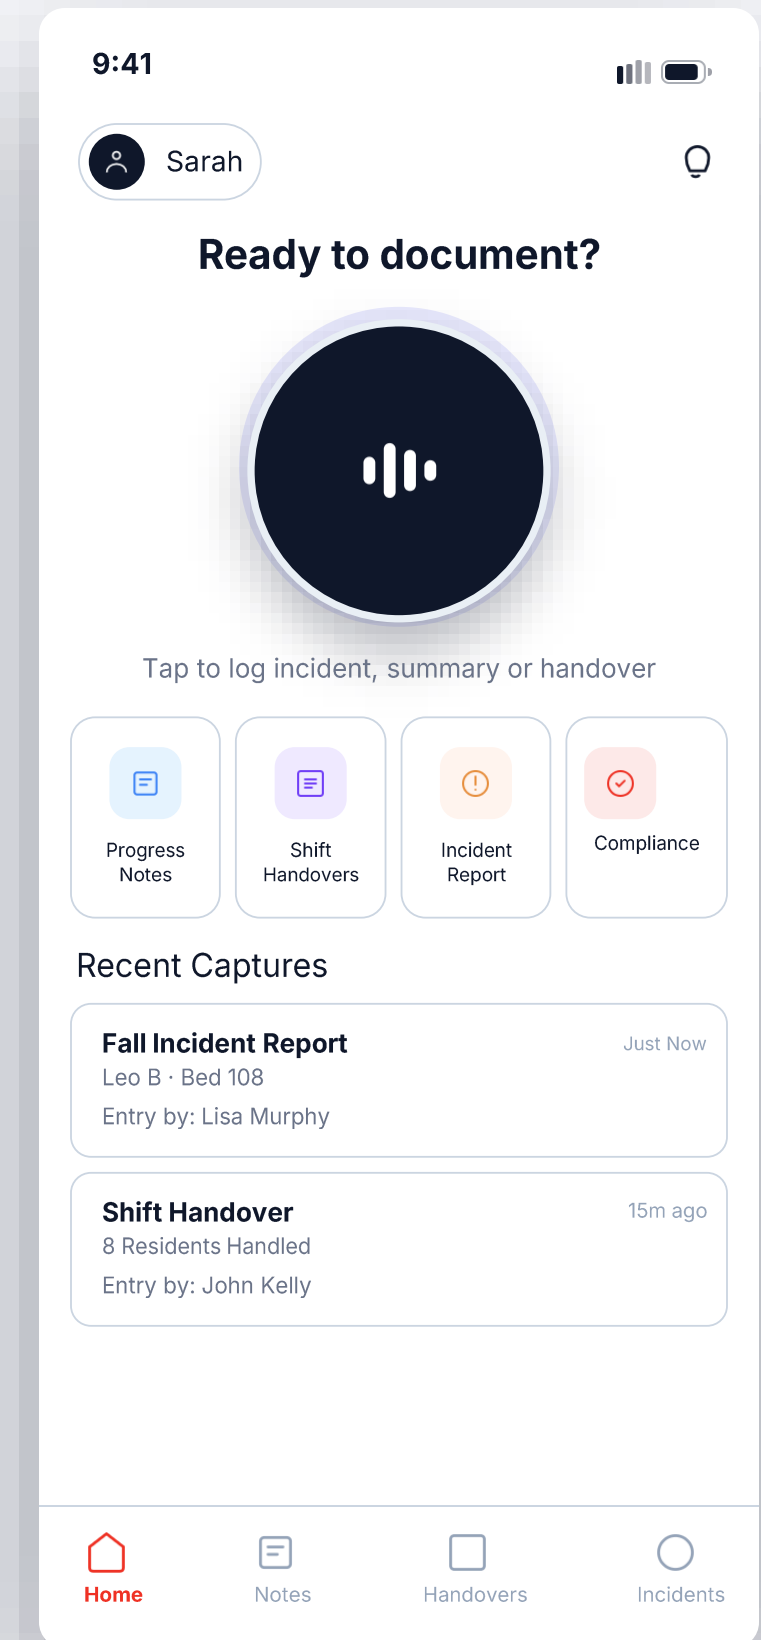

THE SOLUTION

Capture documentation at the point of care.

