06	Data safety	Overview

Save time and write comprehensible software requirements

The Problem

Creating software requirements is **time-consuming** and therefore **often not done correctly**. Ambiguities in requirements lead to **project delays** and **costly rework**.

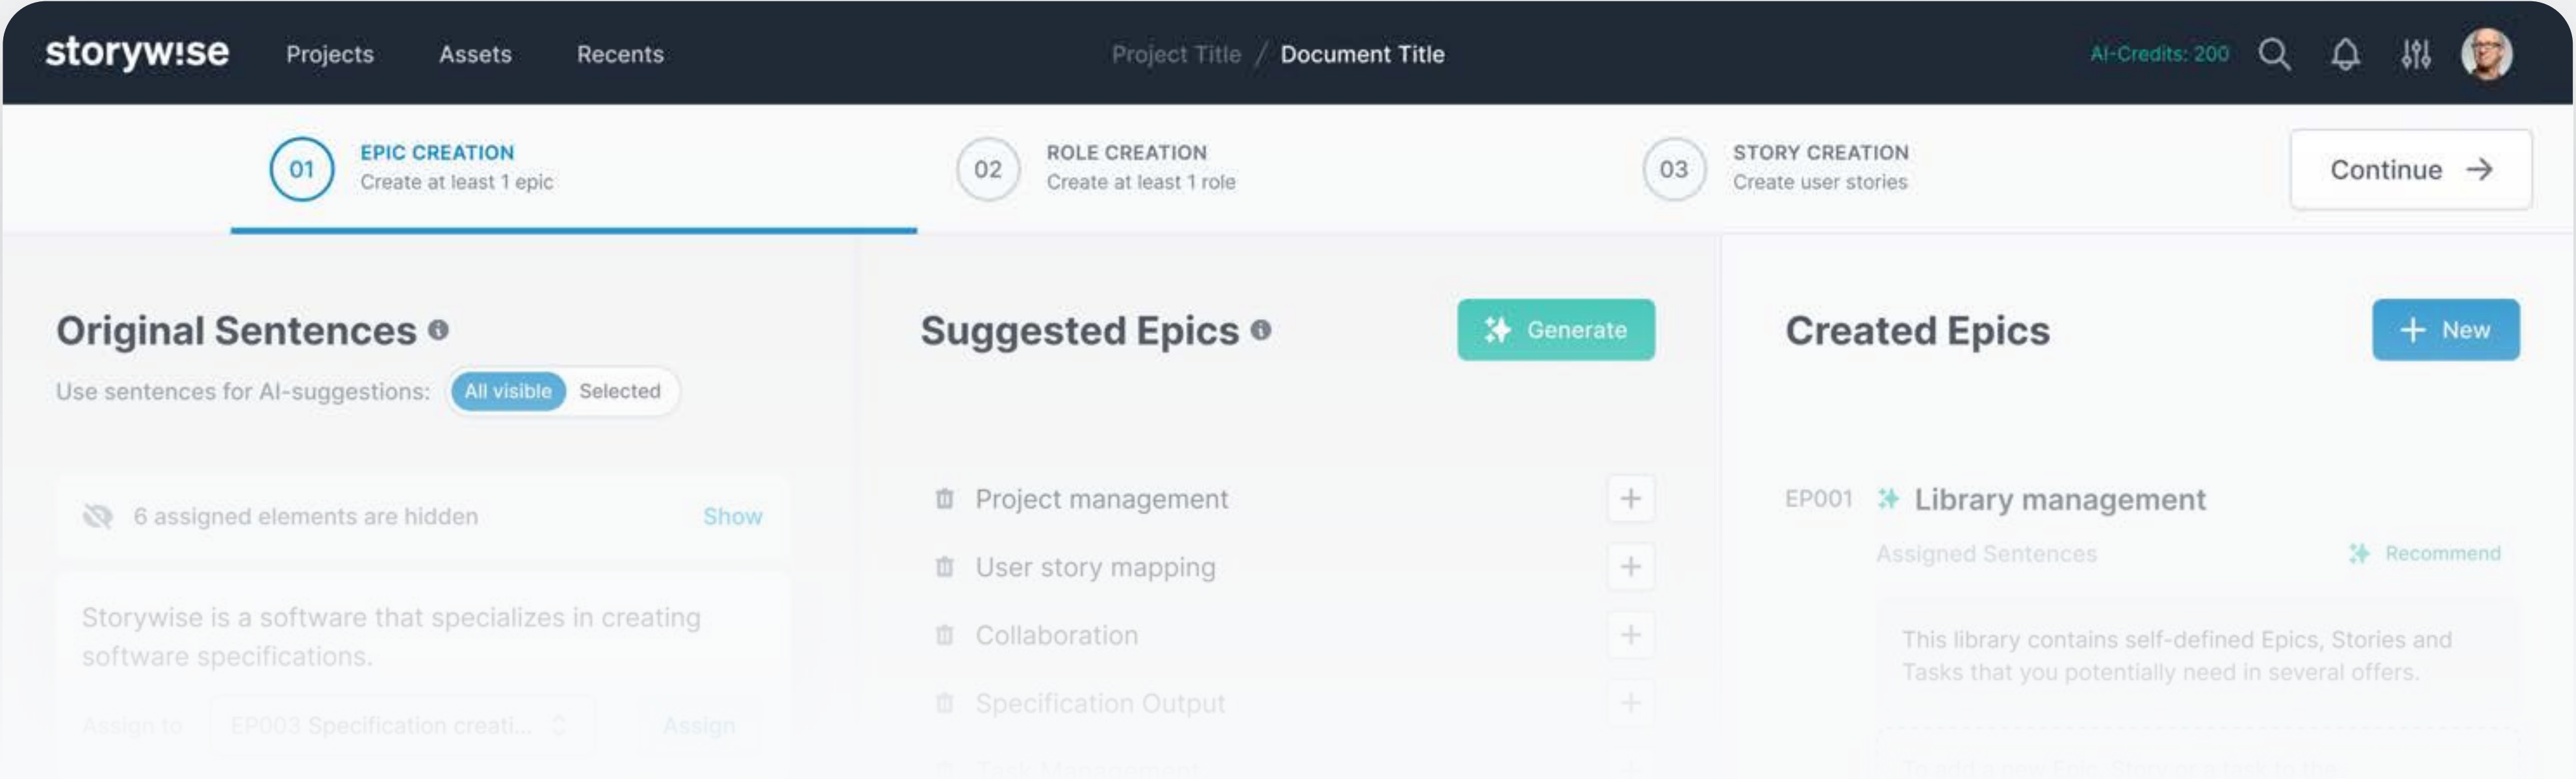

The Solution

storywise **streamlines the process, reduces errors, and helps create clear, comprehensive requirements**
– designed not to replace but to empower traditional project management tools.

