VALTA

engineering

Welcome! We are your engineering office for product development.

We believe that in today's complex and global economy, every business can ensure its resilience against strong and rapidly growing market competition only through continuous innovation and smooth improvement of its products. The shortening lifespan of products poses challenges for businesses to optimally deploy their capacities. Due to effective resource utilization, it is necessary to economically align product development and production methods as best as possible.

Our philosophy

We bring together inspiration, experience, and opportunities offered by the connected and open world. Northern Europe inspires us with simplicity, practicality, and purity of expression. German corporations have given us the opportunity to understand functional processes and methods. Slovakia provides us with hardworking and creative individuals close to the integrated production ecosystem.

Process

For years, our team from Munich and Košice has been supporting international companies in product development. We can also help you turn your idea into reality and optimize it. We develop products for demanding everyday operations, striving to achieve the maximum in terms of cost, functionality, and emotions.

Product design

Development

Reverse engineering

Rapid prototyping

Industrialization

Approach us with your project!

Your idea is the first step on the long journey towards the goal. The quality, innovation, and expertise applied at every step of the product development process will determine the outcome of your project.

Take the right step. We have decided to support your first step with an initial consultation for free.
