

Shaping the future together.

Making the move towards more sustainable practices goes hand-in-hand with any modern business management. PRINOTH produces the cleanest snow groomers and crawler carriers on the market as well as mulchers, attachments and tree trimmers that enable effective yet gentle vegetation management.

In addition to the vehicles equipped with state-of-the-art engine technology, PRINOTH introduced the world's first hydrogen-powered snow groomer and was first to put an electric snow groomer into series production. Our three business areas routinely share their knowledge on technologies such as these with each other. This synergistic way of working means customers can expect the most advanced, tried-and-tested products.

Integrating digital technology into operations is an essential step towards saving time, money and resources. PRINOTH's Connected Services connect vehicles and people with data. Fleet management and maintenance support tools help customers work more effectively and efficiently. They enable monitoring and optimization of vehicle operations, and can be installed in equipment from any manufacturer. Beyond that, PRINOTH's R&D teams are working to develop assistance functions for the next generation of automated and autonomous operations. The resulting technologies improve productivity, efficiency, safety and make operators' jobs easier.

Prinoth

YOUR SUCCESS IS OUR PASSION

With decades of experience in construction, snow grooming and vegetation management, PRINOTH develops vehicles and equipment for the most challenging conditions while increasing safety, reliability, sustainability and performance. As a member of the High Technology Industries (HTI) Group, PRINOTH is part of an organization specializing in winter sports, construction, urban transport, vegetation management and clean energy. This allows us to benefit from an international network of highly skilled teams.

Here for you.

At PRINOTH, service begins with product development. By integrating feedback from customers, PRINOTH identifies and develops solutions designed to fit their needs—including custom-built options. For inspections, repairs and maintenance, our customers can count on fast, flexible and expert support. Our online parts shop makes ordering PRINOTH genuine spare parts quick and convenient. In addition, with the PRINOTH Academy, operators and technicians learn to become experts in handling and maintaining our machines effectively and safely—whether it's a crawler carrier, mulcher or snow groomer, we have you covered.

VEGETATION MANAGEMENT

PRODUCTION IN HERDWANGEN, GERMANY
AND ST. PETER, UNITED STATES

RIGHT-OF-WAY
MAINTENANCE

PRINOTH offers a full line of vegetation management equipment known for exceptional quality, great stability and high productivity. The RAPTOR series carrier vehicles are equipped with the latest engine technology and run economically even at maximum power—saving fuel and costs. Combined with the M700 mulcher, the RAPTOR 500 has the perfect power-to-weight ratio enabling high maneuverability, ease of operation and low fuel consumption. Our mulching heads can be attached to a RAPTOR and many other vehicles such as skid steers, excavators and tractors—perfect for heavy-duty forestry work. The JARRAFF Tree Trimmer's industry exclusive 180° rotating saw head makes tree trimming a one-person job. Whether it's land clearing, right-of-way maintenance, removal of damaged timber, infrastructure measures, or biomass harvesting, PRINOTH offers specialized solutions for almost any application.

CRAWLER CARRIERS

PRODUCTION IN
GRANBY, CANADA

RIGHT-OF-WAY
MAINTENANCE

With large payloads, high speeds and a focus on safety, PRINOTH crawler carriers allow crews to work on off-road jobsites easily. The versatile PANTHER chassis can be equipped with a multitude of specialized attachments making it ideal for all types of operations: electric utility, construction, environmental restoration, oil and gas, and more. Exerting low ground pressure, our crawler carriers go places where wheeled vehicles sink or slide. A PANTHER is at home in rutted fields, muddy swamps and steep hills. The PANTHER T7R and T14R have a 360° continuous rotation of the upper portion, minimizing ground disturbance through reducing the need to turn while making the vehicle more productive. Equipped with state-of-the-art engines, PRINOTH crawler carriers are the cleanest fleet in the industry.

- ★ Headquarters in Northern Italy

RIGHT-OF-WAY
MAINTENANCE

Your entire **RIGHT-OF-WAY MAINTENANCE** with PRINOTH

Use the RAPTOR for land clearance, the PANTHER for construction, and the JARRAFF for maintenance

SNOW GROOMERS

PRODUCTION IN VIPITENO, ITALY
AND GRANBY, CANADA

Whether it's grooming slopes, laying cross-country tracks, maintaining snowmobile trails or constructing terrain parks, with their trademark finish and exceptional maneuverability, PRINOTH snow groomers are perfect for any application area. A combination of cutting-edge technology and extensive expertise enables cost-effective and high-quality snow grooming. In addition to vehicles with the latest engine technology, PRINOTH is first to commercially sell an electric snow groomer, the HUSKY eMOTION, and introduced the world's first hydrogen-powered snow groomer, the LEITWOLF h₂MOTION. Both vehicles deliver perfect slopes with zero emissions.
