Galicia: Naval & Maritime Strength

Asime

The Galician Association of Metal Industries and Related Technologies (Asime) has been strengthening the Galician industry for more than 45 years, with the shipbuilding and maritime industry as one of its key pillars.

Asime represents all segments of the naval construction and repair value chain. It brings together more than 270 naval associated companies ranging from shipyards, engineering companies, classification and certification companies, suppliers of capital goods and supplies, qualification companies, installers and mechanical companies.

The number of naval and maritime companies associated with Asime has grown exponentially over the years, demonstrating the loyalty of the companies and the added value offered by

Asime to promote this industry, which is strategic for Galicia as a source of employment and wealth.

Located in the northwestern corner of the Iberian Peninsula, Galicia's privileged geographical location, with more than 1,500 km of coastline, makes it an ideal location for the shipbuilding industry. Our industry, which is located mainly in the estuaries of Vigo, Pontevedra, Coruña and Ferrol, offers a wide range of services for the construction and repair of ships.

Among these locations, the geographical characteristics of the Vigo and Coruña estuaries stand out for their natural depths, shelter and protection, as well as the facilities of the public shipyards of Navantia and a rising hub for offshore wind power in the Ferrol Estuary.

Galicia: Naval & Maritime Strength

The Galician Industry

The Galician shipbuilding industry is made up of more than a dozen shipyards, both private and public and more than 270 auxiliary or complementary companies, with shipbuilding and ship repair being one of the most relevant activities in the Galician economic structure. This industry generates more than 8,000 direct jobs in Galicia.

Its strategic location and the high quality of Galician infrastructure have made possible the development of increasingly advanced technology, which has allowed the industry to specialise in ships with high added value.

The Galician shipbuilding and maritime industry has very extensive know-how that covers the entire value chain, something that is highly valued abroad. Thus, 90% of the ships built in the last decade in Galician shipyards are destined for export.

The private sector is mainly located in the Vigo and Pontevedra estuaries. Its companies have made a major effort to modernise and specialise, with great international capabilities. The Galician industry is moving rapidly towards process digitalisation and automation, ship electrification and new fuels or future segments such as research vessels, autonomous ships or new materials.

The Ferrol Estuary is home to Navantia's public shipyards which, together with the local auxiliary and complementary industry, offers a comprehensive shipbuilding and ship repair service, especially in the military ship segment. In recent years, Galicia has also become an international hub with enormous potential in offshore wind energy, both in the construction of foundation structures and in the value chain of ships and services for offshore wind farms.

Galicia: Naval & Maritime Strength

Shipbuilding and ship repair

Shipbuilding and ship repair is one of the most important activities within the industrial structures of Galicia and Spain. They are highly specialised in the construction of vessels with great technological innovation, such as research ships, hotel ships, service ships for oil platforms and offshore wind farms, fishing vessels, chemical tankers, multipurpose vessels, seismic vessels, dredgers, tugboats, etc.

The auxiliary and complementary industry has experienced significant growth in recent years, becoming a fundamental axis of the economic fabric and consolidating itself as a major source of specialisation. In addition, it is worth highlighting the importance of construction and repair of all types of sports boats, something that has become a thriving area within this industry in recent years.

Within the auxiliary or complementary industry, the main companies dedicated to boilermaking and industrial piping, electricity and electronics, naval fitting, hydraulics and pneumatics, naval mechanics, machining, welding, processes and procedures, painting, surface treatment and coatings are all members of Asime.

Also of great relevance are the companies dedicated to propulsion systems, engineering, supply of naval communications equipment and navigation aid systems or design of customised integrated bridges, which allows us to offer from Galicia an integral solution to any demand, however specialised or specific it may be.

Maritime Trends

International Naval, Maritime & Port Summit

MaritimeTrends is the reference summit to discuss the present and future of the naval, maritime and port activity. It brings together the key actors in the maritime industry at international level: companies, organizations and institutions that will reflect on current state of the art and upcoming challenges for the sector.
