

Project Summary

We are developing **HeyHolo Health**, an **AI-driven multimodal reminder and monitoring device** designed for **personalised medication and health management**.

The device integrates **voice, video, and sensor data** to assist patients—especially those with **multiple chronic conditions**—in managing their daily treatments.

Using **multimodal AI analytics**, HeyHolo interprets user interactions and physiological data to deliver personalised health insights and reminders in real time.

Partner Search

We are looking for:

- 🏥 **Clinical partners** for real-world testing and validation.
- 🧠 **Research institutions** specialising in multimodal data or healthcare AI.
- 💡 **SMEs / tech companies** developing wearables or digital-health platforms.
- 👤 **Patient organisations** for participatory design and usability feedback.

MULTIMODAL MONITORING AND REMINDER SYSTEM FOR PERSONALISED HEALTH AND MEDICATION MANAGEMENT
