

NEXOFAB

ENERGETIC PREFAB ELEMENTS

“Unlock the future of modular prefab construction with cutting-edge Nexotechnology™ and our sustainable building solutions.”

1 A transformative opportunity to redefine sustainable modular prefab construction and off-grid living through the seamless integration of advanced renewable energy and AI-driven smart technologies.

At NEXOFAB™, we are revolutionizing the way the world builds, lives, and powers its future. By utilizing advanced 3D-printed prefabrication and our innovative Nexo-technology™, we convert waste plastics into high-performance, lightweight structural composites and insulation through carbon sequestration. The result is a sustainable, durable, reusable, energy-efficient, and fully integrated building element that sets a new standard for the off-site modular prefab construction, infrastructure industry, and the built environment.

"With NEXOFAB™, you're not just building structures, you're creating intelligent, sustainable, and energy-efficient spaces for future generations."

2 We set a new benchmark combining sustainability, innovation, and cutting-edge technology to redefine industry standards.

Our fully integrated composite building elements, the Nexo Prefab Construction System™, establish a new benchmark for both permanent and temporary construction.

But we don't stop there. By seamlessly incorporating our advanced Nexo solar technology, our Energetic Prefab Elements™ transform modular buildings into self-sustaining power plants, capable of generating renewable energy and enabling off-grid living.

This powerful fusion of 3D-printed advanced lightweight composites, prefab efficiency, and PIPV Nexo solar energy innovation empowers you to create smarter, greener, and more future-proof living spaces, designed to meet the demands of tomorrow.

“Combining cutting-edge materials, AI-driven technologies, and an unwavering commitment to sustainability, we deliver smarter, greener, and transformative innovative building solutions.”

3

Why partnering with NEXOFAB™ ensures unwavering success in the future of construction.

The Nexo Prefab Construction System™

Designed for rapid off-site production and efficient on-site assembly, drastically reducing time and costs. They also come with pre-integrated utilities, including cables, piping, ventilation, and drainage systems, ensuring maximum functionality and adaptability.

Energetic Prefab Elements™

For those seeking energy independence, our Energetic Prefab Elements™ take construction to the next level. These components incorporate nexo solar technology, enabling your modular projects to generate renewable energy, support energy sharing and achieve energy independence.

“Together, perfectly positioned to drive the transition, we can turn today’s challenges into tomorrow’s opportunities.”

4 United as one, transforming the built environment for generations to come.

This is your opportunity to lead in a rapidly expanding market and be part of a groundbreaking transformation. We are actively seeking strategic partners, agents, and investors who share our passion for innovation and sustainability. Whether through joint ventures, technology integration, or collaborative partnerships, we offer patented technologies, expertise, and equipment to help you succeed in the future of construction.

By joining forces, we can turn today's challenges into tomorrow's opportunities, setting bold new standards in construction and energy for future generations. If this vision aligns with your organization's objectives, we would be eager to arrange a call to discuss how we can collaborate and make a lasting impact.

"We are the creators, driving a revolution in how the world builds, lives, and powers its future. Backed by patents, expertise, and a visionary approach, NEXOFAB™ is reshaping the future of construction, energy, and sustainable living."

5 Redefining construction, living, and sustainability with patented innovation and vision.

- Rapid off-site production and efficient on-site assembly, drastically reducing time and costs.
- Full integration of utilities, such as cables, piping, ventilation, and drainage systems, for maximum efficiency.
- High-end renewable energy generation, powered by solar technology, enabling buildings to function completely off-grid and achieve total energy independence.
- AI-driven smart living systems, featuring intuitive avatar- and voice-controlled interfaces, for unparalleled user convenience and adaptability.
- The ability to share surplus energy, seamlessly redistributing it within private or public networks, supporting a sustainable energy ecosystem.

If this vision aligns with your goals, we would be delighted to schedule a call to explore how we can collaborate and make a lasting impact.

NEXOFAB

ENERGETIC PREFAB ELEMENTS

"Join us in redefining the standards of prefab construction and renewable energy for a brighter tomorrow."
