

Who we are

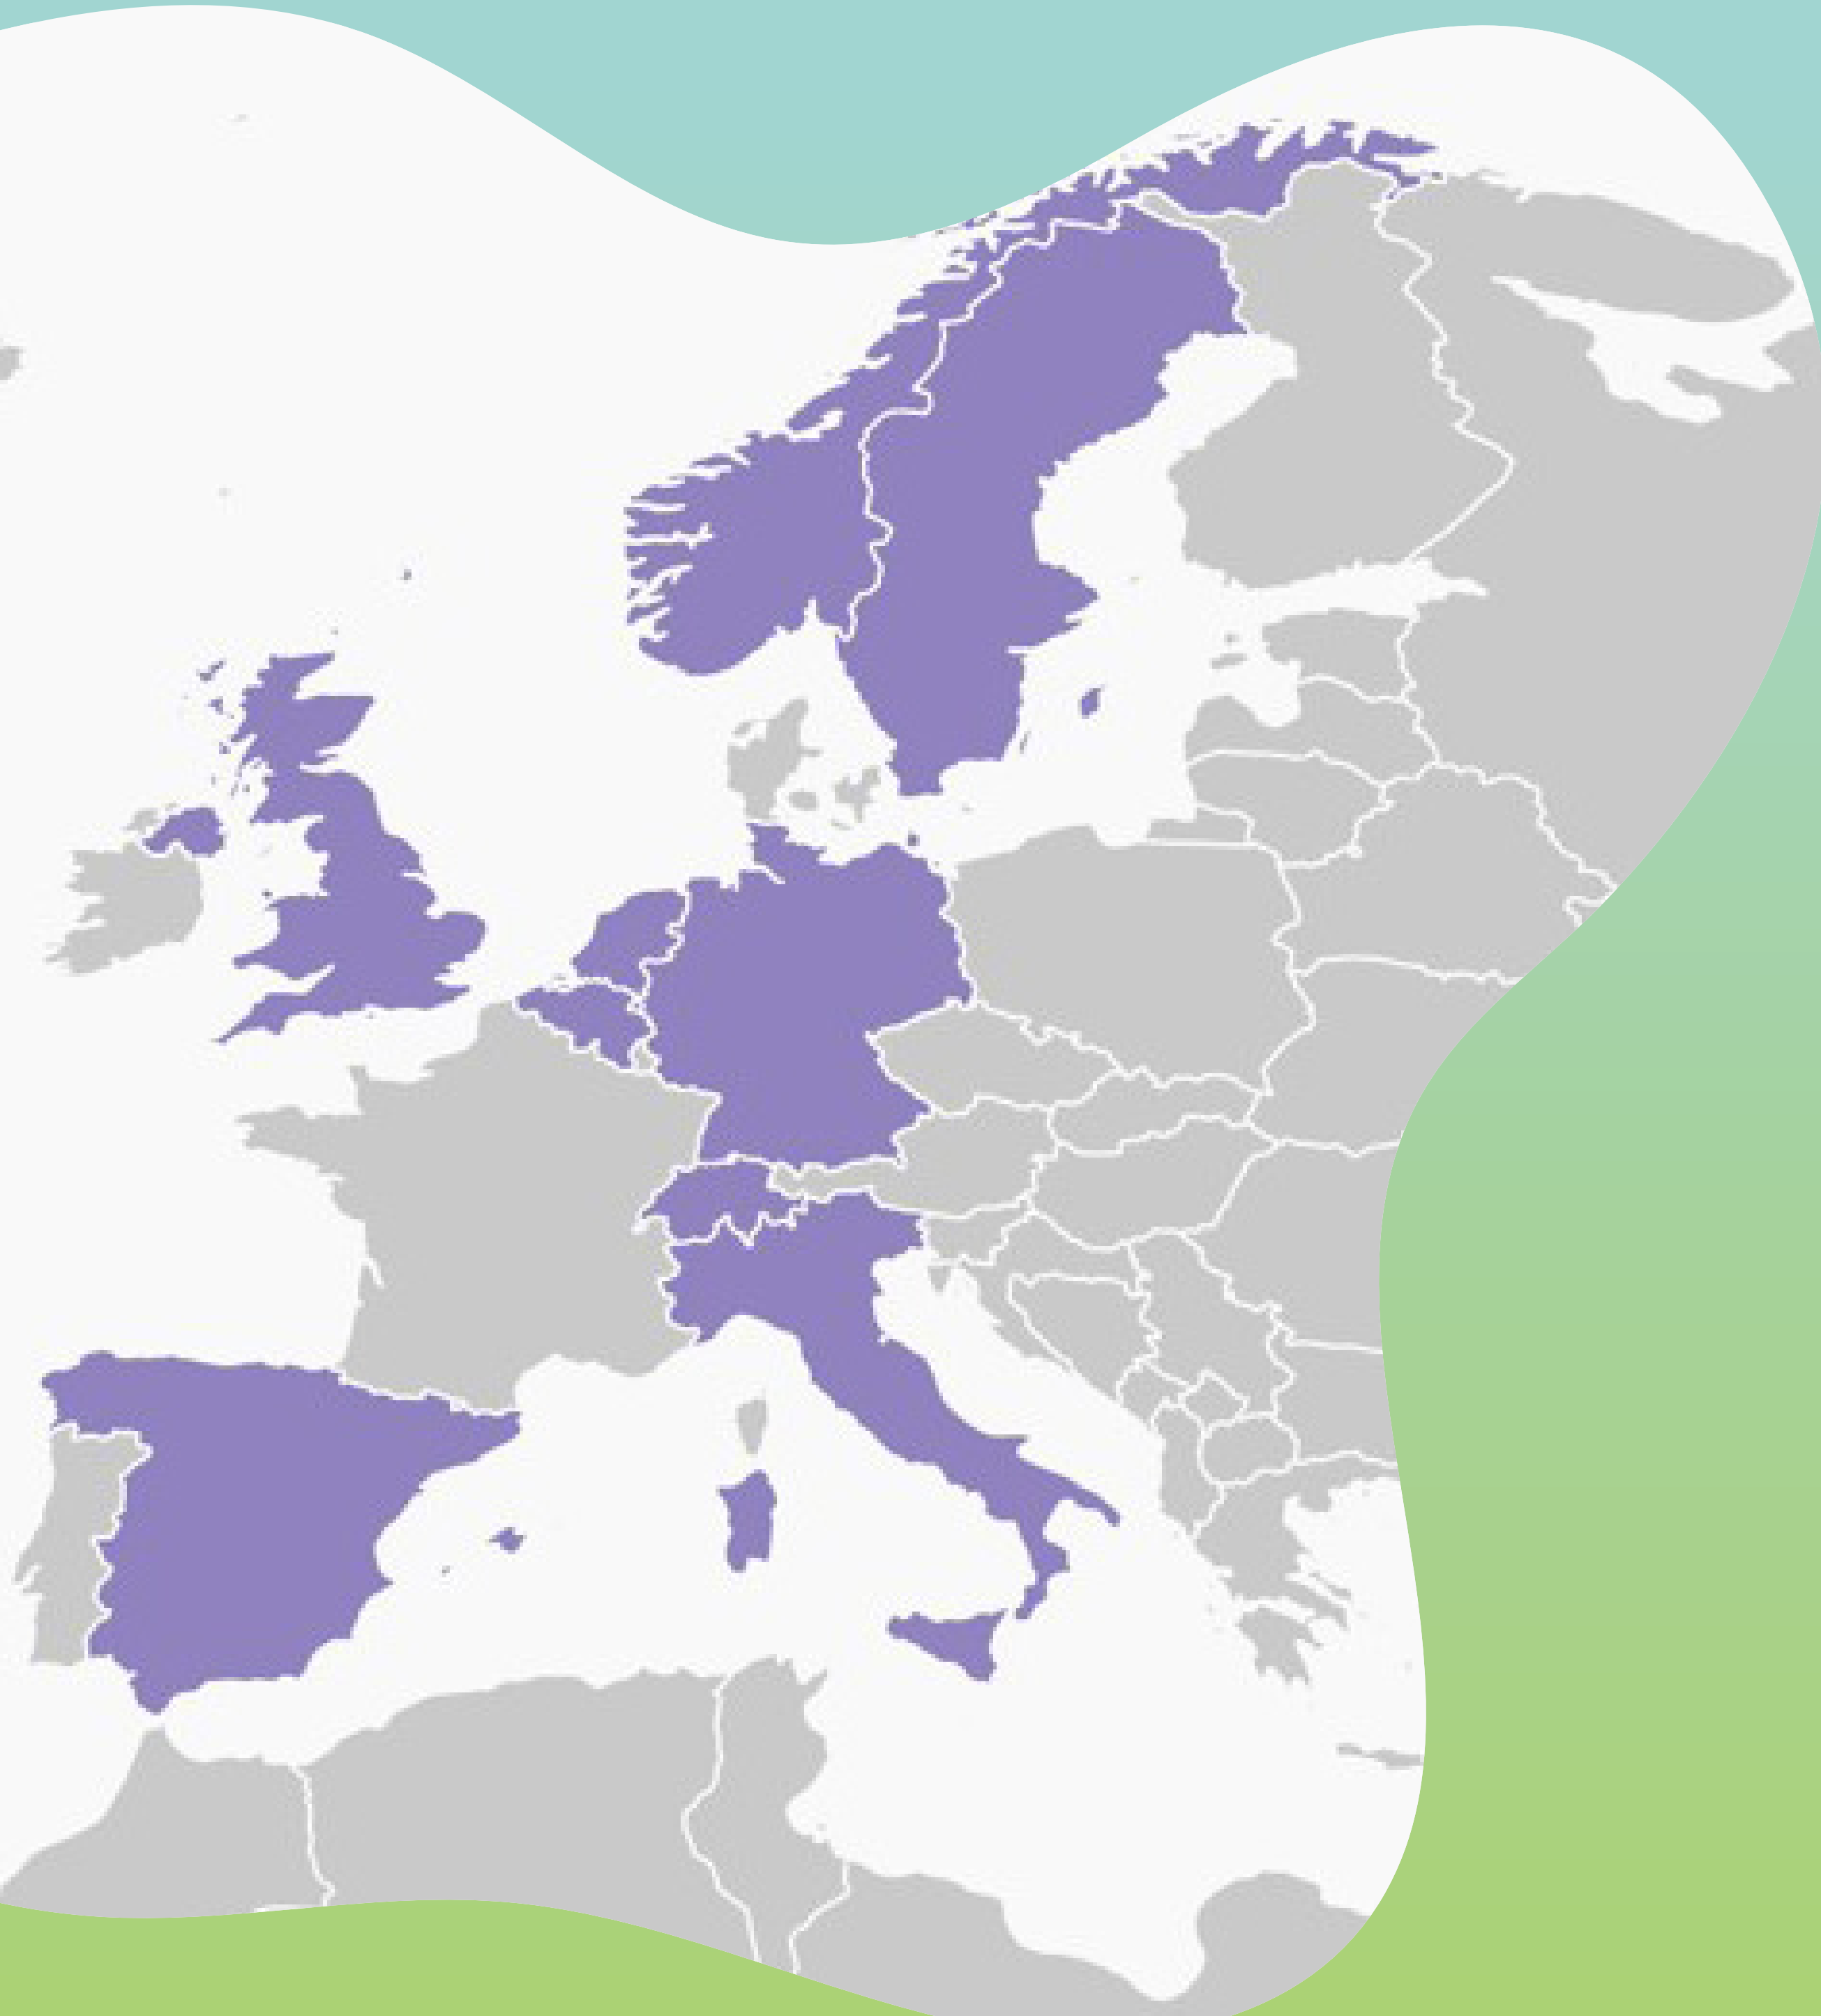

GLIOMATCH unites European clinicians, researchers, data scientists and patient representatives to develop more precise, personalised treatments for adults and children with malignant brain tumours.

What we are working on

We combine tumour profiling, MRI and clinical data to identify immunotherapy biomarkers and build a digital matchmaker for personalised treatment selection and monitoring.

What's the one thing we need next

We need prospective multicentre studies to validate biomarkers and digital tools, bringing personalised immunotherapy closer to routine clinical practice.