- Staff speak naturally during or after care
- Ordis converts speech into structured records
- Outputs align with your existing documentation formats
- Data flows directly into your current system

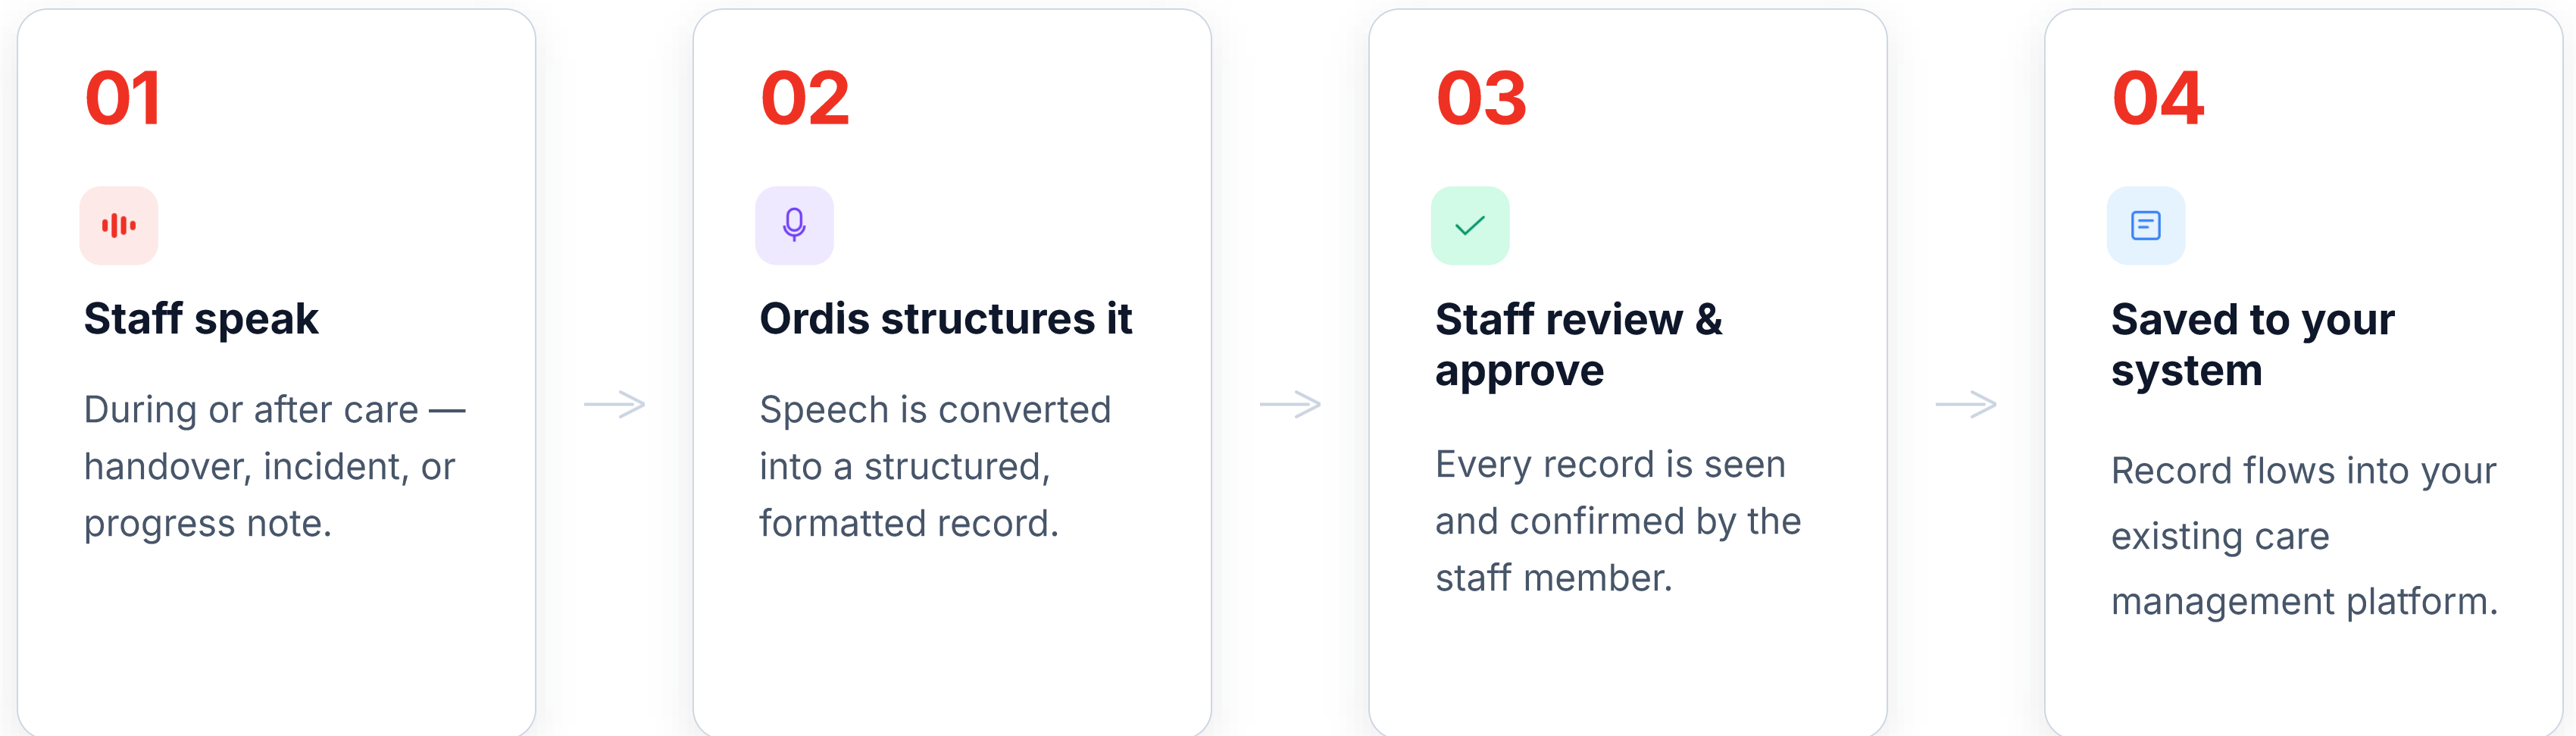

No new system. No duplication. No disruption.

HOW IT WORKS

A simple, human-reviewed workflow.

Always human-reviewed. Never automated decisions.

CUSTOM TEMPLATES

Documentation that fits your organisation.

Ordis doesn't impose a format - it adapts to yours. Templates are built around your existing policies, compliance requirements, and internal standards.

- Aligned with your internal policies and compliance requirements
- Standardises documentation quality across all teams
- Extends to operational and compliance documentation

Incident Report

Auto-filled

Resident

Leonard Barry - Bed 108

Incident Type

Fall - unwitnessed

Notes

Found on floor beside bed. No visible injury. Call bell within reach. GP notified.

Time

14:32

Recorded by

Lisa Murphy

Voice input → structured record in seconds

DOCUMENTATION COVERAGE

Across all documentation workflows.

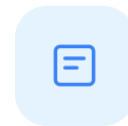

Staff Handovers

Shift-to-shift summaries,
structured and complete

Incident Reporting

Falls, behavioural
incidents — captured at
the moment

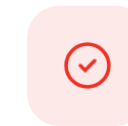

Progress Notes

Ongoing resident care
updates, recorded in real
time

Daily Logs

Routine observations and
care activity records

Compliance Docs

Operational records
aligned with audit
requirements

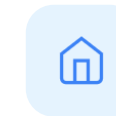

TESTED IN REAL CARE ENVIRONMENTS

Built with continuous staff feedback.

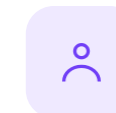

Not tested in a lab. Built iteratively across real care settings with frontline nurses at every stage.

SETTINGS

Elderly Care Homes

Nursing home environments with complex, high-volume documentation

Intellectual Disability Settings

Specialist care with detailed, person-centred documentation needs

HOW WE BUILT IT

Continuous feedback

Nurses involved at every phase, not just testing

Iterative improvements

Each round of feedback shaped the next version

OUTCOMES

Better documentation, less effort.