Wizard

Go from plain text to refined specifications in minutes.

Let the storywise-AI do the heavy lifting for you

Convert text to stories

The storywise-AI creates your offer storywise.

Upload your [source material](#) and storywise will help you [identify relevant parts](#) – from epics to entities and personas. The [storywise AI](#) then [suggests user stories](#) for each sentence of the original text.

And the best thing is: [It really works](#) and helps you create specifications [significantly faster](#).

storywi.se ist ein intelligentes Software-Tool, das ändert, wie wir Software herstellen und entwickeln. Es ist vollgepackt mit hilfreichen Funktionen, die Ihre Arbeit schneller und einfacher machen. Eine wichtige Funktion ist eine spezielle Bibliothek. Diese Bibliothek enthält alle großen Ideen (die wir Epics nennen), kleinere Ideen (Stories) und sogar noch kleinere Aufgaben, die Sie erledigen müssen. Diese Bibliothek macht es schneller, Angebote zu erstellen, die gemeinsame Elemente haben. Es ist auch einfach, ein neues Epic, eine Story oder eine Aufgabe zur Bibliothek hinzuzufügen, so dass Sie sie später verwenden können. **storywi.se verfügt auch über ein tolles Canvas-Tool.** Dies ist wie eine große, gemeinsame Karte aller Ihrer Epics, Stories und Aufgaben. Jeder kann gleichzeitig daran arbeiten und Updates sofort sehen. verbunden sind. Es ermöglicht es Ihnen auch, schnell zwischen Stories zu wechseln und neue hinzuzufügen, wo immer dies erforderlich ist. Aber das ist nicht alles. storywi.se verwendet intelligente Technologie, genannt KI, um neue Stories auf Basis Ihrer vorhandenen Stories vorzuschlagen. Dies hilft Ihnen, neue Funktionen zu denken, die Ihnen entgangen sein könnten. Die KI kann sogar Stories vorschlagen, die Sie vielleicht nicht brauchen, was für

Create Project

Generate epics & assign Sentences

The storywise-AI suggests Epics based upon information identified in the original sentences. Easily assign sentences to created Epics through automatic recommendations.

