AM Energy is a Latvian company that owns a wood plastic composite (WPC) production plant. Their products are made from a unique blend of natural materials – wood and plastic – which combines the beauty and diversity of wood with the durability of plastic. This synergy ensures that our WPC products are of high quality, offering enhanced resistance to UV rays, moisture, and stains.

We produce two brands of composite materials: ECO Terrace, our first-generation product with hollow and solid boards, and HARDDECK, a second-generation, two-layer composite material.

Our main products are terrace boards, but we also manufacture boards for fences and facades.

**Contact:** Alise Novikova, COO

[alise@rebarmat.com](mailto:alise@rebarmat.com), +371 29575712

REBARMAT® GFRP rebars are lightweight, durable, and designed to outperform traditional steel reinforcement in strength, corrosion resistance, and cost-efficiency. Engineered for demanding applications, they provide exceptional mechanical stability and long-term durability.

Produced in our 2,000 m<sup>2</sup> facility in Latvia with 15 years of expertise, REBARMAT® produce CE-marked GFRP rebars certified under EAD 260023-00-0301—the first European standard for GFRP reinforcement. Our production process, powered by solar energy and using high-quality European materials, minimizes environmental impact. Furthermore, the significantly lighter weight of GFRP rebars reduces transportation emissions and simplifies handling on-site, contributing to a lower overall carbon footprint throughout their lifecycle.

REBARMAT® offers a high-performance, sustainable solution for construction projects requiring advanced reinforcement. Experience the next generation of reinforcement with REBARMAT®.

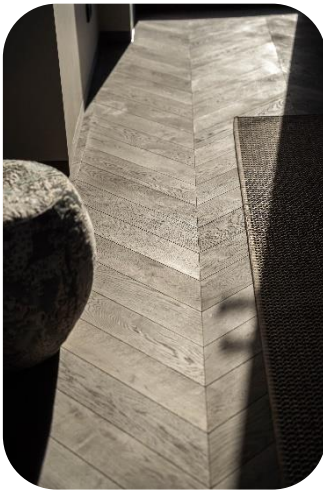

# RIGA PARKET
