STRATEGIC LOGISTICS POSITION

MASTER PLAN

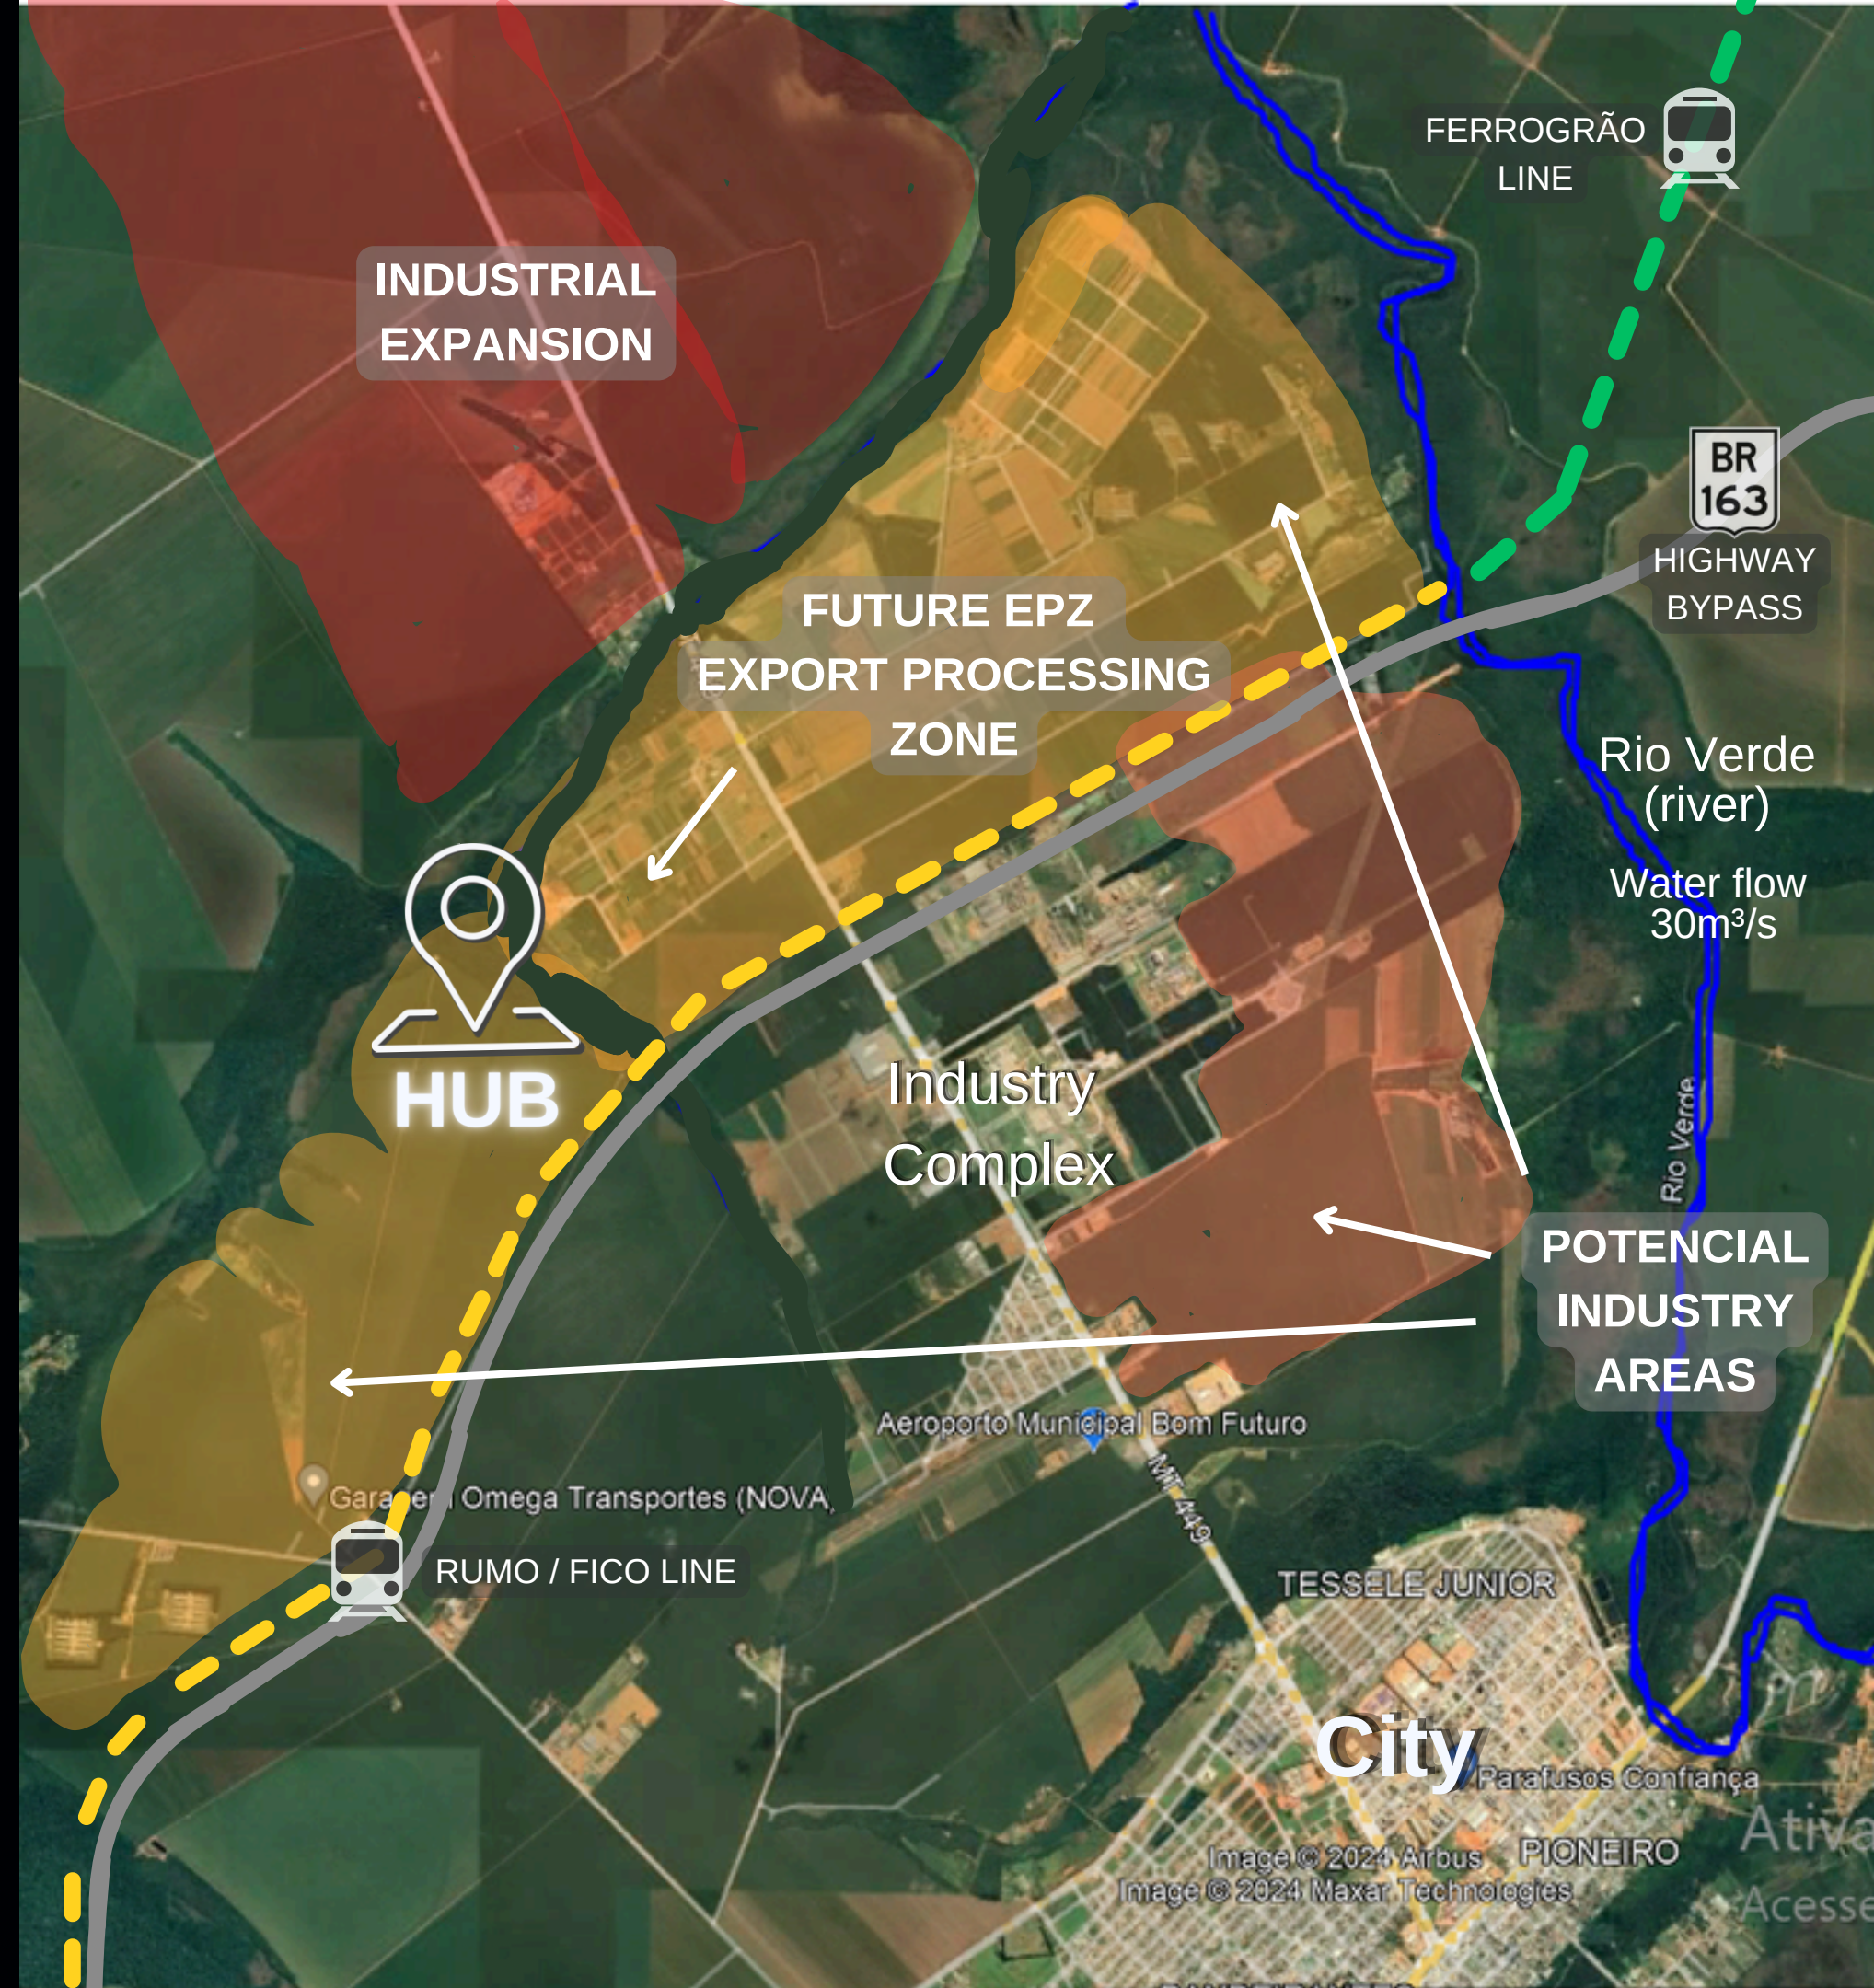

- 1** Considering the railways in the city, the municipality is already proposing changes to its master plan in order to guarantee the articulation of the railway lines and the duplication of the highway that gives access to the municipality, providing the capacity to increase production and flow of grains and already processed products.
- 2** The Export Processing Zone is planned to guarantee the final destination of commodities directly to ships for export using railways as a link.
- 3** The city's industrial district is located in a strategic position to guarantee access to watercourse for capturing and disposing of treated effluents according to industrial demands.

LRV RAIL HUB

Industrial Zone

The rail hub is strategically located within the city's industrial zone. The region features both municipal areas designated for business acceleration programs and private sites ideal for the implementation of high-impact industries.

LRV RAIL HUB

Opportunities

The rail hub represents a prime investment opportunity. Through this project, the municipality aims to secure funding and resources to directly support the development of future industrial and infrastructure projects.