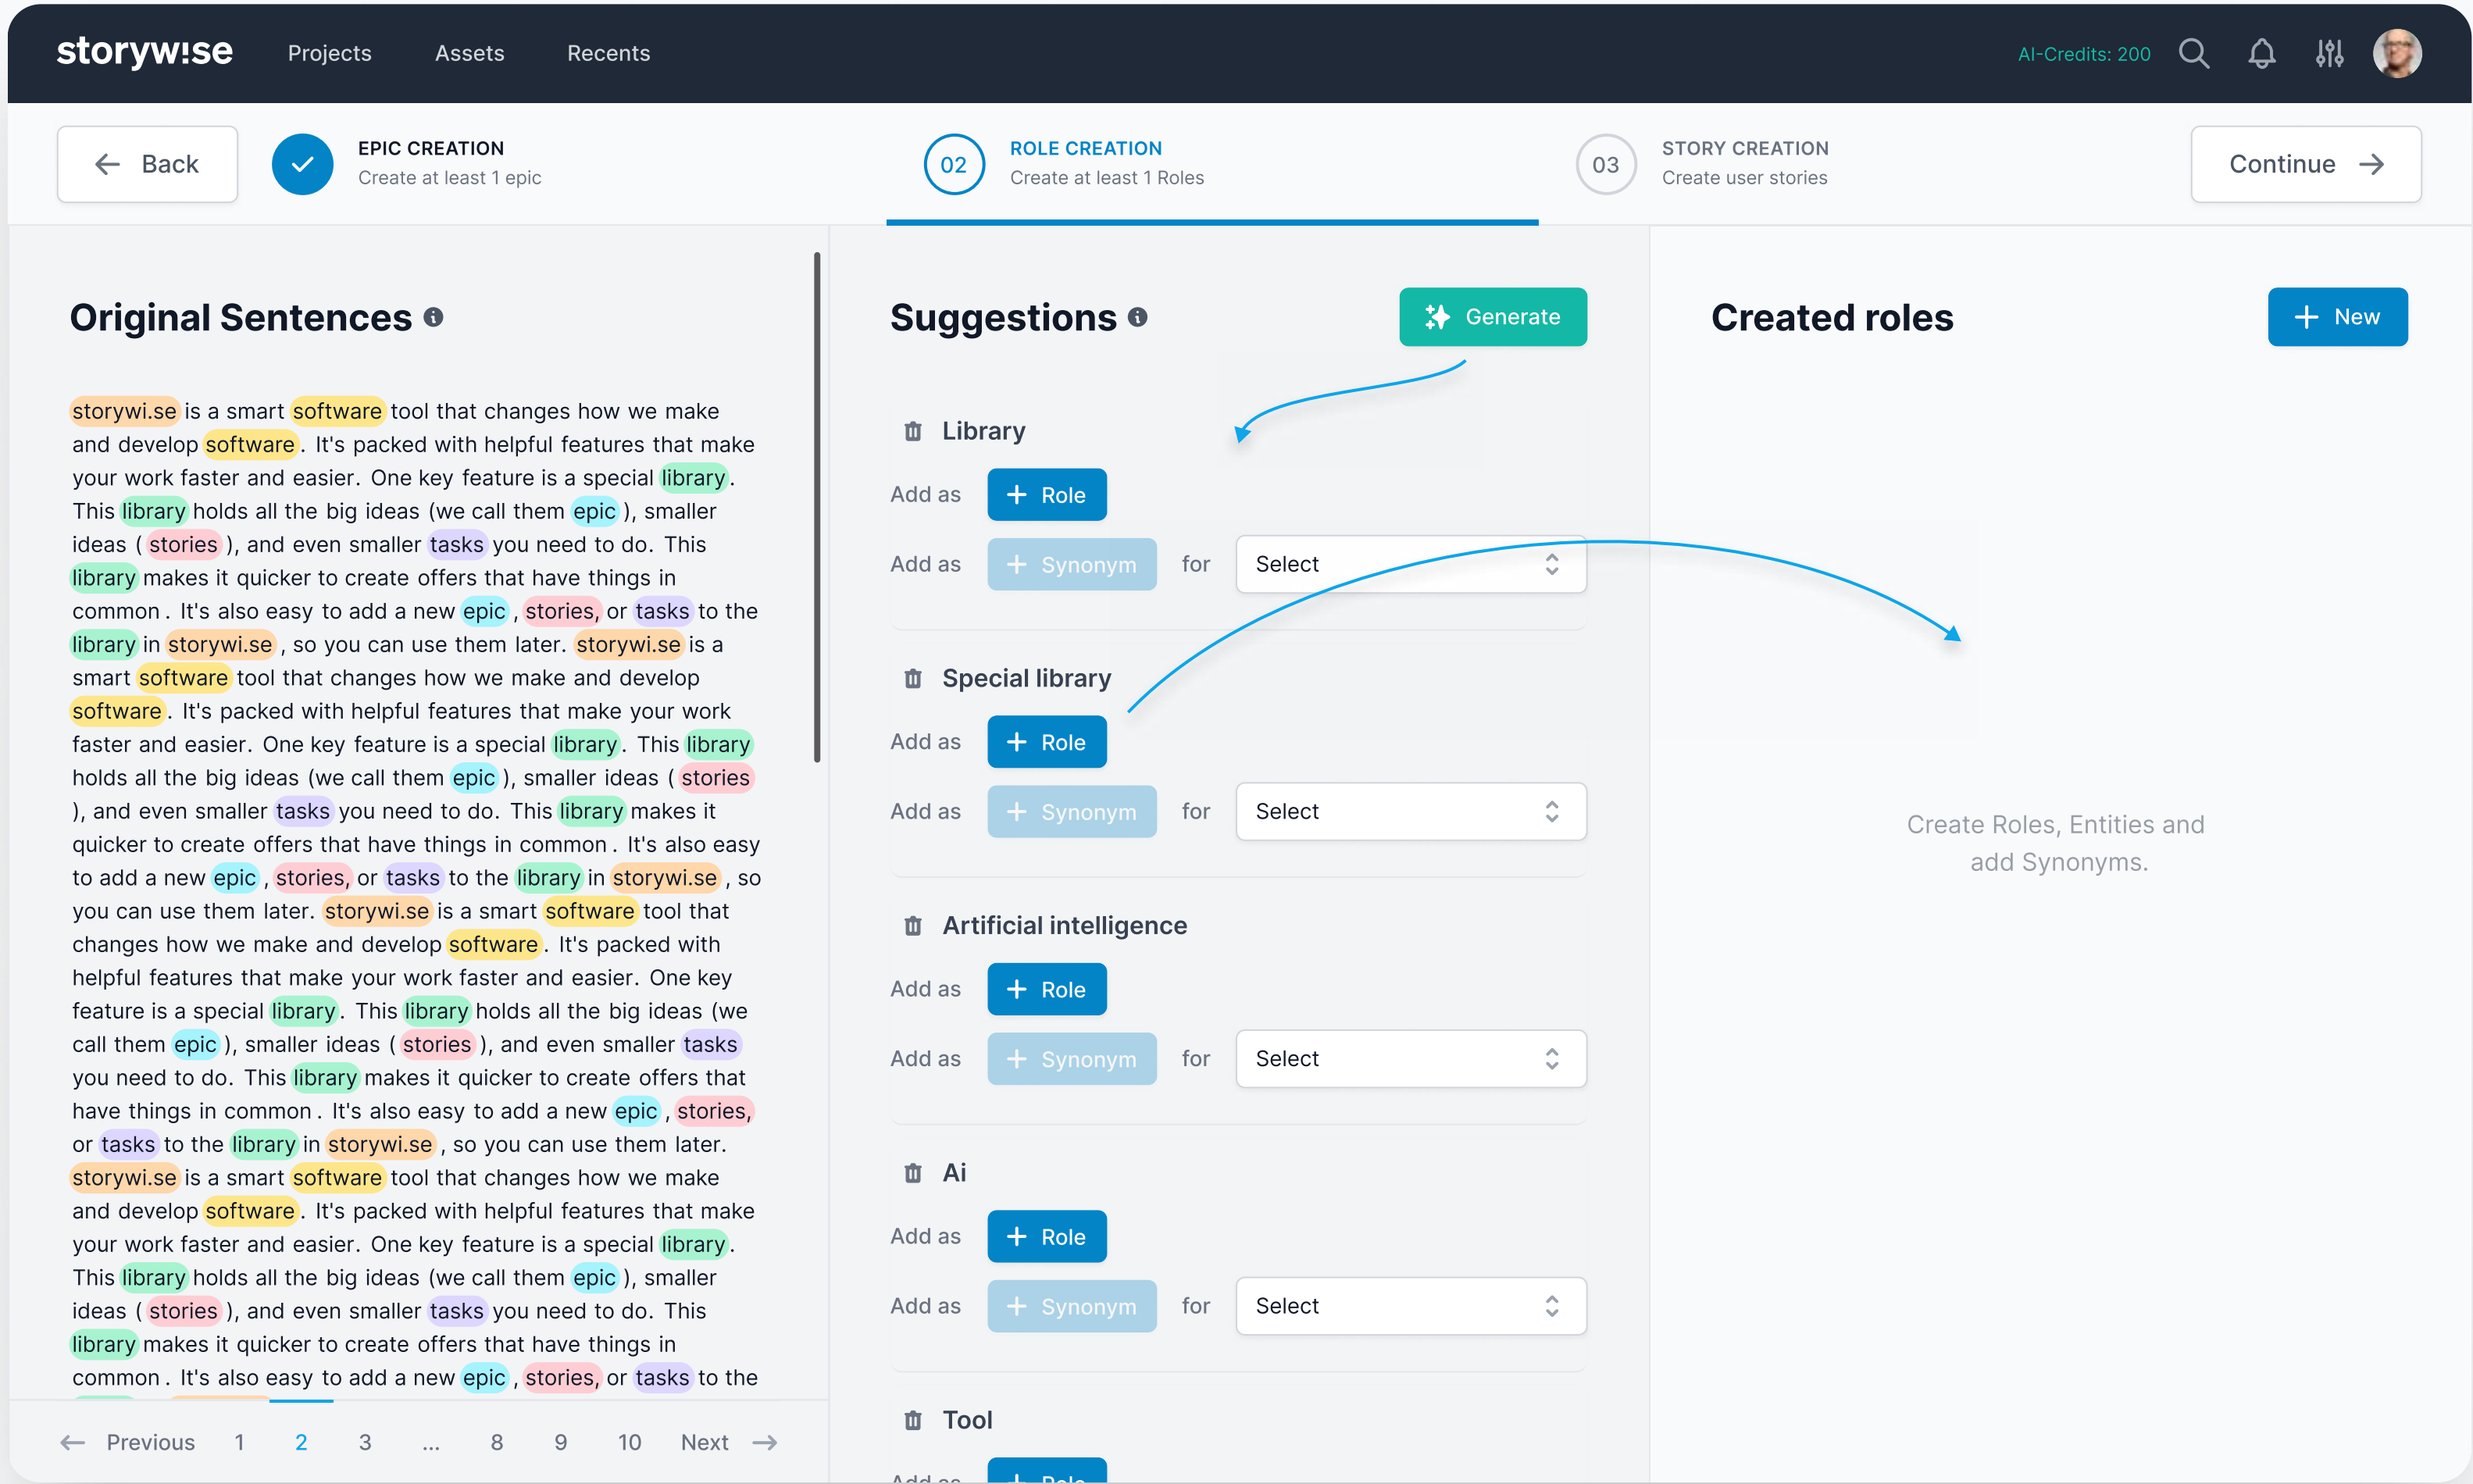

- Analysis of **any kind of description** of the target product
- Each original sentence is linked to a related epic, creating a **clear structure**

User validation

storywise identifies relevant roles within the uploaded text.

