Key technology stack

Web

| HTML | TypeScript | ReactJS | Angular | CSS | MySQL | JavaScript | Vue.js | Ruby on Rails |

IOS

| Swift | Objective-C | SwiftUI | CloudKit |

Cross-platform

| Ionic | NativeScript | React Native |

Android

| Java | Kotlin |

UI/UX design

| Figma | Principle | Sketch | Invision |

Project management

| Slack | Jira | Confluence |

Quality assurance

| Firebase | TestFlight |

Expertise

1 Startup companies

- Desk research & expert market analysis;
- Marketing support;
- Building a development strategy;
- Developing pitch-decks, landing pages;
- Creating clickable prototypes.

2 Big data

- Creating effective big data management systems;
- Innovative tools to process of a huge data amount;
- Processing transactional real-time, streaming;
- Data mining;
- Predictive and statistical analysis;
- Vizualization of analytical data.

3 Geolocation and mapping

- Location and position tracking;
- Detailed and updated maps;
- Finding services and places nearby;
- Notifications based on user location;
- Data filtering and synchronizing.

4 IoT and smart solutions

- Convenient onboarding process;
- Managing and adjusting the sensors and devices;
- Voice assisatant integration;
- Air quality monitoring;
- Leak detection and control;
- Energy consumption monitoring.

Expertise

5 Video on demand

- Watching video live or on demand;
- Broadcasting from web or mobile interface;
- Integration user accounts with external resources;
- Chatting and interacting with users;
- Gathering feedback from the audience.

7 Healthcare and fitness

- Tracking different physical and vital signs;
- Finding the nearest centers of medical care;
- The medical emergency call;
- Monitoring medical instructions and prescriptions;
- Integration of social networks.

6 Marketplaces

- Advanced search system;
- Wishlists and discounts to encourage users to buy;
- Social media integration;
- Details statistics and analytics;
- Flexible and secure payment solution.

8 Hotels and restaurants

- Booking feature;
- making pre-orders without any hassle;
- Wish cards, discounts, and user engagement;
- Convenient access to news and information;
- Sharing reviews using social networks.

Project management and delivery warranties

Before starting a project, we carry out careful preparation and comprehensive evaluation of risks and associated impacts.

- ✓ Documents in accordance with the legislation, transparency in financial matters and accounting;

- ✓ Feature breakdown file with the detailed scope of work and its evaluation;

- ✓ Project planning documentation including Gantt schedule for the whole project;

- ✓ System architecture diagram describing the relationship between different components of the system;

- ✓ R&D of all third-party services.

Project management and delivery warranties

For complex projects and after-launch development period (maintenance and support) we use Time & Materials engagement model.
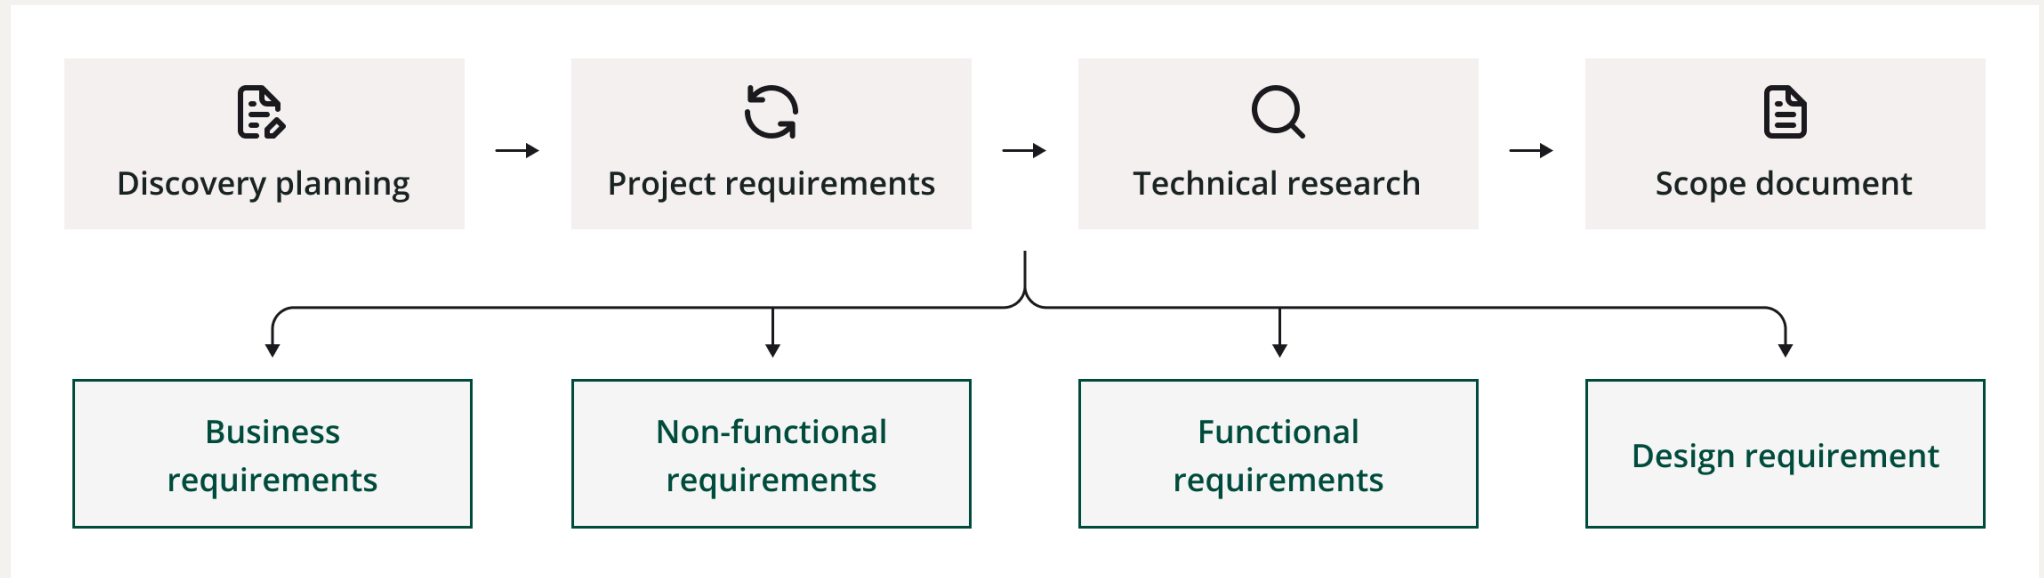

Working process:

- Documents in accordance with the legislation, transparency in financial matters and accounting;

- Format of two-week sprints (creating a sprint task list - reporting on the completed features and sharing deliverables);

- Providing to client with 2 accounts for Jira and Confluence free of charge to monitor the progress and get necessary reports.

Maintenance & support:

- System updates (iOS and Android operating system updates, 3rd party libraries or frameworks updates);

- DevOps and server infrastructure maintenance;

- New features implementation.

Discovery phase

Discovery planning	→	Project requirements	→	Technical research	→	Scope document

| Business requirements	Non-functional requirements	Functional requirements	Design requirement

Deliverables:

- Written requirements (both owners and agency acknowledge the scope of work, validate the business idea, review possible competitors, etc.);

- UX visualization of the future product to make sure we keep all necessary details together;

- The technical confirmation of the project implementation possibility (list of the integration, data availability, services cost & usage);

- Suggesting the ways to keep prices low while maintaining the quality;
