

Grants8 for Innovation Leaders

Supercharge your business with grants.

Grants8 allows you to transform a complex application process into a predictable machine for scaling your company:

- **Non-dilutive funding:** Build a stable capital acquisition channel. Increase the liquidity and margins of your projects and finance growth without giving up equity to investors.
- **R&D risk transfer:** Finance your boldest innovations with external funds, completely removing the financial risk from your core operating budget.
- **Accelerated expansion:** Leverage grants for immediate entry into new markets. Participation in international consortia directly translates into strategic business partnerships, free PR, and organic growth.
- **Competitive advantage:** Increase the throughput of your submitted applications and secure capital faster. Gain a drastic advantage over competitors who still waste hundreds of hours on bureaucracy.

Current problems - why the process does not work:

- **Fragmentation and time loss:** Your team wastes 80 to 200 hours a year manually browsing portals and filtering irrelevant newsletters.
- **High formal risk:** Unclear documentation and differences between platforms drastically increase the risk of application rejection due to formal errors.
- **Prohibitive consulting costs:** Traditional consultants charge tens of thousands for a single project. This model is expensive, unscalable, and cuts off smaller projects.
- **Misallocation of talent (Opportunity Cost):** Your top engineers and technical leads should be building and shipping technology, not drowning in compliance forms and bureaucratic paperwork.

The Solution - Your Automated Grants Office:

Grants8 reverses this process. Instead of searching, you receive ready-made matches:

- **Push Model Automation:** Our engine scans the market 24/7 and proactively pushes only the grants that perfectly match your profile. You never miss an opportunity again.
- **Unified Workspace:** Consolidate your entire grant strategy. Instead of distributing your R&D projects among different external consultants and losing track of progress, manage all your funding initiatives in one centralized, secure platform.
- **Intelligent consortium building:** Creating your own project? The system will suggest partners interested in participating. Prefer to join an existing initiative? Instantly find an active consortium and start collaborating with innovative companies from around the world.
- **AI Assistant:** Guides you through the proposal building process, structures the content to meet evaluation criteria, and limits formal risk, keeping your IP 100% secure.

Measurable benefits and ROI:

- **Time saved (Discovery):** Up to 98% reduction in time spent searching. Grants8 uses automation to proactively deliver only the best-matched opportunities.
- **Faster application:** Significant reduction in proposal preparation time. The platform pre-analyzes requirements and suggests answers, minimizing analysis time and errors.
- **Cost democratization:** Instead of paying tens of thousands for a single project, you receive comprehensive support in a subscription model.
- **Grant size:** You unlock access to funding pools ranging from 30 thousand to several million euros.
- **Strategic value:** A winning grant acts as a quality seal for your technology, driving brand awareness and accelerating global expansion.

Next step:

Instead of scheduling a demo presentation, the fastest way to validate the value of Grants8 is to test the platform on your own project. Focus on discovering high-match opportunities while minimizing disruption to your team.

Create an account, complete a short onboarding, and let our AI find the first customized funding recommendations for your company.

Start here: <https://app.grants8.com/>

If you have any questions while testing the platform, I am at your direct disposal.