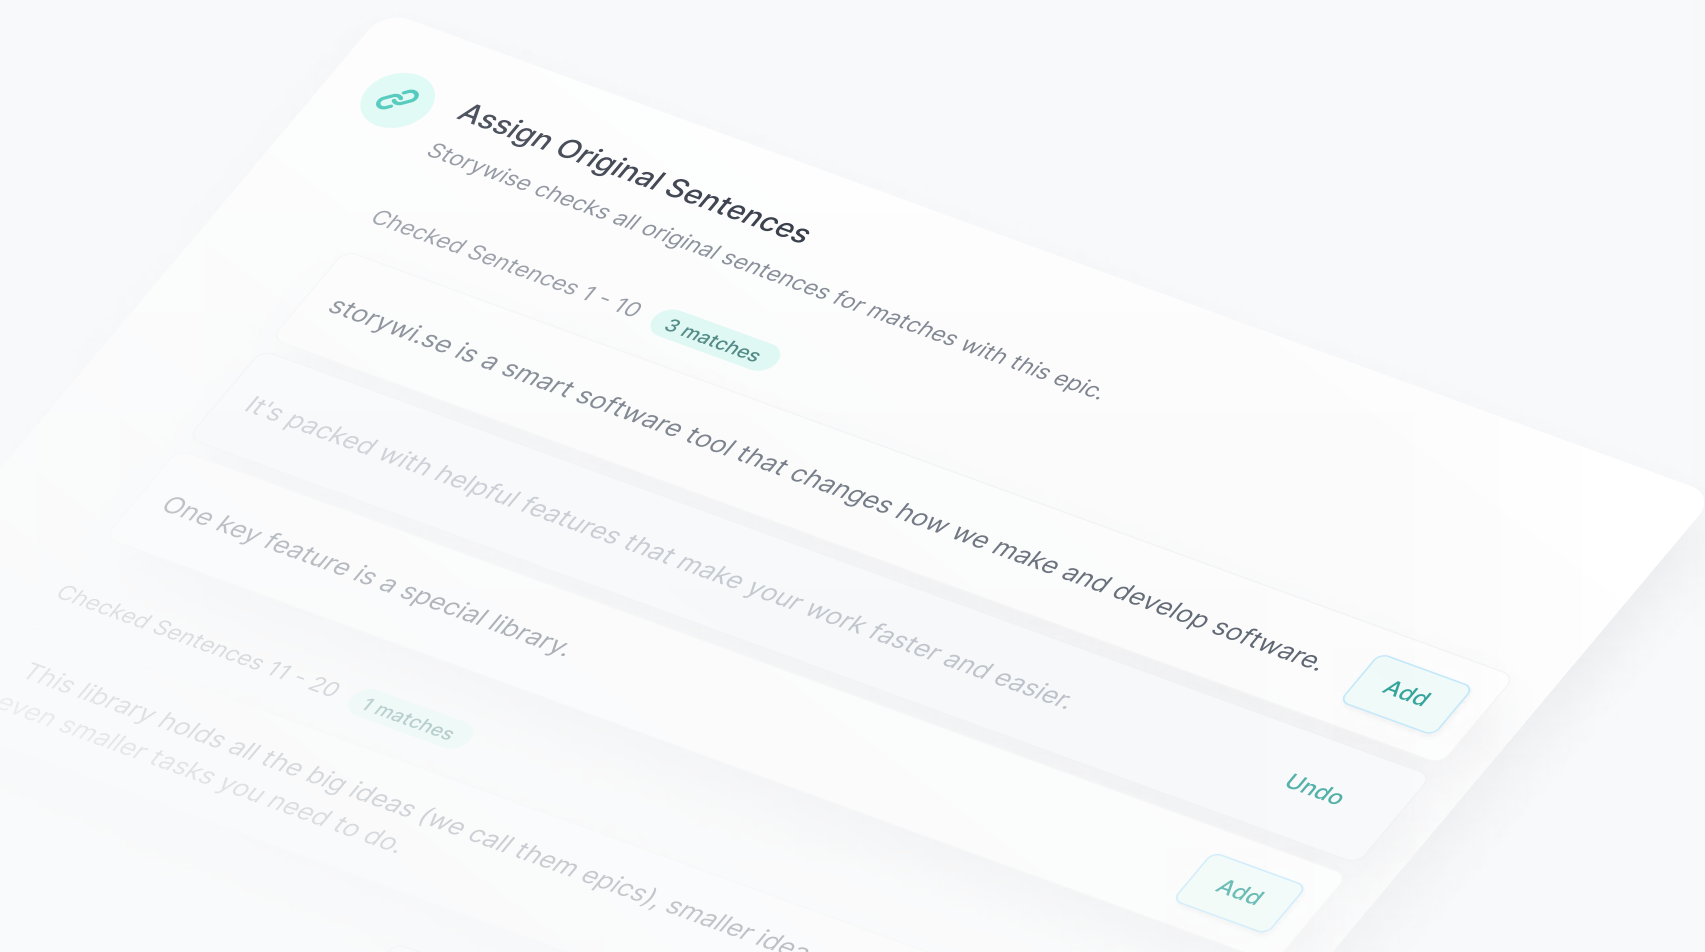

- Assignment of additional terms to the roles as synonyms

Create stories

storywise proposes user stories out of the original sentences by rephrasing them into the proper syntax.