20-30

minutes saved per shift once fully implemented across channels you see better results

Improved consistency and completeness of records

More accurate real-time documentation

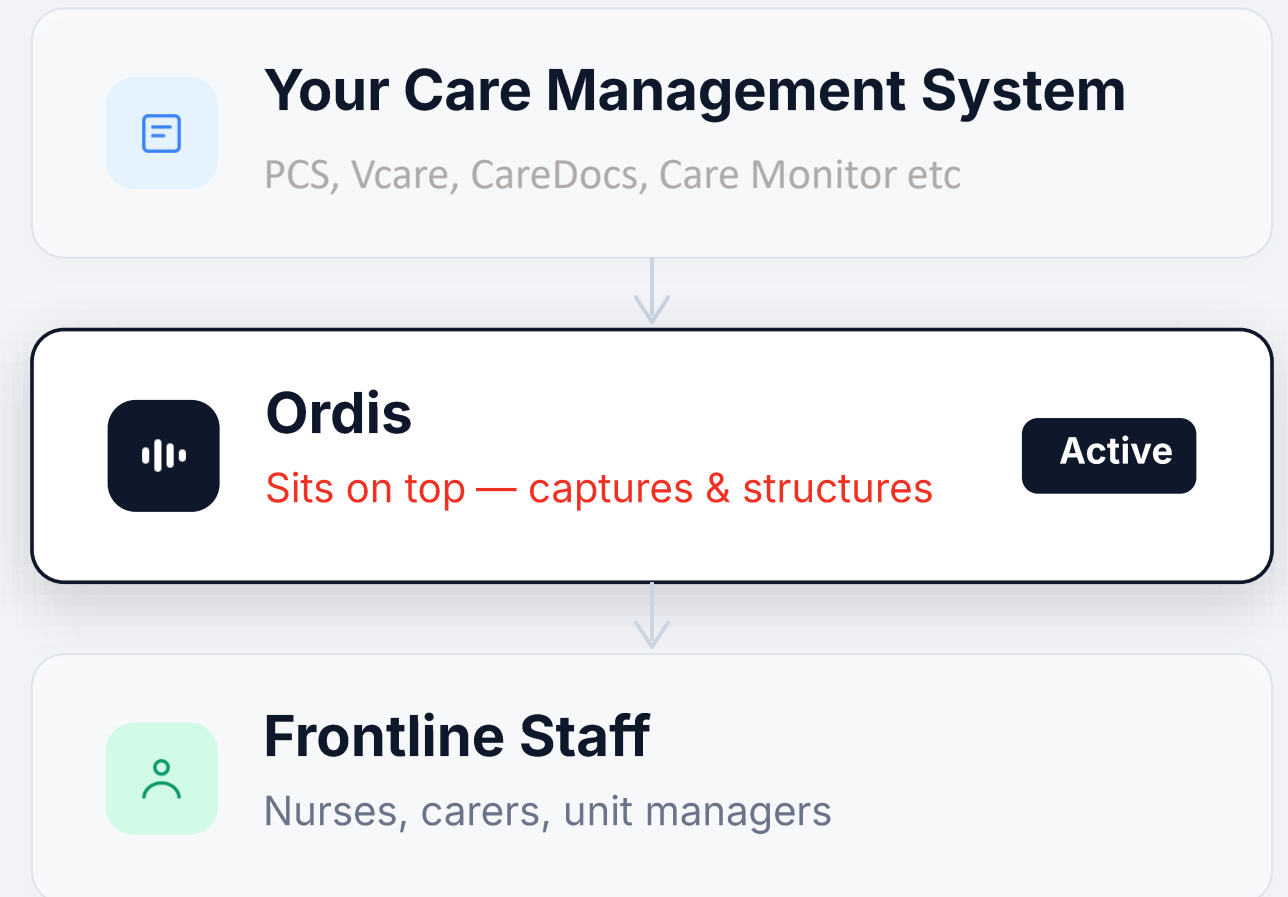

Reduced end-of-shift workload and recall

INTEGRATION

Works with your existing systems.

- Integrates with platforms like Nova e-nursing
- No need to replace current software
- No duplicate data entry
- Minimal disruption to staff workflows

Ordis sits on top of what you already use.

COMPLIANCE & DATA

Built with compliance at the core.

Designed for audit, inspection, and accountability.

- ✓ Human-in-the-loop at every stage - no automated decisions
- ✓ Full audit trail: input → output → edits → final record
- ✓ GDPR compliant and DPA-ready
- ✓ No clinical decision-making by the system
- ✓ No data processed by third-party AI providers