- **Assignment** of original sentences to corresponding stories **via AI-recommendations**
- Ensures thorough consideration of every sentence from the customer's description

Convert text to stories

Overview

Our AI helps to detect entities and create stories out of the source text while keeping relevant references.

Text analysis and division into epics

- Analysis of [any kind of description](#) of the target product.
- Each of those original sentences is linked to a related epic, creating a clear structure.

User validation and synonym identification

- Identification of [all relevant roles](#) throughout the original description.
- Assignment of additional terms to the roles as [synonyms](#).

Sentence utilization

- storywise [formulates user stories](#) out of the original sentences.
- next it proposes the [assignment of original sentences](#) to the corresponding stories.
- this ensures thorough consideration of [every sentence](#) from the customer's description

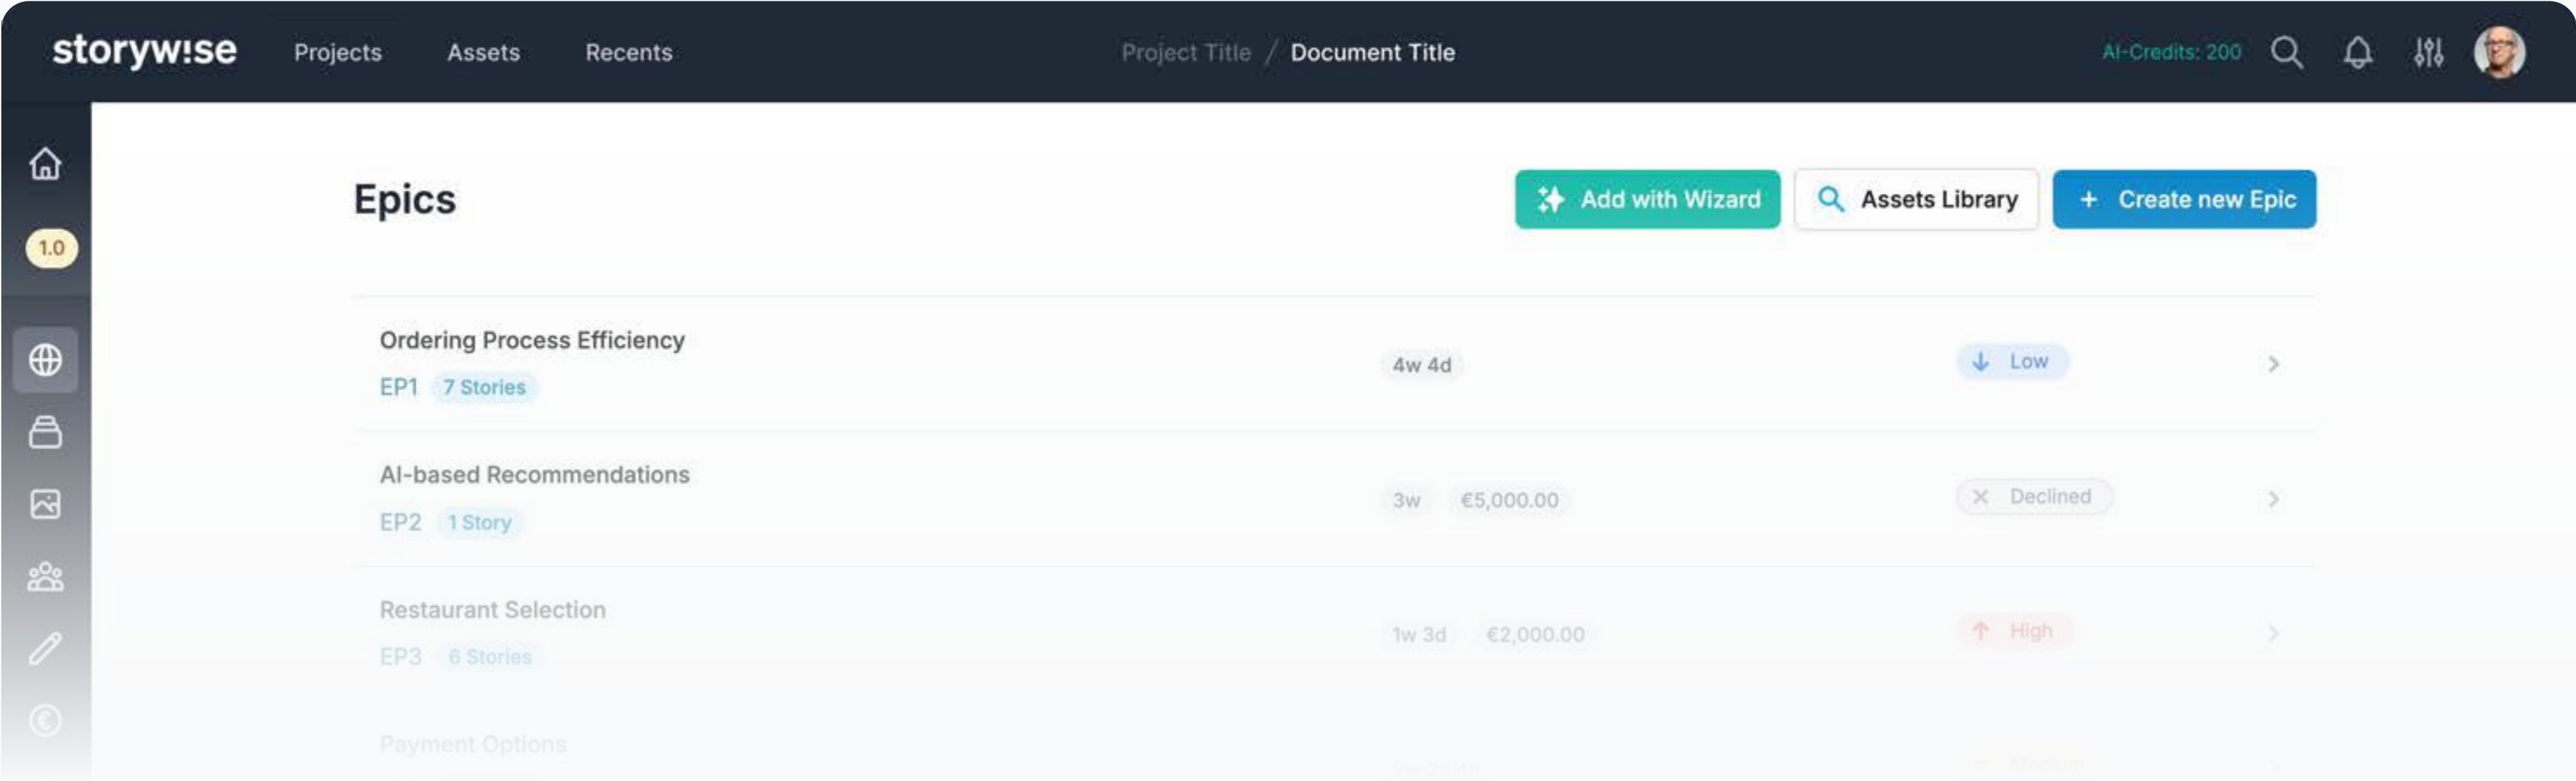

Maintain traceability

- Throughout this process storywise makes sure to [maintain traceability efficiently](#).
- This makes the acceptance process quick and effortless.

AI recommendations

Generate new user stories on the fly and don't miss anything

Propose missing stories

Propose missing stories

Our AI analyses your stories and **proposes additional stories**, that you might have missed, based on the existing stories.

Proactive feature suggestion

- storywise utilizes [AI technology](#) to suggest additional stories based on other included user stories.
- These suggestions help prevent overlooking or forgetting [essential aspects](#) during the specification phase.
- Early consideration of proposed features avoids complications from complex additions later in the development process.

Exclusion awareness

- AI proposes stories for [inclusion](#) and [exclusion](#).
- Awareness of potential exclusions allows for [explicit documentation](#).
- [Prevents confusion](#) about excluded stories in the future.

Enhanced mutual understanding

- storywise provides a [comprehensive view](#) of the final product.
- Enhances [mutual understanding](#) between purchasing agents and engineers.
- Leads to [better-aligned expectations](#) and smoother development.

Data can easily be structured within storywise.

This enables you to calculate robust totals, group tasks and stories together and communicate the correct acceptance criterias in a breeze.

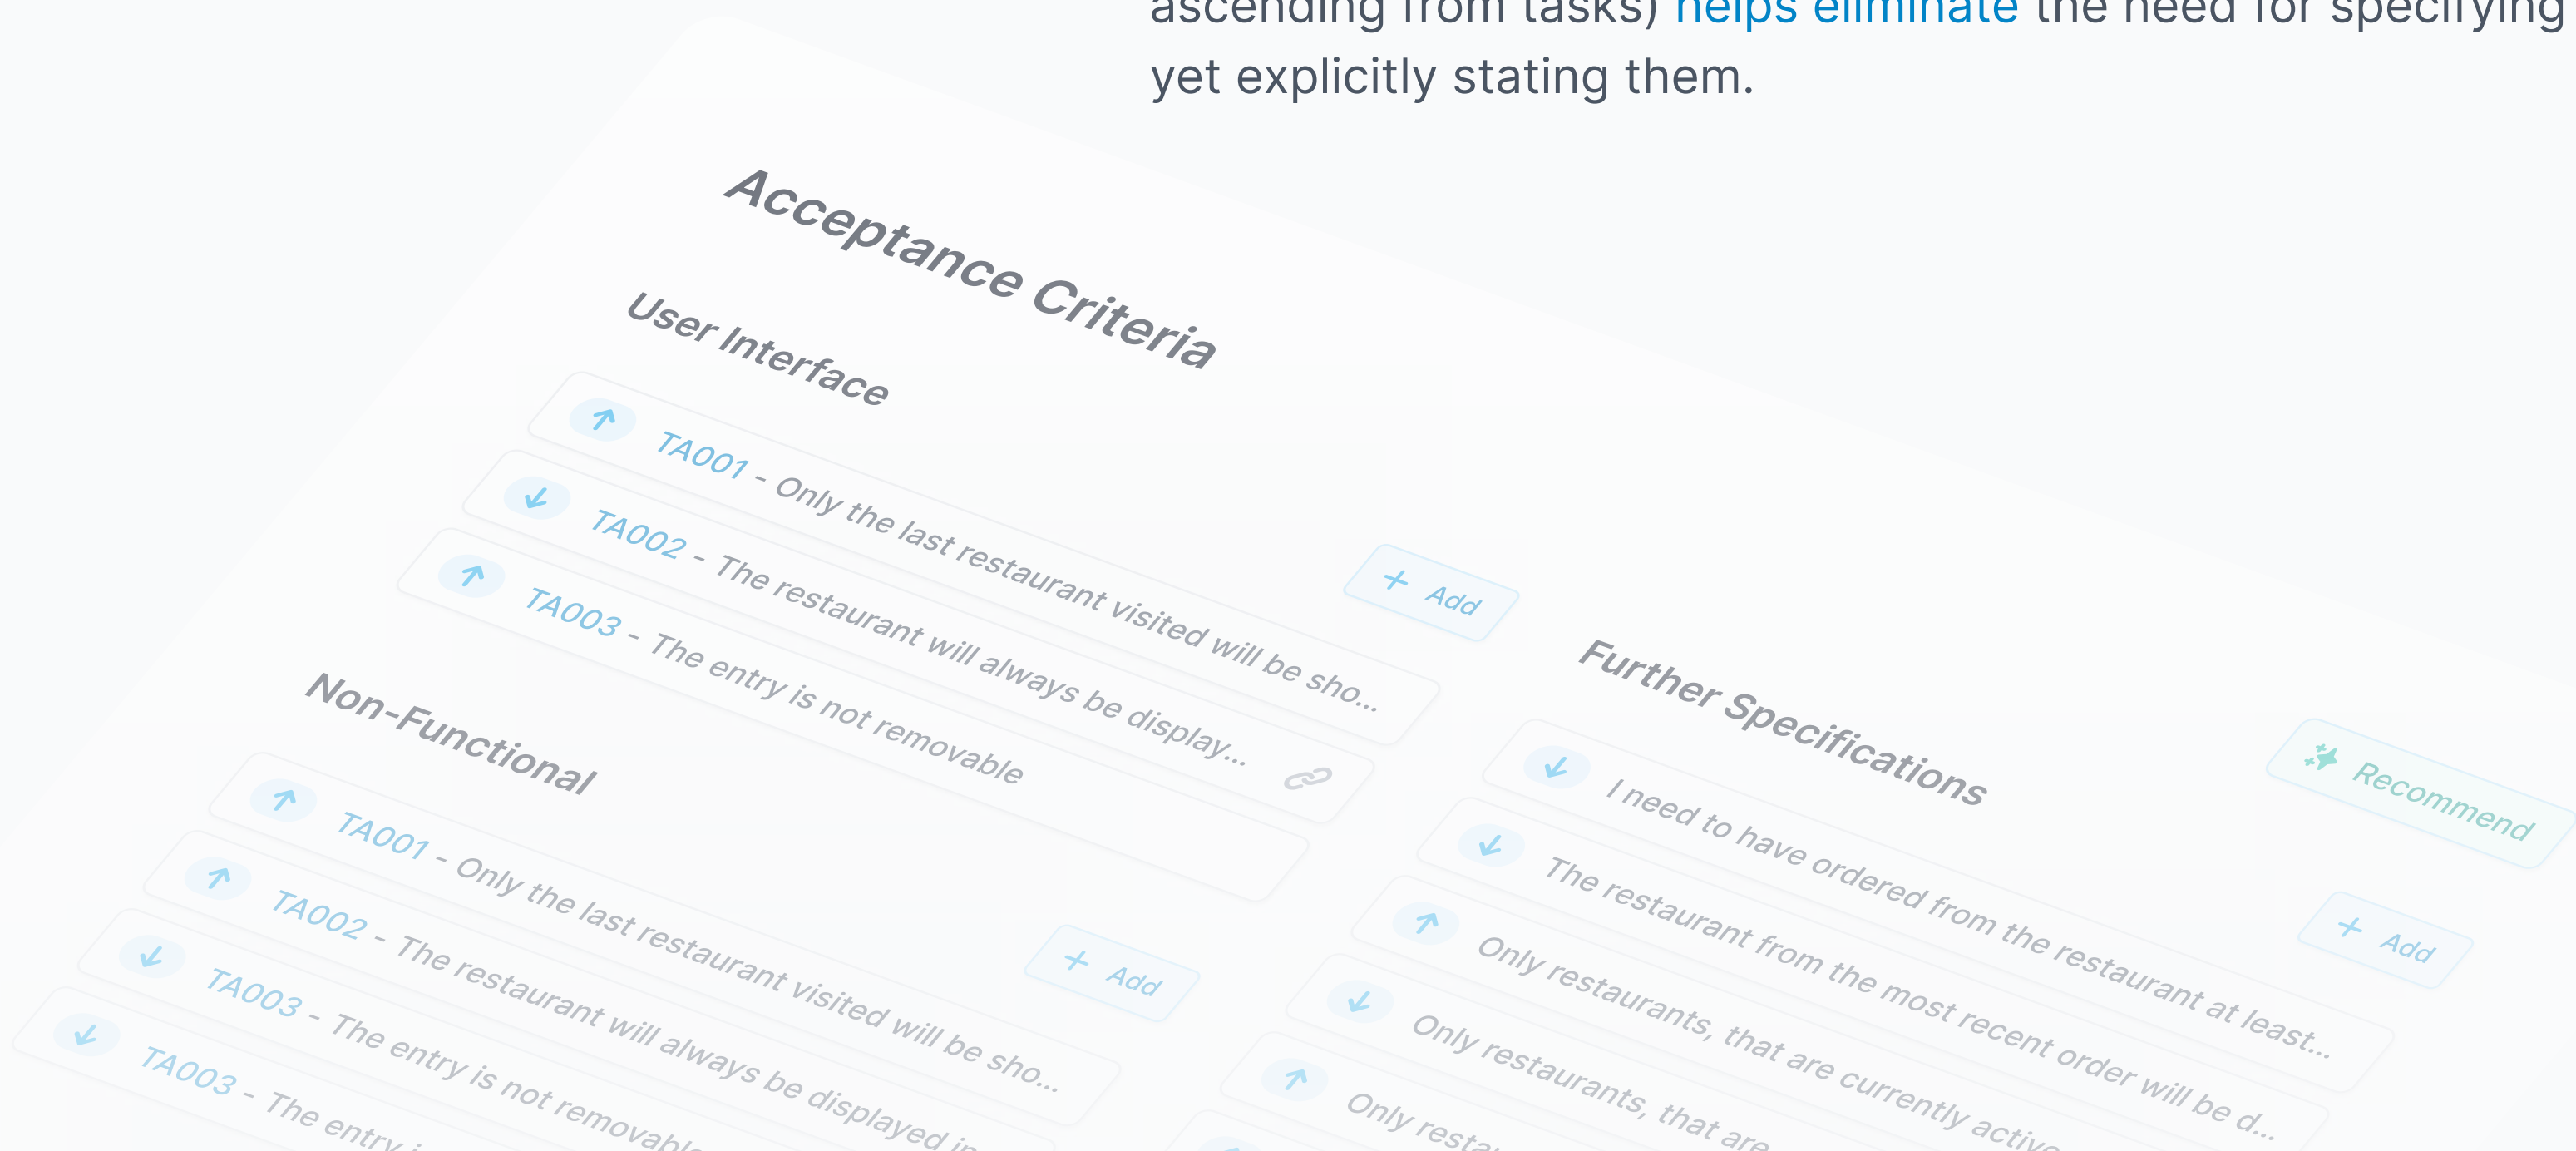

Structured data storage

- A library helps with the [reuse of recurring](#) parts (e.g. a check-out process).
- Tasks, stories or entire epics can be stored here and can be loaded at the click of a button.

Inheritance of acceptance criteria

- The inheritability of acceptance criteria (descending from epics to tasks and ascending from tasks) [helps eliminate](#) the need for specifying criterias repeatedly, yet explicitly stating them.

Thanks to the standardized way the data is processed within storywise it is possible to make different offers fully compareable.

Comparison of specification documents

- Compare multiple [versions](#) and [offers](#).
- Reuse parts of offers and link features to be turned on and off in the offer comparison, while the system automatically calculates the correct price.

Transparency in costs for providers

- Clarify the [origins of cost](#) to customers.
- [Clearly communicate](#) levers that can be turned to alter the price.

Offer comparisons for companies and public institutions

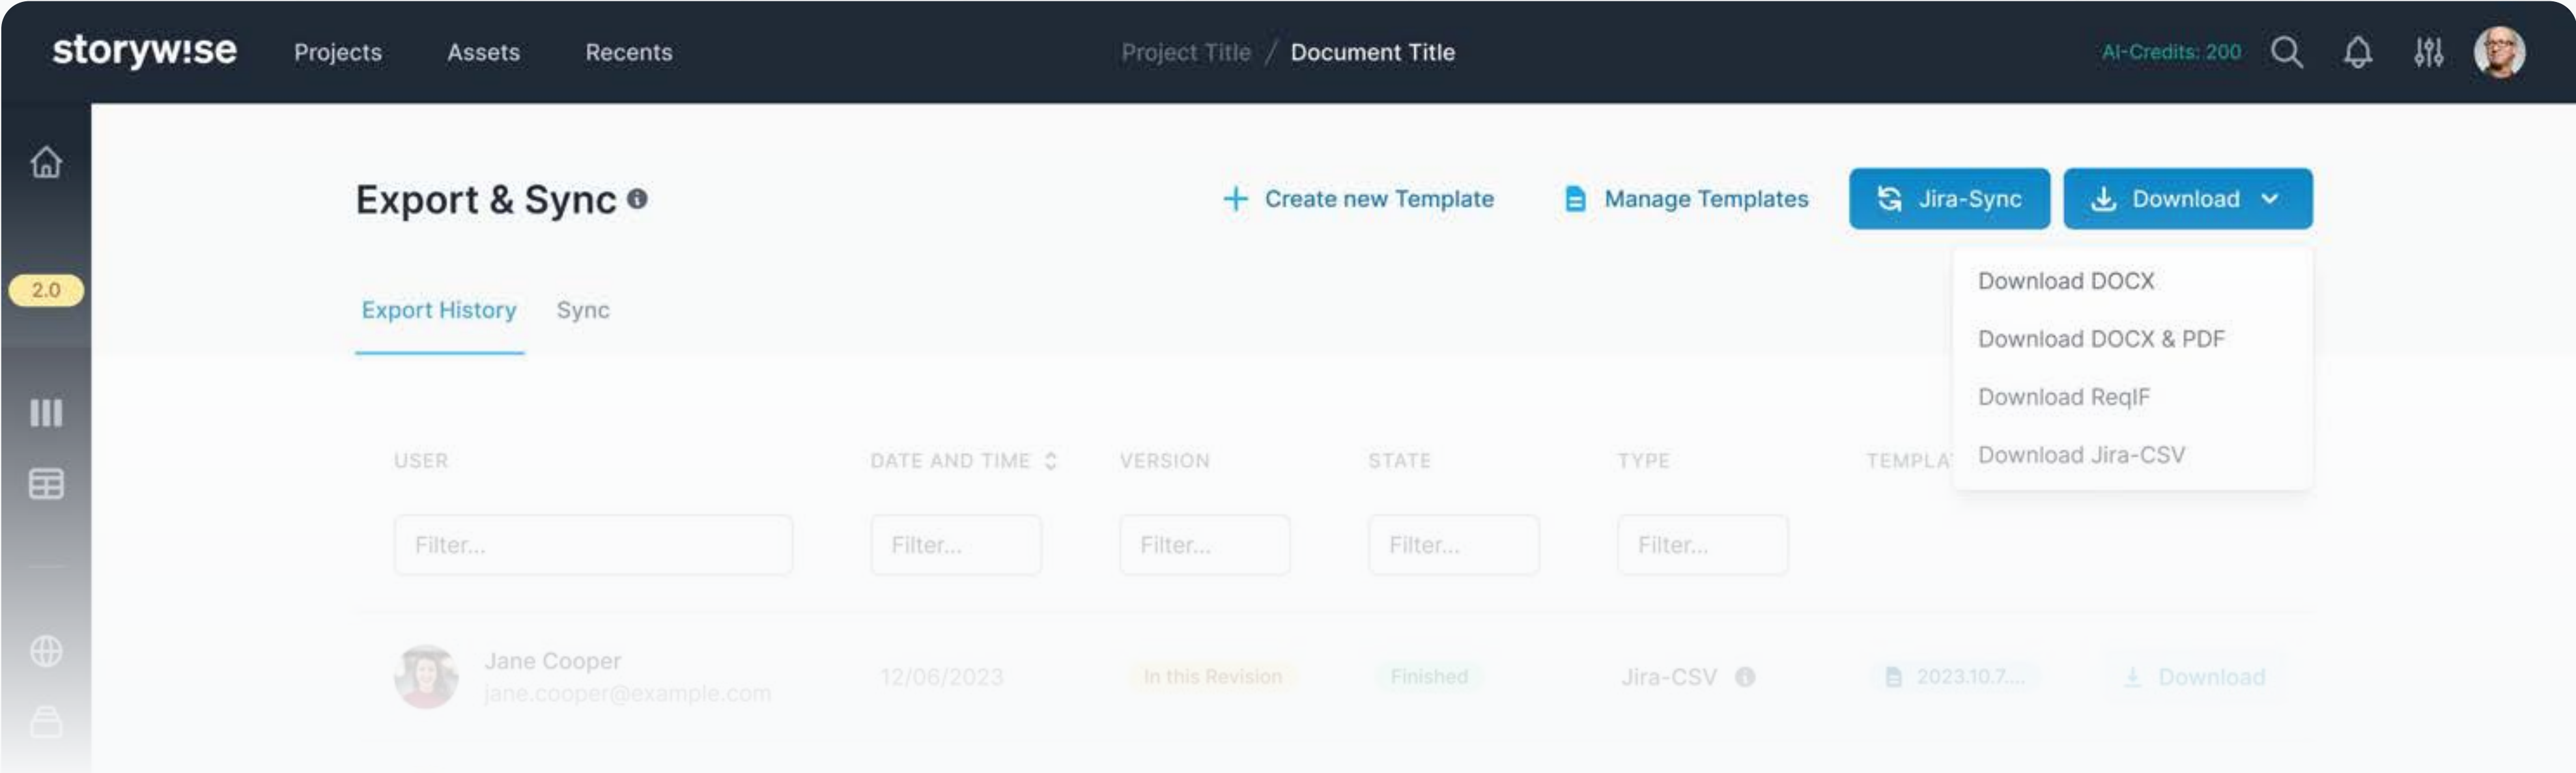

- [Directly compare offers](#) on a truly even ground.
- There is no other software known to us that specifically enables comparisons for software.

Export Documentation

Quickly generate comprehensive documentation

1-click exports

1-click exports

Transform your project into a professional requirements document.

With a highly configurable export format it is a breeze to create understanding for the work needed to finish the project.

1-click exports

Directly sync to Jira and get your devs on board in no time.

Choose between three modes and filter
epics to synchronize only what is needed.

Choose synchronization mode

Only synchronize new epics/stories/tasks

In this mode, only the epics/stories/tasks that have been added since the last synchronization will be transferred to Jira.

Synchronize new epics/stories/tasks and update content

In this mode, the epics/stories/tasks that have been added since the last synchronization will be transferred to Jira and the content of existing items will be updated - e.g. names, descriptions, acceptance criteria, screens, and links.

Delete and re-synchronize

In this mode, all previously transferred stories will be deleted and completely re-transferred.
